## Part I Partial Differential Equations in Finance

---

<b>1</b>	<b>Introduction</b>	3
1.1	Assets	3
1.2	Derivative Securities	8
1.2.1	Forward and Futures Contracts	9
1.2.2	Options	10
1.2.3	Interest Rate Derivatives	13
1.2.4	Factors Affecting Derivative Prices	13
1.2.5	Functions of Derivative Securities	14
	Problems	15
<b>2</b>	<b>Basic Options</b>	17
2.1	Asset Price Model and Itô's Lemma	17
2.1.1	A Model for Asset Prices	17
2.1.2	Itô's Lemma	20
2.1.3	Expectation and Variance of Lognormal Random Variables	22
2.2	Derivation of the Black-Scholes Equation	25
2.2.1	Arbitrage Arguments	25
2.2.2	The Black-Scholes Equation	26
2.2.3	Final Conditions for the Black-Scholes Equation	29
2.2.4	Hedging and Greeks	30
2.3	Two Transformations on the Black-Scholes Equation	32
2.3.1	Converting the Black-Scholes Equation into a Heat Equation	32
2.3.2	Transforming the Black-Scholes Equation into an Equation Defined on a Finite Domain	35
2.4	Solutions of European Options	39
2.4.1	The Solutions of Parabolic Equations	39
2.4.2	Solutions of the Black-Scholes Equation	42

2.4.3	Prices of Forward Contracts and Delivery Prices . . . . .	44
2.4.4	Derivation of the Black–Scholes Formulae . . . . .	44
2.4.5	Put–Call Parity Relation . . . . .	48
2.4.6	An Explanation in Terms of Probability . . . . .	49
2.5	American Option Problems as LC Problems . . . . .	51
2.5.1	Constraints on American Options . . . . .	51
2.5.2	Formulation of the Linear Complementarity Problem in $(S, t)$ -Plane . . . . .	52
2.5.3	Formulation of the Linear Complementarity Problem in $(x, \bar{\tau})$ -Plane . . . . .	58
2.5.4	Formulation of the Linear Complementarity Problem on a Finite Domain . . . . .	60
2.5.5	More General Form of the Linear Complementarity Problems . . . . .	61
2.6	American Option Problems as FBPs . . . . .	62
2.6.1	Free Boundaries . . . . .	62
2.6.2	Free-Boundary Problems . . . . .	67
2.6.3	Put–Call Symmetry Relations . . . . .	70
2.7	Equations for Some Greeks . . . . .	75
2.8	Perpetual Options . . . . .	77
2.9	General Equations for Derivatives . . . . .	78
2.9.1	Models for Random Variables . . . . .	79
2.9.2	Generalization of Itô’s Lemma . . . . .	81
2.9.3	Derivation of Equations for Financial Derivatives . . . . .	82
2.9.4	Three Types of State Variables . . . . .	84
2.9.5	Uniqueness of Solutions . . . . .	85
2.10	Jump Conditions . . . . .	90
2.10.1	Hyperbolic Equations with a Dirac Delta Function . . . . .	90
2.10.2	Jump Conditions for Options with Discrete Dividends and Discrete Sampling . . . . .	91
2.11	More Arbitrage Theory . . . . .	92
2.11.1	Three Conclusions and Some Portfolios . . . . .	92
2.11.2	Bounds of Option Prices . . . . .	94
2.11.3	Relations Between Call and Put Prices . . . . .	97
	Problems . . . . .	100
<b>3</b>	<b>Exotic Options . . . . .</b>	<b>113</b>
3.1	Introduction . . . . .	113
3.2	Barrier Options . . . . .	114
3.2.1	Knock-out and Knock-in Options . . . . .	114
3.2.2	Closed-Form Solutions of Some European Barrier Options . . . . .	115
3.2.3	Formulation of American Barrier Options . . . . .	121
3.2.4	Parisian Options . . . . .	122
3.3	Asian Options . . . . .	126

3.3.1	Average Strike, Average Price and Double Average Options . . . . .	126
3.3.2	Continuously and Discretely Sampled Arithmetic Averages . . . . .	127
3.3.3	Derivation of Equations . . . . .	129
3.3.4	Reducing to One-Dimensional Problems . . . . .	130
3.3.5	Jump Conditions . . . . .	133
3.3.6	American Asian Options . . . . .	133
3.3.7	Some Examples . . . . .	136
3.4	Lookback Options . . . . .	138
3.4.1	Equations for Lookback Options . . . . .	138
3.4.2	Reducing to One-Dimensional Problems . . . . .	143
3.4.3	Closed-Form Solutions for European Lookback Options . . . . .	145
3.4.4	American Options Formulated as Free-Boundary Problems . . . . .	152
3.4.5	A Closed-Form Solution for a Perpetual American Lookback Option . . . . .	154
3.4.6	Lookback-Asian Options . . . . .	156
3.4.7	Some Examples . . . . .	159
3.5	Multi-Asset Options . . . . .	161
3.5.1	Equations for Multi-Asset Options and Green's Formula . . . . .	161
3.5.2	Exchange Options . . . . .	166
3.5.3	Options on the Extremum of Several Assets . . . . .	168
3.5.4	Formulation of Multi-Asset Option Problems on a Finite Domain . . . . .	178
3.6	Some Other Exotic Options . . . . .	182
3.6.1	Binary Options . . . . .	183
3.6.2	Forward Start Options (Delayed Strike Options) . . . . .	183
3.6.3	Compound Options . . . . .	184
3.6.4	Chooser Options . . . . .	190
	Problems . . . . .	191
<b>4</b>	<b>Interest Rate Derivative Securities . . . . .</b>	<b>205</b>
4.1	Introduction . . . . .	205
4.2	Bonds . . . . .	208
4.2.1	Bond Values for Deterministic Spot Rates . . . . .	208
4.2.2	Bond Equations for Random Spot Rates . . . . .	210
4.3	Some Explicit Solutions of Bond Equations . . . . .	211
4.3.1	Analytic Solutions for the Vasicek and Cox–Ingersoll–Ross Models . . . . .	212
4.3.2	Explicit Solutions for the Ho–Lee and Hull–White Models . . . . .	218
4.4	Inverse Problem on the Market Price of Risk . . . . .	220
4.5	Application of Bond Equations . . . . .	223
4.5.1	Bond Options and Bond Futures Contract Options . . . . .	223

