Preface xi

Chapter one

Introduction: Statistics as a Research Tool 1

- The Purpose of Statistics Is to Clarify 3
- Statistics Are Used to Solve Problems 4
- Basic Principles Apply Across Statistical Techniques 5
- The Uses of Statistics 7

Chapter two

Measurement: The Basic Building Block of Research 13

- Science and Measurement: Classification as a First Step in Research 14
- Levels of Measurement 15
- Relating Interval, Ordinal, and Nominal Scales: The Importance of Collecting Data at the Highest Level Possible 22
- What Is a Good Measure? 23

Chapter three

Representing and Displaying Data 33

- What Are Frequency Distributions and Histograms? 34
- Extending Histograms to Multiple Groups: Using Bar Charts 40
- Using Bar Charts with Nominal or Ordinal Data 47
- Pie Charts 48
- Time Series Data 49

Chapter four

Describing the Typical Case: Measures of Central Tendency 59

- The Mode: Central Tendency in Nominal Scales 60
- The Median: Taking into Account Position 62
- The Mean: Adding Value to Position 68
- Statistics in Practice: Comparing the Median and the Mean 76

Chapter five

How Typical Is the Typical Case?: Measuring Dispersion 86

- Measures of Dispersion for Nominal- and Ordinal-Level Data 87
- Measuring Dispersion in Interval Scales: The Range, Variance, and Standard Deviation 94

Chapter six

 The Logic of Statistical Inference: Making Statements
 About Populations from Sample Statistics 115

- The Dilemma: Making Statements About Populations from Sample Statistics 116
- The Research Hypothesis 119
- The Null Hypothesis 121
- Risks of Error in Hypothesis Testing 123
- Risks of Error and Statistical Levels of Significance 125
- Departing from Conventional Significance Criteria 127

Chapter seven

 Defining the Observed Significance Level of a Test:
 A Simple Example Using the Binomial Distribution 135

- The Fair Coin Toss 137
- Different Ways of Getting Similar Results 141
- Solving More Complex Problems 144
- The Binomial Distribution 145
- Using the Binomial Distribution to Estimate the Observed Significance Level of a Test 149

Chapter eight

 Steps in a Statistical Test: Using the Binomial Distribution
 to Make Decisions About Hypotheses 161

- The Problem: The Impact of Problem-Oriented Policing on Disorderly Activity at Violent-Crime Hot Spots 162
- Assumptions: Laying the Foundations for Statistical Inference 164
- Selecting a Sampling Distribution 170
- Significance Level and Rejection Region 172
- The Test Statistic 177
- Making a Decision 177

Chapter nine

 Chi-Square: A Test Commonly Used for Nominal-Level Measures 186

- Testing Hypotheses Concerning the Roll of a Die 187
- Relating Two Nominal-Scale Measures in a Chi-Square Test 195
- Extending the Chi-Square Test to Multicategory Variables: The Example of Cell Allocations in Prison 201
- Extending the Chi-Square Test to a Relationship Between Two Ordinal Variables: Identification with Fathers and Delinquent Acts 206
- The Use of Chi-Square When Samples Are Small: A Final Note 211

Chapter ten

 The Normal Distribution and Its Application to Tests
 of Statistical Significance 221

- The Normal Frequency Distribution, or Normal Curve 222
- Applying Normal Sampling Distributions to Nonnormal Populations 234
- Comparing a Sample to an Unknown Population: The Single-Sample z -Test for Proportions 239
- Comparing a Sample to an Unknown Population: The Single-Sample t -Test for Means 244

Chapter eleven

- Comparing Means and Proportions in Two Samples 256
- Comparing Sample Means 257
 - Comparing Sample Proportions: The Two-Sample t -Test for Differences of Proportions 269
 - The t -Test for Dependent Samples 275
 - A Note on Using the t -Test for Ordinal Scales 280

Chapter twelve

- Comparing Means Among More Than Two Samples: Analysis of Variance 292
- Analysis of Variance 293
 - Defining the Strength of the Relationship Observed 314
 - Making Pairwise Comparisons Between the Groups Studied 317
 - A Nonparametric Alternative: The Kruskal-Wallis Test 320

Chapter thirteen

- Measures of Association for Nominal and Ordinal Variables 335
- Distinguishing Statistical Significance and Strength of Relationship:
 - The Example of the Chi-Square Statistic 336
 - Measures of Association for Nominal Variables 339
 - Measures of Association for Ordinal-Level Variables 351
 - Choosing the Best Measure of Association for Nominal- and Ordinal-Level Variables 369

Chapter fourteen

- Measuring Association for Interval-Level Data:
Pearson's Correlation Coefficient 381
- Measuring Association Between Two Interval-Level Variables 382
 - Pearson's Correlation Coefficient 384
 - Spearman's Correlation Coefficient 402
 - Testing the Statistical Significance of Pearson's r 404
 - Testing the Statistical Significance of Spearman's r 411

Chapter fifteen

- An Introduction to Bivariate Regression 421
- Estimating the Influence of One Variable on Another: The Regression Coefficient 422
 - Prediction in Regression: Building the Regression Line 427
 - Evaluating the Regression Model 435
 - The F -Test for the Overall Regression 449

Chapter sixteen

- Multivariate Regression 462
- The Importance of Correct Model Specifications 463
 - Correctly Specifying the Regression Model 475

Chapter seventeen**Multivariate Regression: Additional Topics 494**

- Non-linear Relationships 496
- Interaction Effects 502
- An Example: Race and Punishment Severity 505
- An Example: Punishment Severity 513
- The Problem of Multicollinearity 514

Chapter eighteen**Logistic Regression 526**

- Why Is It Inappropriate to Use OLS Regression for a Dichotomous Dependent Variable? 528
- Logistic Regression 533
- Interpreting Logistic Regression Coefficients 545
- Comparing Logistic Regression Coefficients 555
- Evaluating the Logistic Regression Model 561
- Statistical Significance in Logistic Regression 565

Chapter nineteen**Multivariate Regression with Multiple Category Nominal or Ordinal Measures:
Extending the Basic Logistic Regression Model 579**

- Multinomial Logistic Regression 581
- Ordinal Logistic Regression 593
- Substantive Example: Severity of Punishment Decisions 597

Chapter twenty**Special Topics: Confidence Intervals 607**

- Confidence Intervals 609
- Constructing Confidence Intervals 613

Chapter twenty one**Special Topics: Statistical Power 629**

- Statistical Power 631
- Parametric versus Nonparametric Tests 640
- Estimating Statistical Power: What Size Sample Is Needed for a Statistically Powerful Study? 640
- Summing Up: Avoiding Studies Designed for Failure 644

- Appendix 1 Factorials 651
- Appendix 2 Critical Values of χ^2 Distribution 652
- Appendix 3 Areas of the Standard Normal Distribution 653
- Appendix 4 Critical Values of Student's t Distribution 654
- Appendix 5 Critical Values of the F -Statistic 655
- Appendix 6 Critical Value for P (P_{crit}), Tukey's HSD Test 658
- Appendix 7 Critical Values for Spearman's Rank-Order Correlation Coefficient 659
- Appendix 8 Fisher r -to- Z^* Transformation 660

Glossary 662

Index 669
