
CONTENTS

Preface	xiii
Part One. Fundamentals of Genetic Processes	
1. Introductory Concepts	3
1.1 What is DNA and What is a Gene?	3
1.2 What is Gene Cloning?	4
1.3 Cell Organizations	5
1.4 Heredity Factors and Traits	6
1.5 Mitosis and Meiosis	9
1.6 Relating Genes to Inherited Trait	10
1.7 Why Gene Cloning?	11
Review	13
2. Structures of Nucleic Acids	15
2.1 3'-OH and 5'-P Ends	15
2.2 Purine and Pyrimidine Bases	16
2.3 Complementary Base Pairing	17
2.4 Writing a DNA Molecule	18
2.5 Describing DNA sizes	19
2.6 Denaturation and Renaturation	19
2.7 Ribonucleic Acid	20
Review	21

3.	Structures of Proteins	23
3.1	Amino Acids	23
3.2	The Peptide Bond	25
3.3	Structural Organization	26
3.4	Postranslational Modification	27
3.5	Enzymes	28
	Review	30
4.	The Genetic Process	31
4.1	From Genes to Proteins	31
4.2	Transcription	31
4.3	Translation	32
4.4	The Genetic Code	33
4.5	Why Present a Sequence Using the Coding Strand?	34
4.6.	The Reading Frame	35
4.7	DNA Replication	37
4.8	The Replicon and Replication Origin	38
4.9	Relating Replication to Gene Cloning	39
	Review	39
5.	Organization of Genes	41
5.1	The Lactose Operon	41
5.2	Control of Transcription	42
5.2.1	The Transcription Start Site and Termination Site	42
5.2.2	When Does Transcription Start or Stop?	44
5.3.	Control of Translation	46
5.3.1	Ribosome Binding Site and Start Codon	46
5.3.2	Translation Termination Site	47
5.4	The Tryptophan Operon	47
5.4.1	Co-repressor	48
5.4.2	Attenuation	48
5.4.3	Hybrid Promoters	49
5.5	The Control System in Eukaryotic Cells	49
5.5.1	Transcriptional Control	49
5.5.2	Introns and Exons	51
5.5.3	Capping and Tailing	52
5.5.4	Ribosome Binding Sequence	52
5.5.5	Monocistronic and Polycistronic	52

Review	60
6. Reading the Nucleotide Sequence of a Gene	55
6.1 The <i>E. coli dut</i> gene	55
6.2 The human <i>bgn</i> gene	58
6.2.1 Reading the genomic sequence	58
6.2.2 Reading the cDNA sequence	62
Part Two. Techniques and Strategies of Gene Cloning	
7. Enzymes Used in Cloning	69
7.1 Restriction Enzymes	69
7.2 Ligase	70
7.3 DNA Polymerases	71
7.3.1 <i>E. coli</i> DNA Polymerase I	71
7.3.2 Bacteriophage T4 and T7 polymerase	73
7.3.3 Reverse Transcriptase	74
7.3.4 RNA Polymerase	74
7.4 Phosphatase and kinase	74
Review	75
8. Techniques Used in Cloning	77
8.1 DNA Isolation	77
8.2 Gel Electrophoresis	77
8.2.1 Agarose Gel Electrophoresis	78
8.2.2 Polyacrylamide Gel Electrophoresis	79
8.3 Wester Blot	80
8.4 Southern Transfer	80
8.5 Colony Blot	81
8.6 Hybridization	82
8.7 Immunological Techniques	83
8.8 DNA Sequencing	85
8.9 Polymerase Chain Reaction	87
8.10 Site-Directed Mutagenesis	89
8.11 Non-radioactive Detection Methods	90
Review	91
9. Cloning Vectors for Introducing Genes into Host Cells	93

9.1	Vectors for Bacterial Cells	93
9.1.1	Plasmid Vecors	93
9.1.2	Bacteriophage Vectors	99
9.1.3	Cosmids	104
9.1.4	Phagemids	105
9.2	Yeast Cloning Vectors	106
9.2.1	The 2 μ Circle	106
9.3	Vectors for Plant Cells	108
9.3.1	Binary Vector System	109
9.3.2	Cointegrative Vector System	110
9.3.3	Genetic Markers	111
9.3.4	Plant Specific Promoters	113
9.4	Vectors for Mammalian Cells	114
9.4.1	SV40 Viral Vectors	114
9.4.2	Direct DNA Transfer	116
9.4.3	Insect Baculovirus	117
9.4.4	Retrovirus	121
	Review	123
10.	Transformation	125
10.1	Calcium Salt Treatment	125
10.2	Electroporation	126
10.3	Agrobacterium Infection	126
10.4	The Biolistic Process	126
10.5	Viral Transfection	127
10.6	Microinjection	127
10.7	Nuclear Transfer	128
	Review	129
11.	Isolating Genes for Cloning	131
11.1	The Genome Library	131
11.2	The cDNA Library	132
11.3	Choosing The Right Cell Types for mRNA Isolation	134
	Review	134
Part Three. Impact of Gene Cloning - Applications in Agriculture		
12	Improving Tomato Quality by Antisense RNA	137

