Contents

1 The Liquid Drop Model 1

1.1 Introduction 1
1.2 The Semi-empirical Mass Formula 2
1.3 Deformation Parameters 5
1.4 Surface Oscillations About a Spherical Shape 9
1.5 Rotations and Vibrations for Deformed Shapes 17
1.5.1 The Bohr Hamiltonian 17
1.5.2 The Axially Symmetric Case 22
1.5.3 The Asymmetric Rotor 26
1.6 Nuclear Fission 28
1.7 Stability of Rotating Liquid Drops 32

2 The Shell Model 36

2.1 Introduction and General Considerations 36
2.2 Experimental Evidence for Shell Effects 37
2.3 The Average Potential of the Nucleus 38
2.4 Spin Orbit Coupling 42
2.5 The Shell Model Approach to the Many-Body Problem 45
2.6 Symmetry Properties 50
2.6.1 Translational Symmetry 50

2.6.2 Rotational Symmetry 51
2.6.3 The Isotopic Spin 53
2.7 Comparison with Experiment 56
2.7.1 Experimental Evidence for Single-Particle (Hole) States 56
2.7.2 Electromagnetic Moments and Transitions 60
2.8 Deformed Shell Model 65
2.8.1 Experimental Evidence 65
2.8.2 General Deformed Potential 67
2.8.3 The Anisotropic Harmonic Oscillator 68
2.8.4 Nilsson Hamiltonian 70
2.8.5 Quantum Numbers of the Ground State in Odd Nuclei 78
2.8.6 Calculation of Deformation Energies 79
2.9 Shell Corrections to the Liquid Drop Model and the Strutinski Method 83
2.9.1 Introduction 83
2.9.2 Basic Ideas of the Strutinski Averaging Method 84
2.9.3 Determination of the Average Level Density 86
2.9.4 Strutinski's Shell Correction Energy 89
2.9.5 Shell Corrections and the Hartree–Fock Method 92
2.9.6 Some Applications 95

3 Rotation and Single-Particle Motion 96

3.1 Introduction 96
3.2 General Survey 97
3.2.1 Experimental Observation of High Spin States 97
3.2.2 The Structure of the Yrast Line 99
3.2.3 Phenomenological Classification of the Yrast Band 103
3.2.4 The Backbending Phenomenon 104
3.3 The Particle-plus-Rotor Model 107
3.3.1 The Case of Axial Symmetry 109
3.3.2 Some Applications of the Particle-plus-Rotor Model 119
3.3.3 The triaxial Particle-plus-Rotor Model 122
3.3.4 Electromagnetic Properties 125
3.4 The Cranking Model 126
3.4.1 Semiclassical Derivation of the Cranking Model 127
3.4.2 The Cranking Formula 130
3.4.3 The Rotating Anisotropic Harmonic Oscillator 133
3.4.4 The Rotating Nilsson Scheme 137
3.4.5 The Deformation Energy Surface at High Angular Momenta 139

3.4.6 Rotation about a Symmetry Axis 142
3.4.7 Yrast Traps 143

4 Nuclear Forces **147**

4.1 Introduction 147
4.2 The Bare Nucleon–Nucleon Force 149
4.2.1 General Properties of a Two-Body Force 149
4.2.2 The Structure of the Nucleon–Nucleon Interaction 153
4.3 Microscopic Effective Interactions 156
4.3.1 Brückner's *G*-Matrix and Bethe Goldstone Equation 156
4.3.2 Effective Interactions between Valence Nucleons 164
4.3.3 Effective Interactions between Particles and Holes 170
4.4 Phenomenological Effective Interactions 172
4.4.1 General Remarks 172
4.4.2 Simple Central Forces 174
4.4.3 The Skyrme Interaction 175
4.4.4 The Gogny Interaction 176
4.4.5 The Migdal Force 177
4.4.6 The Surface-Delta Interaction (SDI) 179
4.4.7 Separable Forces and Multipole Expansions 180
4.4.8 Experimentally Determined Effective Interactions 185
4.5 Concluding Remarks 187

5 The Hartree–Fock Method **189**

5.1 Introduction 189
5.2 The General Variational Principle 190
5.3 The Derivation of the Hartree-Fock Equation 192
5.3.1 The Choice of the Set of Trial Wave Functions 192
5.3.2 The Hartree–Fock Energy 194
5.3.3 Variation of the Energy 194
5.3.4 The Hartree–Fock Equations in Coordinate Space 196
5.4 The Hartree–Fock Method in a Simple Solvable Model 197
5.5 The Hartree–Fock Method and Symmetries 201
5.6 Hartree–Fock with Density Dependent Forces 203
5.6.1 Approach with Microscopic Effective Interactions 203
5.6.2 Hartree–Fock Calculations with the Skyrme Force 208
5.7 Concluding Remarks 215