4.5.2	Interest Rate Swaps and Swaptions	226
4.5.3	Interest Rate Caps, Floors and Collars	233
4.6	Multi-Factor Interest Rate Models	235
4.6.1	Brief Description of Several Multi-Factor Interest Rate Models	235
4.6.2	Reducing the Randomness of a Zero-Coupon Bond Curve to That of a Few Zero-Coupon Bonds	237
4.6.3	A Three-Factor Interest Rate Model and the Equation for Interest Rate Derivatives	241
4.7	Two-Factor Convertible Bonds	248
	Problems	254

---

**Part II Numerical Methods for Derivative Securities**

---

<b>5</b>	<b>Basic Numerical Methods</b>	267
5.1	Approximations	267
5.1.1	Interpolation	267
5.1.2	Approximation of Partial Derivatives	271
5.1.3	Approximate Integration	274
5.1.4	Least Squares Approximation	276
5.2	Solution of Systems and Eigenvalue Problems	277
5.2.1	LU Decomposition of Linear Systems	277
5.2.2	Iteration Methods for Linear Systems	280
5.2.3	Iteration Methods for Nonlinear Systems	282
5.2.4	Obtaining Eigenvalues and Eigenvectors	287
5.3	Finite-Difference Methods	292
5.4	Stability and Convergence Analysis	302
5.4.1	Stability	302
5.4.2	Convergence	311
5.5	Extrapolation of Numerical Solutions	314
5.6	Determination of Parameters in Models	318
5.6.1	Constant Variances and Covariances	319
5.6.2	Variable Parameters	321
	Problems	323
	Projects	328
<b>6</b>	<b>Initial-Boundary Value and LC Problems</b>	331
6.1	Explicit Methods	331
6.1.1	Pricing European Options by Using $\bar{V}$ , $\xi$ , $\tau$ or $u$ , $x$ , $\bar{\tau}$ Variables	331
6.1.2	Projected Methods for LC Problems	335
6.1.3	Binomial and Trinomial Methods	338
6.1.4	Relations Between the Lattice Methods and the Explicit Finite-Difference Methods	346

6.1.5	Examples of Unstable Schemes .....	349
6.2	Implicit Methods .....	349
6.2.1	Pricing European Options by Using $\bar{V}$ , $\xi$ , $\tau$ Variables ..	349
6.2.2	European Options with Discrete Dividends and Asian and Lookback Options with Discrete Sampling .....	351
6.2.3	Projected Direct Methods for the LC Problem .....	354
6.2.4	Projected Iteration Methods for the LC Problem .....	357
6.2.5	Comparison with Explicit Methods .....	359
6.3	Singularity-Separating Method .....	360
6.3.1	Barrier Options .....	361
6.3.2	European Vanilla Options with Variable Volatilities .....	365
6.3.3	Bermudan Options .....	370
6.3.4	European Parisian Options .....	376
6.3.5	European Average Price Options .....	378
6.3.6	European Two-Factor Options .....	381
6.3.7	Two-Factor Convertible Bonds with $D_0 = 0$ .....	391
6.4	Pseudo-Spectral Methods .....	391
	Problems .....	396
	Projects .....	401
<b>7</b>	<b>Free-Boundary Problems .....</b>	<b>405</b>
7.1	SSM for Free-Boundary Problems .....	406
7.1.1	One-Dimensional Cases .....	406
7.1.2	Two-Dimensional Cases .....	411
7.2	Implicit Finite-Difference Methods .....	422
7.2.1	Solution of One-Dimensional Problems .....	422
7.2.2	Solution of Greeks .....	427
7.2.3	Numerical Results of Vanilla Options and Comparison ..	429
7.2.4	Solution and Numerical Results of Exotic Options .....	437
7.2.5	Solution of Two-Dimensional Problems .....	445
7.2.6	Numerical Results of Two-Factor Options .....	449
7.3	Pseudo-Spectral Methods .....	456
7.3.1	The Description of the Pseudo-Spectral Methods for Two-Factor Convertible Bonds .....	456
7.3.2	Numerical Results of Two-Factor Convertible Bonds ..	462
	Problems .....	467
	Projects .....	471
<b>8</b>	<b>Interest Rate Modelling .....</b>	<b>473</b>
8.1	Inverse Problems .....	473
8.1.1	Another Formulation of the Inverse Problem .....	473
8.1.2	Numerical Methods for the Inverse Problem .....	478
8.1.3	Numerical Results on Market Prices of Risk .....	481
8.2	Numerical Results of One-Factor Models .....	484
8.3	Pricing Derivatives with Multi-Factor Models .....	490

XVIII Contents

8.3.1	Determining Models from the Market Data .....	490
8.3.2	Numerical Methods and Results .....	494
Problems	.....	498
Projects	.....	500
<b>References</b>	.....	<b>503</b>
<b>Index</b>	.....	<b>509</b>
