Preface	xiii
Preface to 2nd Edition	xvii
Preface to 3rd Edition	xix
Part 1. Basic Theory—The Simplex Method and Duality	1
Chapter 1. Introduction	3
1. Managing a Production Facility	3
2. The Linear Programming Problem	6
Exercises	8
Notes	10
Chapter 2. The Simplex Method	13
1. An Example	13
2. The Simplex Method	16
3. Initialization	19
4. Unboundedness	22
5. Geometry	22
Exercises	24
Notes	27
Chapter 3. Degeneracy	29
1. Definition of Degeneracy	29
2. Two Examples of Degenerate Problems	29
3. The Perturbation/Lexicographic Method	32
4. Bland's Rule	36
5. Fundamental Theorem of Linear Programming	38
6. Geometry	39
Exercises	42
Notes	43
Chapter 4. Efficiency of the Simplex Method	45

1. Performance Measures	45
2. Measuring the Size of a Problem	45
3. Measuring the Effort to Solve a Problem	46
4. Worst-Case Analysis of the Simplex Method	47
Exercises	52
Notes	53
Chapter 5. Duality Theory	55
1. Motivation—Finding Upper Bounds	55
2. The Dual Problem	57
3. The Weak Duality Theorem	58
4. The Strong Duality Theorem	60
5. Complementary Slackness	66
6. The Dual Simplex Method	68
7. A Dual-Based Phase I Algorithm	71
8. The Dual of a Problem in General Form	73
9. Resource Allocation Problems	74
10. Lagrangian Duality	78
Exercises	79
Notes	87
Chapter 6. The Simplex Method in Matrix Notation	89
1. Matrix Notation	89
2. The Primal Simplex Method	91
3. An Example	96
4. The Dual Simplex Method	101
5. Two-Phase Methods	104
6. Negative Transpose Property	105
Exercises	108
Notes	109
Chapter 7. Sensitivity and Parametric Analyses	111
1. Sensitivity Analysis	111
2. Parametric Analysis and the Homotopy Method	115
3. The Parametric Self-Dual Simplex Method	119
Exercises	120
Notes	124
Chapter 8. Implementation Issues	125
1. Solving Systems of Equations: LU -Factorization	126
2. Exploiting Sparsity	130
3. Reusing a Factorization	136
4. Performance Tradeoffs	140

5. Updating a Factorization	141
6. Shrinking the Bump	145
7. Partial Pricing	146
8. Steepest Edge	147
Exercises	149
Notes	150
Chapter 9. Problems in General Form	151
1. The Primal Simplex Method	151
2. The Dual Simplex Method	153
Exercises	159
Notes	160
Chapter 10. Convex Analysis	161
1. Convex Sets	161
2. Carathéodory's Theorem	163
3. The Separation Theorem	165
4. Farkas' Lemma	167
5. Strict Complementarity	168
Exercises	170
Notes	171
Chapter 11. Game Theory	173
1. Matrix Games	173
2. Optimal Strategies	175
3. The Minimax Theorem	177
4. Poker	181
Exercises	184
Notes	187
Chapter 12. Regression	189
1. Measures of Mediocrity	189
2. Multidimensional Measures: Regression Analysis	191
3. L^2 -Regression	193
4. L^1 -Regression	195
5. Iteratively Reweighted Least Squares	196
6. An Example: How Fast is the Simplex Method?	198
7. Which Variant of the Simplex Method is Best?	202
Exercises	203
Notes	208
Chapter 13. Financial Applications	211
1. Portfolio Selection	211

2. Option Pricing	216
Exercises	221
Notes	222
Part 2. Network-Type Problems	223
Chapter 14. Network Flow Problems	225
1. Networks	225
2. Spanning Trees and Bases	228
3. The Primal Network Simplex Method	233
4. The Dual Network Simplex Method	237
5. Putting It All Together	240
6. The Integrality Theorem	243
Exercises	244
Notes	252
Chapter 15. Applications	253
1. The Transportation Problem	253
2. The Assignment Problem	255
3. The Shortest-Path Problem	256
4. Upper-Bounded Network Flow Problems	259
5. The Maximum-Flow Problem	262
Exercises	264
Notes	269
Chapter 16. Structural Optimization	271
1. An Example	271
2. Incidence Matrices	273
3. Stability	274
4. Conservation Laws	276
5. Minimum-Weight Structural Design	279
6. Anchors Away	281
Exercises	284
Notes	284
Part 3. Interior-Point Methods	287
Chapter 17. The Central Path	289
Warning: Nonstandard Notation Ahead	289
1. The Barrier Problem	289
2. Lagrange Multipliers	292
3. Lagrange Multipliers Applied to the Barrier Problem	295
4. Second-Order Information	297

5. Existence	297
Exercises	299
Notes	301
Chapter 18. A Path-Following Method	303
1. Computing Step Directions	303
2. Newton's Method	305
3. Estimating an Appropriate Value for the Barrier Parameter	306
4. Choosing the Step Length Parameter	307
5. Convergence Analysis	308
Exercises	314
Notes	318
Chapter 19. The KKT System	319
1. The Reduced KKT System	319
2. The Normal Equations	320
3. Step Direction Decomposition	322
Exercises	325
Notes	325
Chapter 20. Implementation Issues	327
1. Factoring Positive Definite Matrices	327
2. Quasidefinite Matrices	331
3. Problems in General Form	337
Exercises	342
Notes	342
Chapter 21. The Affine-Scaling Method	345
1. The Steepest Ascent Direction	345
2. The Projected Gradient Direction	347
3. The Projected Gradient Direction with Scaling	349
4. Convergence	353
5. Feasibility Direction	355
6. Problems in Standard Form	356
Exercises	357
Notes	358
Chapter 22. The Homogeneous Self-Dual Method	361
1. From Standard Form to Self-Dual Form	361
2. Homogeneous Self-Dual Problems	362
3. Back to Standard Form	372
4. Simplex Method vs Interior-Point Methods	375
Exercises	379

Notes	380
Part 4. Extensions	383
Chapter 23. Integer Programming	385
1. Scheduling Problems	385
2. The Traveling Salesman Problem	387
3. Fixed Costs	390
4. Nonlinear Objective Functions	390
5. Branch-and-Bound	392
Exercises	404
Notes	405
Chapter 24. Quadratic Programming	407
1. The Markowitz Model	407
2. The Dual	412
3. Convexity and Complexity	414
4. Solution Via Interior-Point Methods	418
5. Practical Considerations	419
Exercises	422
Notes	423
Chapter 25. Convex Programming	425
1. Differentiable Functions and Taylor Approximations	425
2. Convex and Concave Functions	426
3. Problem Formulation	426
4. Solution Via Interior-Point Methods	427
5. Successive Quadratic Approximations	429
6. Merit Functions	429
7. Parting Words	433
Exercises	433
Notes	435
Appendix A. Source Listings	437
1. The Self-Dual Simplex Method	438
2. The Homogeneous Self-Dual Method	441
Answers to Selected Exercises	445
Bibliography	449
Index	457