6 Pairing Correlations and Superfluid Nuclei 217

6.1 Introduction and Experimental Survey 217
6.2 The Seniority Scheme 221
6.3 The BCS Model 228
6.3.1 The Wave Function 228
6.3.2 The BCS Equations 230
6.3.3 The Special Case of a Pure Pairing Force 232
6.3.4 Bogoliubov Quasi-particles—Excited States and Blocking 234
6.3.5 Discussion of the Gap Equation 238
6.3.6 Schematic Solution of the Gap Equation 240

7 The Generalized Single-Particle Model (HFB Theory) 244

7.1 Introduction 244
7.2 The General Bogoliubov Transformation 245
7.2.1 Quasi-particle Operators 245
7.2.2 The Quasi-particle Vacuum 249
7.2.3 The Density Matrix and the Pairing Tensor 251
7.3 The Hartree–Fock–Bogoliubov Equations 252
7.3.1 Derivation of the HFB Equation 252
7.3.2 Properties of the HFB Equations 255
7.3.3 The Gradient Method 258
7.4 The Pairing-plus-Quadrupole Model 259
7.5 Applications of the HFB Theory for Ground State Properties 262
7.6 Constrained Hartree–Fock Theory (CHF) 266
7.7 HFB Theory in the Rotating Frame (SCC) 271

8 Harmonic Vibrations 280

8.1 Introduction 280
8.2 Tamm–Dancoff Method 282
8.2.1 Tamm–Dancoff Secular Equation 282
8.2.2 The Schematic Model 285
8.2.3 Particle–Particle (Hole–Hole) Tamm–Dancoff Method 288
8.3 General Considerations for Collective Modes 289
8.3.1 Vibrations in Quantum Mechanics 289
8.3.2 Classification of Collective Modes 290
8.3.3 Discussion of Some Collective *ph*-Vibrations 293
8.3.4 Analog Resonances 297
8.3.5 Pairing Vibrations 299
8.4 Particle–Hole Theory with Ground State Correlations (RPA) 301

8.4.1 Derivation of the RPA Equations 301
8.4.2 Stability of the RPA 305
8.4.3 Normalization and Closure Relations 305
8.4.4 Numerical Solution of the RPA Equations 306
8.4.5 Representation by Boson Operators 307
8.4.6 Construction of the RPA Ground State 310
8.4.7 Invariances and Spurious Solutions 311
8.5 Linear Response Theory 314
8.5.1 Derivation of the Linear Response Equations 315
8.5.2 Calculation of Excitation Probabilities and Schematic Model 319
8.5.3 The Static Polarizability and the Moment of Inertia 321
8.5.4 RPA Equations in the Continuum 322
8.6 Applications and Comparison with Experiment 325
8.6.1 Particle–Hole Calculations in a Phenomenological Basis 325
8.6.2 Particle–Hole Calculations in a Self-Consistent Basis 328
8.7 Sum Rules 330
8.7.1 Sum Rules as Energy Weighted Moments of the Strength Functions 330
8.7.2 The S_1-Sum Rule and the RPA Approach 331
8.7.3 Evaluation of the Sum Rules S_1, S_{-1}, and S_3 332
8.7.4 Sum Rules and Polarizabilities 335
8.7.5 Calculation of Transition Currents and Densities 335
8.8 Particle–Particle RPA 339
8.8.1 The Formalism 339
8.8.2 Ground State Correlations Induced by Pairing Vibrations 341
8.9 Quasi-particle RPA 343

9 Boson Expansion Methods 346

9.1 Introduction 346
9.2 Boson Representations in Even–Even Nuclei 348
9.2.1 Boson Representations of the Angular Momentum Operators 348
9.2.2 Concepts for Boson Expansions 351
9.2.3 The Boson Expansion of Belyaev and Zelevinski 354
9.2.4 The Boson Expansion of Marumori 362
9.2.5 The Boson Expansion of Dyson 367
9.2.6 The Mathematical Background 368
9.2.7 Methods Based on *pp*-Bosons 372

9.2.8 Applications 375
9.3 Odd Mass Nuclei and Particle Vibration Coupling 381
9.3.1 Boson Expansion for Odd Mass Systems 382
9.3.2 Derivation of the Particle Vibration Coupling (Bohr) Hamiltonian 383
9.3.3 Particle Vibration Coupling (Perturbation Theory) 385
9.3.4 The Nature of the Particle Vibration Coupling Vertex 387
9.3.5 Effective Charges 389
9.3.6 Intermediate Coupling and Dyson's Boson Expansion 390
9.3.7 Other Particle Vibration Coupling Calculations 395
9.3.8 Weak Coupling in Even Systems 397

