PREFACE	VII
ACKNOWLEDGMENTS	XI
CONTENTS.....	XIII
INTRODUCTION	XIX
1. HERE, THERE BE DRAGONS.....	1
1.1 <i>Clinical Investigation Before the 1940s</i>	2
1.2 <i>Limitations of Case Reports</i>	4
1.3 <i>Genesis of the Clinical Trial</i>	4
1.4 <i>The Requirement for Control</i>	6
1.5 <i>The Dilemma of Randomization</i>	7
1.6 <i>Blinding</i>	11
1.7 <i>Hill's Results</i>	15
1.8 <i>The Monitoring Rationale</i>	15
1.9 <i>Early Monitoring Tools: Sequential Trials</i>	16
1.10 <i>Data Monitoring Committees</i>	17
1.11 <i>Gaining Experiences in Monitoring: CDP</i>	18
1.12 <i>Ceaseless Agitation</i>	19
1.13 <i>Early Explanations for Brownian Motion</i>	21
1.14 <i>Enter the Mathematicians</i>	22
1.15 <i>Trajectory Mathematics</i>	23
1.16 <i>Momentum Builds for Monitoring Procedures</i>	24
1.17 <i>Bayesian Considerations</i>	25
1.18 <i>"Then they'll get it right..."</i>	26
1.19 <i>Balancing the Equation</i>	27
<i>References</i>	28
2. THE BASIS OF STATISTICAL REASONING IN MEDICINE.....	33
2.1 <i>The Cow in the Investigator's House</i>	33
2.2 <i>Research, Populations, and Samples</i>	34
2.2.1 <i>The Tail Wagging the Dog</i>	34
2.3 <i>Three Principles of Sample-Based Research</i>	35
2.3.1 <i>Analysis Triaging</i>	36
2.4 <i>The Monitoring Complication</i>	37
2.5 <i>The Need for Prospective Design</i>	38
2.5.1 <i>Sample Vision</i>	38
2.5.2 <i>Advantages of the Random Sample</i>	39
2.5.3 <i>Limitations of the Random Sample</i>	39
2.5.4 <i>Trustworthy Estimators</i>	41

2.6	<i>The Role of Probability and Statistics</i>	42
2.7	<i>Statistical Inference</i>	43
2.7.1	Confidence Intervals	43
2.7.2	Bayesian Procedures	44
2.7.2.1	Classical Statistics (the “Frequentists”)	44
2.7.2.2	The Bayesians	45
2.7.3	Hypothesis Testing Paradigm	46
2.7.4	P-Values	47
2.7.5	Statistical Power	49
2.8	<i>Conclusions</i>	50
	<i>References</i>	50
3.	PROBABILITY TOOLS FOR MONITORING RULES	53
3.1	<i>Using Probability to Monitor Research</i>	53
3.2	<i>Subjective Probability</i>	54
3.3	<i>Probability as Relative Frequency</i>	55
3.4	<i>Decomposing Events</i>	56
3.4.1	Combinations of Events	57
3.4.2	Joint Occurrences	58
3.4.3	Mutual Exclusivity	58
3.4.4	Independence	59
3.4.5	Dependence	60
3.4.6	Unions of Events	63
3.4.7	Unions and Intersections in Monitoring	64
3.4.8	Complements	66
3.5	<i>Investigator Perplexity</i>	67
3.5.1	Countably versus Uncountably Many	69
3.5.2	Applicability to Monitoring Clinical Studies	70
3.6	<i>The Normal Distribution</i>	71
3.6.1	Introduction	71
3.6.2	Using the Normal Distribution	72
3.6.2.1	Simplifying Transformations	72
3.6.2.2	Symmetry	74
3.7	<i>Probability and Monitoring Procedures</i>	75
	<i>Problems</i>	77
	<i>References</i>	78
4.	ISSUES AND INTUITIONS IN PATH ANALYSIS	79
4.1	<i>Pondering the Meaning of It All</i>	79
4.2	<i>Generalization Complexities</i>	80
4.3	<i>Why Are Special Tools Necessary?</i>	81
4.3.1	Repeated Testing	82
4.3.2	Variability	84
4.3.3	Dependence	86
4.4	<i>Following Trajectories</i>	90
4.4.1	Riding the Path of an Effect Size	91
4.4.2	The Direction of Random Drift	94
4.4.3	Two Path Influences	95
4.4.4	Trajectory Concerns	96

