PREFACE	v
CHAPTER 1: SPACE NEUROSCIENCE: WHAT IS IT?	1
1 The Space Environment	2
1.1 Microgravity	2
1.2 Accelerations	3
1.3 Light	5
1.4 Ionizing Radiation	5
1.5 Confinement and Isolation	5
2 Opportunities for Space Research	6
2.1 Space Missions in Low Earth Orbit	6
2.2 Interplanetary Missions	7
2.2.1 Moon Missions	7
2.2.2 Mars Missions	9
2.3 Ground-Based Facilities	11
3 Neuroscience	11
3.1 Definitions	11
3.2 The Human Brain	13
4 Effects of Gravity on Brain Functions	13
4.1 Gravity-Sensing Receptors	14
4.2 Central Processing	16
4.3 Motor Responses	18
4.3.1 Otolith Reflexes	18
4.3.2 Posture	20
4.3.3 Locomotion	20
4.3.4. Arm Movements	21
4.4 Spatial Orientation	21
4.4.1 Definition	21
4.4.2 Spatial Disorientation	23
4.4.3 Effects of Space Flight	23
4.5 Cognition	25
4.5.1 Egocentric Localization	25
4.5.2 Motor Imagery	26
4.5.3 Anticipation	27
4.5.4 Internal Representation	28
4.5.5 Navigation	28
4.5.6 Vestibular Cortex	29
4.6 Integrative Physiology	30
4.7 Conclusion	31
CHAPTER 2: HISTORY OF SPACE NEUROSCIENCE	33
1 A Brief History of Human Space Flight	33
1.1 The Soviet and Russian Space Program	33
1.2 The United States Space Program	34
1.3 Additional Human Space Programs	37

2	Space Flight: An Engineering and Scientific Marvel	37
3	History of Neuroscience Research during Space Flight	40
	3.1 Humans in Space	40
	3.2 Space Life Sciences Experiments	42
4	Neuroscience Experiments Conducted during Space Flight	43
CHAPTER 3: OPERATIONAL ASPECTS		71
1	Space Motion Sickness	72
	1.1 Signs and Symptoms	72
	1.2 Incidence	73
	1.3 Provocative Stimuli	76
	1.3.1 Head and Body Movements	76
	1.3.2 Orientation Cues	77
	1.4 Time Course	77
	1.5 Theories for Space Motion Sickness	78
	1.5.1 Fluid Shift Theory	79
	1.5.2 Sensory Conflict Theory	79
	1.5.3 Treisman's Theory	80
	1.5.4 Otolith Mass Asymmetry Hypothesis	80
	1.5.5 Sensory Compensation Hypothesis	82
	1.5.6 Otolith Tilt-Translation Reinterpretation Hypothesis	82
	1.6 Prediction	84
	1.6.1 Preflight Terrestrial Motion Sickness Susceptibility	85
	1.6.2 Preflight and Postflight Susceptibility	85
	1.6.3 In-Flight Susceptibility	85
2	Sleep Disorders	86
	2.1 Causes for Sleep Disturbances during Space Flight	86
	2.2 Sleep Monitoring	87
3	Behavior and Performance	89
	3.1 Factors for Impairment Behavior and Performance	90
	3.2 Effects of Space Flight on Operational Performance	91
	3.3 Effects of Space Flight on Cognitive and Psychomotor Functions	93
	3.4 Research Program	95
4	Human Factors	96
5	Summary	98
CHAPTER 4: SENSORY FUNCTIONS IN SPACE		101
1	Vision	102
2	Hearing	105
3	Taste and Olfaction	107
4	Proprioception	109
	4.1 Limb Position and Pointing Ability	110
	4.2 Proprioceptive Illusions	111
5	The Sense of Motion	114
	5.1 The Vestibular System	114
	5.2 Linear Acceleration and Gravity	117
	5.3 Effects of Microgravity on the Vestibular System	119
	5.3.1 Anatomical Studies	119

5.3.2	Electrophysiological Studies	120
5.3.3	Developmental Studies	121
5.4	Perception Studies	122
5.4.1	Motion Perception	123
5.4.2	Tilt Perception	126
6	Summary	131
CHAPTER 5: POSTURE, MOVEMENT AND LOCOMOTION		133
1	Introduction	134
2	In-Flight Posture Studies in Animals	135
3	In-Flight Posture Studies in Humans	137
3.1	Rest Posture	137
3.2	In-Flight Postural Responses to Voluntary Movements	139
3.2.1	Arm Raising and Tiptoe Raising	139
3.2.2	Bending at the Waist	140
3.2.3	Squatting	140
3.3	In-Flight Postural Responses to Involuntary Movements	140
3.3.1	Support Surface Translation	140
3.3.2	Sudden Drop	141
3.3.3	Muscle Vibration	143
4	Pre- and Postflight Studies	144
4.1	Rail Tests	144
4.2	Stabilometry	145
4.3	Moving Platform Tests	146
4.3.1	Support Base Translation	146
4.3.2	Support Base Rotation	147
4.4	Complex Visual, Vestibular and Proprioceptive Tests	147
4.5	Tests of Vestibulo-Spinal Reflexes	150
4.6	Postural Responses to Voluntary Movements	150
4.7	Clinical Benefits	151
5	Locomotion Studies	152
5.1	In-Flight Observations	152
5.2	Pre- and Postflight Studies	153
5.2.1	Head and Gaze Stability	153
5.2.2	Dynamic Visual Acuity	155
5.2.3	Lower Limb Kinematics	156
5.2.4	Functional Mobility Test	157
5.3	Walking on the Moon and Mars	158
6	Summary	160
CHAPTER 6: COMPENSATORY EYE MOVEMENTS		163
1	Caloric Nystagmus	164
2	Vestibulo-Ocular Reflex	165
2.1	Background	165
2.2	VOR Asymmetry	166
2.3	Effects of Gravity on VOR	167
2.4	Microgravity Investigations	167
2.4.1	Horizontal VOR	168