10 The Generator Coordinate Method 398

10.1 Introduction 398
10.2 The General Concept 399
10.2.1 The GCM Ansatz for the Wave Function 399
10.2.2 The Determination of the Weight Function *f(a)* 401
10.2.3 Methods of Numerical Solution of the HW Equation 404
10.3 The Lipkin Model as an Example 405
10.4 The Generator Coordinate Method and Boson Expansions 406
10.5 The One-Dimensional Harmonic Oscillator 409
10.6 Complex Generator Coordinates 411
10.6.1 The Bargman Space 411
10.6.2 The Schrödinger Equation 413
10.6.3 Gaussian Wave Packets in the Harmonic Oscillator 414
10.6.4 Double Projection 418
10.7 Derivation of a Collective Hamiltonian 419
10.7.1 General Considerations 419
10.7.2 The Symmetric Moment Expansion (SME) 420
10.7.3 The Local Approximation (LA) 423
10.7.4 The Gaussian Overlap Approximation (GOAL) 424
10.7.5 The Lipkin Model 428
10.7.6 The Multidimensional Case 430
10.8 The Choice of the Collective Coordinate 430
10.9 Application of the Generator Coordinate Method for Bound States 433
10.9.1 Giant Resonances 433
10.9.2 Pairing Vibrations 435

11 Restoration of Broken Symmetries 438

11.1 Introduction 438
11.2 Symmetry Violation in the Mean Field Theory 441
11.3 Transformation to an Intrinsic System 451
11.3.1 General Concepts 451
11.3.2 Translational Motion 454
11.3.3 Rotational Motion 457
11.4 Projection Methods 458
11.4.1 Projection Operators 458
11.4.2 Projection Before and After the Variation 460
11.4.3 Particle Number Projection 463
11.4.4 Approximate Projection for Large Deformations 466
11.4.5 The Inertial Parameters 470
11.4.6 Angular Momentum Projection 473
11.4.7 The Structure of the Intrinsic Wave Functions 482

12 The Time Dependent Hartree–Fock Method (TDHF) 485

12.1 Introduction 485
12.2 The Full Time-Dependent Hartree–Fock Theory 486
12.2.1 Derivation of the TDHF Equation 486
12.2.2 Properties of the TDHF Equation 489
12.2.3 Quasi-static Solutions 492
12.2.4 General Discussion of the TDHF Method 493
12.2.5 An Exactly Soluble Model 499
12.2.6 Applications of the TDHF Theory 500
12.3 Adiabatic Time-Dependent Hartree–Fock Theory (ATDHF) 505
12.3.1 The ATDHF Equations 505
12.3.2 The Collective Hamiltonian 510
12.3.3 Reduction to a Few Collective Coordinates 513
12.3.4 The Choice of the Collective Coordinates 516
12.3.5 General Discussion of the Atdhf Methods 519
12.3.6 Applications of the ATDHF Method 521
12.3.7 Adiabatic Perturbation Theory and the Cranking Formula 523

13 Semiclassical Methods in Nuclear Physics 527

13.1 Introduction 527
13.2 The Static Case 528
13.2.1 The Thomas–Fermi Theory 528
13.2.2 Wigner–Kirkwood $\hbar$-Expansion 534

13.2.3 Partial Resummation of the $\hbar$-Expansion 545
13.2.4 The Saddle Point Method 547
13.2.5 Application to a Sperical Woods–Saxon Potential 549
13.2.6 Semiclassical Treatment of Pairing Properties 550
13.3 The Dynamic Case 552
13.3.1 The Boltzmann Equation 553
13.3.2 Fluid Dynamic Equations from the Boltzmann Equation 555
13.3.3 Application of Ordinary Fluid Dynamics to Nuclei 558
13.3.4 Variational Derivation of Fluid Dynamics 562
13.3.5 Momentum Distribution of the Density ρ_0 564
13.3.6 Imposed Fluid Dynamic Motion 568
13.3.7 An Illustrative Example 573

APPENDICES

A Angular Momentum Algebra in the Laboratory and the Body-Fixed System 575

B Electromagnetic Moments and Transitions 580

B.1 The General Form of the Hamiltonian 580
B.2 Static Multipole Moments 581
B.3 The Multipole Expansion of the Radiation Field 584
B.4 Multipole Transitions 587
B.5 Single-Particle Matrix Elements in a Spherical Basis 591
B.6 Translational Invariance and Electromagnetic Transitions 592
B.7 The Cross Section for the Absorption of Dipole Radiation 593

C Second Quantization 595

C.1 Creation and Annihilation Operators 595
C.2 Field Operators in the Coordinate Space 598
C.3 Representation of Operators 599
C.4 Wick's Theorem 601

D Density Matrices 603

D.1 Normal Densities 603
D.2 Densities of Slater Determinants 605
D.3 Densities of BCS and HFB States 608
D.4 The Wigner Transformation of the Density Matrix 609

E Theorems Concerning Product Wave Functions 611

E.1 The Bloch–Messiah Theorem [BM 62] 611
E.2 Operators in the Quasi-particle Space 613
E.3 Thouless' Theorem 615
E.4 The Onishi Formula 618
E.5 Bogoliubov Transformations for Bosons 620

F Many-Body Green's Functions 623

F.1 Single-Particle Green's Function and Dyson's Equation 623
F.2 Perturbation Theory 628
F.3 Skeleton Expansion 631
F.4 Factorization and Brückner–Hartree–Fock 632
F.5 Hartree–Fock–Bogoliubov Equations 634
F.6 The Bethe–Salpeter Equation and Effective Forces 640

Bibliography 643