12.1	Antisense RNA	137
12.2	A Strategy for Engineering Tomatoes with	139
	Review	141
13.	Transgenic Crops Engineered with Insecticidal Activity	
13.1	<i>Bacillus thuringiensis</i> Toxins	143
13.2	Cloning of the <i>cry</i> gene into cotton plants	143
	13.2.1 Modifying the <i>cry</i> gene	144
	13.2.2 The Intermediate Vector	144
	13.2.3 Transformation by <i>Agrobacterium</i>	144
	Review	145
14.	Transgenic Crops Conferred with Herbicide Resistance	147
14.1	Glyphosate	148
14.2	Cloning of the <i>aroA</i> gene	148
	Review	149
15.	Growth Enhancement in Transgenic Fish	151
15.1	Gene Transfer in Fish	151
15.2	Cloning Salmons with a Chimeric Growth Hormone Gene	152
	Review	153
Part Four. Impact of Gene Cloning - Applications in Medicine and Related Areas		
16.	Microbial Production of Recombinant Human Insulin	157
16.1	Structure and Action of Insulin	157
16.2	Cloning Human Insulin Gene	158
	Review	159
17.	Finding Disease-Causing Genes	161
17.1	Genetic Linkage	161
	17.1.1 Frequency of Recombination	162
	17.1.2 Genetic Markers	163
17.2	Positional Cloning	163

17.2.1	Chromosome Walking	164
17.2.2	Chromosome Jumping	165
17.2.3	Yeast Artificial Chromosome	165
17.3	Exon Amplification	166
17.4	Isolation of the Mouse <i>Obese</i> Gene	167
	Review	168
18.	Human Gene Therapy	169
18.1	Physical Chemical Methods	170
18.2	Biological Methods	171
18.2.1	Life Cycle of Retroviruses	171
18.2.2	Construction of a Safe Retrovirus Vector	171
18.3	Gene Treatment of Severe Combined Immune Deficiency	172
18.4	Therapeutic Vaccines	173
18.4.1	Construction of DNA Vaccines	174
18.4.2	Methods of Delivery	174
	Review	174
19.	Gene Targeting	177
19.1	Recombination	177
19.2	Replacement Targeting Vectors	178
19.3	Gene Targeting Without Selectable Markers	180
19.3.1	The PCR Method	180
19.3.2	The Double-Hit Method	181
19.3.3	The <i>Cre/loxP</i> Recombination	181
19.4	Gene Targeting for Xenotransplants	182
	Review	184
20.	DNA Typing	185
20.1	Variable Number Tandem Repeats	185
20.2	Polymorphism Analysis Using VNTR Markers	186
20.3	Single-locus and Multi-locus Probes	187
20.4	Paternity Case Analysis	188
20.5	Short Tandem Repeat Markers	189
20.5.1	The Combined DNA Index System	190
20.6	Mitochondrial DNA Sequence Analysis	191
	Review	193

21.	Transpharmers - Bioreactors for Pharmaceutical Products	195
21.1	General Procedure for Production of Transgenic Animals	196
21.2	Transgenic Sheep for α 1-Antitrypsin	196
	Review	197
22.	Animal Cloning	199
22.1	Cell Differentiation	199
22.2	Nuclear Transfer	200
22.3	The Cloning of Dolly	201
	Review	202
23.	Human Genome Sequencing	203
23.1	Genetic Maps	203
23.1.1	DNA Markers	204
23.1.2	Pedigree Analysis	204
23.2	Physical Maps	205
23.2.1	Sequence Tagged Sites	205
23.2.2	Radiation Hybridization	206
23.2.3	Clone Libraries	206
23.2.4	Bacteria Artificial Chromosome Vector	207
23.3	Comprehensive Integrated maps	206
23.4	Strategies for Genome Sequencing	209
23.4.1	Hierarchical Shotgun Sequencing	209
23.4.2	Whole-Genome Shotgun Sequencing	210
	Review	211
	References	213
	Index	227