	2.4.2 Vertical VOR	169
	2.4.3 Torsional VOR	171
	2.4.4 Ocular Counter-Rolling	172
	2.4.5 Linear Acceleration	174
	2.4.6 Off-Vertical Axis Rotation	175
3	Optokinetic System	176
	3.1 Background	176
	3.2 Microgravity Investigations	176
	3.2.1 Optokinetic Nystagmus	177
	3.2.2 Spatial Orientation of Eye Movements	179
4	Gaze, Saccades and Smooth Pursuit	181
	4.1 Gaze Holding	181
	4.2 Orienting Gaze	182
	4.2.1 Target Acquisition	184
	4.2.2 Gaze Stabilization	184
	4.2.3 Smooth Pursuit	186
5	Summary	186
CHAPTER 7: SPATIAL ORIENTATION		189
1	Introduction	190
	1.1 Maps and Internal Models	190
	1.2 Adaptive Effects	191
2	Anecdotal Reports from Crewmembers	193
	2.1 Spontaneous Illusions	194
	2.1.1 Inversion Illusion	194
	2.1.2 Visual Reorientation Illusion	195
	2.1.3 Falling Sensation	196
	2.1.4 Oscillopsia	197
	2.2 Illusions Generated by Motion	198
	2.2.1 Input-Output Gain Disturbances	199
	2.2.2 Temporal Disturbances	200
	2.2.3 Path Disturbances	201
3	Space Experiments on Spatial Orientation	202
	3.1 Subjective Horizontal and Vertical	202
	3.2 Visual Cues	204
	3.3 Otolith Cues	204
	3.3.1 Passive Head Movements	205
	3.3.2 Active Head Movements	206
	3.3.3 Refinement of OTTR	206
	3.4 Proprioceptive Cues	210
	3.5 Tactile Cues	211
4	Cognition in Space	211
	4.1 Behavior and Performance	212
	4.2 Navigation	213
	4.3 Mental Rotation	216
	4.4 Mental Representation	219
	4.4.1 Drawing and Handwriting Tests	220
	4.4.2 Depth Perception	224

4.4.3	Distance Perception	228
5	Summary	231
CHAPTER 8: COUNTERMEASURES		233
1	What is a Countermeasure?	234
2	Countermeasures for Space Motion Sickness	235
2.1	Selection	236
2.2	Vestibular Training	237
2.2.1	Provocative Sensory Conflicts	237
2.2.2	Preflight Adaptation Training	239
2.2.3	Biofeedback Training	240
2.3	Pharmacological Countermeasures	242
2.3.1	Ground-Based Studies	242
2.3.2	SMS Medication during Space Flight	244
2.4	Mechanical Countermeasures	246
2.4.1	Pressurized Insoles	246
2.4.2	Load Suits	247
2.4.3	Pneumatic Occlusion Cuff and LBNP	247
2.4.4	Neck Pneumatic Shock Absorber	247
2.4.5	Electrical Devices	248
3	Countermeasures for Behavior and Performance	248
3.1	Intra-Vehicular Activity Training	248
3.2	Extra-Vehicular Activity Training	249
3.3	Psychological Training	251
4	Artificial Gravity	252
5	Summary	257
CHAPTER 9: A VISION FOR SPACE NEUROSCIENCE		261
1	Basic Space Neuroscience Research	262
1.1	Neuroscience Research on Board the ISS	262
1.2	Time Course of Adaptation	263
1.3	Tools for Space Neuroscience Research	266
1.4	Integrative Physiology	266
1.5	Critical Questions in Space Neuroscience	267
1.5.1	Gravity-Sensing Receptors	267
1.5.2	Motor Systems	268
1.5.3	Spatial Orientation	269
1.5.4	Cognition	271
2	Applied Space Neuroscience Research	271
2.1	Training	272
2.2	Transit Earth-Mars	273
2.2.1	Adaptation Procedures	274
2.2.2	Reduced Dynamic Visual Acuity	275
2.2.3	Size Distance Illusions	275
2.2.4	Height Vertigo	276
2.2.5	Mental Rotation	276
2.2.6	Individual Differences	276
2.3	Living on Mars	276

2.3.1	Landing on Mars	276
2.3.2	Effects of Long-Term Exposure to 0.38 g	277
2.4	Returning to Earth	280
3	Conclusion	280