4.4.5 Memoryless.....	96
4.4.6 Alternative Measures	98
4.4.7 Dilemmas and Resolutions.....	99
4.5 Brownian Motion.....	100
4.5.1. Standard Brownian Motion.....	101
4.5.1.1 Property 1: $B(0) = 0$	101
4.5.1.2 $B(t)$ Is Normally Distributed.....	101
4.5.1.3 $B(t)$ Is Memoryless	102
4.5.2 $B(t)$ Conditioned on the Past.....	103
4.5.3 The Reflection Principle	105
4.5.4 Brownian Motion with Drift	106
4.6 Monitoring Research and Brownian Motion	108
<i>Problems.....</i>	<i>108</i>
<i>References.....</i>	<i>110</i>
5. GROUP SEQUENTIAL ANALYSIS PROCEDURES	113
5.1 Sounding the Alarm	113
5.2 Group Sequential Defined	114
5.3 Group Sequenced Data and Brownian Motion.....	115
5.4 Analysis Classes for Group Sequenced Data.....	116
5.4.1 Looking Backward.....	116
5.4.2 Looking Forward	117
5.5 Analysis Complexities.....	118
5.6 Using Brownian Motion to Monitor Efficacy	120
5.6.1 Introductory Computations	121
5.6.2 Information Time	123
5.6.3 Monitoring Device and Brownian Motion	124
5.7 Boundaries and Alpha Spending Functions.....	129
5.7.1 Boundary Values.....	130
5.7.1.1 Motivating the Shape of the Boundary	130
5.7.2 Alpha Spending Functions*	133
<i>Problems.....</i>	<i>139</i>
<i>References.....</i>	<i>141</i>
6. LOOKING FORWARD: CONDITIONAL POWER	143
6.1 Notation and Perspective.....	144
6.2 Example of a “Forward Look” Computation.....	145
6.3 Nomenclature.....	146
6.4. Examples of Conditional Power Computations	148
6.5 Type I Error Under Conditional Power.....	151
6.6 Boundary Values and Conditional Power	153
6.7 Conditional Power Computations	154
6.7.1 Monitoring the Number of Events*	156
6.8 Following Trajectories: Brownian Bridges*	157
6.9 Significance Levels and Early Termination*	165
<i>Problems.....</i>	<i>166</i>
<i>References.....</i>	<i>168</i>

7. SAFETY AND FUTILITY	169
7.1 <i>Scope of This Chapter</i>	169
7.2 <i>Complication in Safety Monitoring</i>	170
7.3 <i>Monitoring Safety for Primary Endpoints</i>	171
7.3.1 Symmetric Boundaries.....	171
7.3.2 Asymmetric Boundaries.....	174
7.3.3 Multiple Prospective Safety Endpoints*	175
7.3.4 Combined Safety Endpoints*.....	178
7.4 <i>Monitoring Safety in Small Samples*</i>	181
7.5 <i>Exploratory Monitoring for Safety</i>	184
7.5.1 Monitor Widely.....	185
7.5.2 Assessing Unanticipated Adverse Events	185
7.5.3 The Need for Balance	187
7.5.4 The Clinical Ethic versus Mathematics.....	188
7.6 <i>Monitoring for Futility</i>	189
7.6.1 Constructing a Futility Index	189
7.6.2 Calculation for Futility.....	191
7.6.3 Futility Under Alternative Drift*	192
<i>Problems</i>	198
<i>References</i>	199
8. BAYESIAN STATISTICAL MONITORING	201
8.1 <i>Frequentist versus Bayesian Philosophy</i>	201
8.2 <i>An Example of a Bayes Monitoring Rule</i>	203
8.2.1 Prior Distribution	204
8.2.2 Computing the Power	205
8.2.3 Incorporating the Prior Information	207
8.3 <i>Using Continuous Prior Information</i>	209
8.4 <i>Mixing Prior Information</i>	214
8.5 <i>Conclusions</i>	219
<i>Problems</i>	219
<i>References</i>	220
APPENDIX A. BOUNDARY VALUES FOR NORMAL MEAN.....	221
APPENDIX B. CONDITIONAL BROWNIAN MOTION	225
B.1 <i>Nomenclature and Background Mathematics</i>	225
B.1.1 Notation.....	225
B.1.2 Multivariate Normal Distributions	226
B.2 <i>Covariance and Brownian Motion Elements</i>	226
B.3 <i>Brownian Motion Conditioned on the Past</i>	227
B.4 <i>Brownian Motion Conditioned on the Past and Future</i>	229
APPENDIX C. BOUNDARY VALUES AND CONDITIONAL POWER	233
C.1 <i>Monitoring for Efficacy or Harm</i>	233
C.2 <i>Calculation for Futility</i>	235
APPENDIX D. SUPPORTING BAYESIAN COMPUTATIONS	239

D.1. Application to Predictive Boundaries245

APPENDIX E. STANDARD NORMAL PROBABILITIES249

INDEX251
