

# Contents

<b>1. Introduction .....</b>	<b>1</b>
1.1 Problem Statement.....	1
1.2 An Optimization Problem.....	2
1.3 Elementary Calculus.....	5
1.4 Optimal Slope for Truss Bars .....	6
1.5 An Arch Problem.....	7
1.6 The Gradient of a Function.....	8
1.7 The Lagrange Multiplier Rule .....	11
1.8 Newton's Method .....	12
1.9 Solving Linear Equations.....	14
1.10 Linear Systems Versus Optimization.....	14
1.11 Equations of Structures.....	15
1.12 Plastic Analysis.....	18
1.13 A Beam Problem.....	19
1.14 Quadratic Programming.....	20
1.15 Embedding.....	21
1.16 Geometric Programming.....	21
1.17 Plastic Design of Plane Frames .....	22
1.18 Problems .....	24
<b>2. Some Tools of Optimization .....</b>	<b>29</b>
2.1 The Lagrange Multiplier Rule .....	29
2.2 The Kuhn-Tucker Conditions .....	31
2.3 Calculus of Variations .....	34
2.4 Newton's Method .....	36
2.4.1 An Example of Newton's Method.....	37
2.5 Linear Programming.....	40
2.5.1 An Example of the Simplex Method.....	41
2.5.2 Interior Point Methods .....	43
2.6 Sequential Linear Programming .....	44
2.7 Other Methods of Mathematical Programming .....	46
2.8 Genetic Algorithms.....	47
2.9 Problems .....	48
<b>3. Sequential Linear Programming and the Incremental Equations of Structures.....</b>	<b>49</b>
3.1 Introduction .....	49
3.2 The Incremental Equations of Structures.....	49
3.3 Application to Structural Optimization.....	51
3.4 An Example with a Displacement Constraint.....	52
3.5 Adding Stress Constraints.....	56
3.6 The 25-Bar Truss .....	57

3.7 A Frame Example .....	60
3.8 A Buckling Example.....	63
3.9 The Incremental Equations when Shape Change is Allowed.....	67
3.10 A Beam Example.....	72
3.11 A Plate Bending Problem.....	74
3.12 Problems .....	76
<b>4. Optimality Criteria Methods.....</b>	<b>77</b>
4.1 Introduction.....	77
4.2 The Most Simple Optimality Criteria Problem.....	78
4.3 Monotone Behavior .....	79
4.4 An Application.....	80
4.5 Sandwich Beams.....	84
4.6 A Generalization of the Truss problem.....	84
4.7 Plastic Design of Frames .....	86
4.8 Sandwich Plate Design. ....	88
4.9 Truss Design .....	89
4.10 A Plane Stress Problem.....	91
4.11 Prager and His Co-workers .....	95
4.11.1 The Axisymmetric Circular Plate .....	95
4.12 A Plate Problem .....	97
4.13 Problems .....	100
<b>5. Some Basic Optimization Problems .....</b>	<b>103</b>
5.1 Multiple Loading Conditions .....	103
5.1.1 An Example.....	105
5.1.2 Realizability .....	106
5.1.3 Three Loading Conditions .....	108
5.2 Deflection Constraints .....	109
5.2.1 Funaro's Example.....	112
5.2.2 Optimality Criteria Approach.....	117
5.2.3 An Example.....	121
5.3 Optimal Shape.....	122
5.3.1 Frame Problems.....	124
5.3.2 Code Design for a Truss Problem.....	126
5.4 Generating New Designs Automatically.....	128
5.4.1 Algebraic Methods .....	130
5.4.2 Linguistic Methods.....	135
5.5 Problems .....	137
<b>6. Beams and Plates: The Work of Rozvany .....</b>	<b>139</b>
6.1 Introduction.....	139
6.1.1 Examples .....	140
6.1.2 Reaction Costs.....	143
6.1.3 Optimal Segmentation.....	144

6.1.4 A More Realistic Beam Model.....	145
6.2 Design of Plates .....	146
6.3 Problems .....	149
<b>7. Some Problems of Dynamic Structural Optimization.....</b>	<b>151</b>
7.1 Introduction .....	151
7.2 Optimization for Transient Vibrations.....	152
7.2.1 The Static Case.....	154
7.2.2 The Dynamic Case .....	154
7.2.3 The Work of Connor .....	160
7.2.3.1 Tuned Mass Dampers .....	161
7.3 Steady-State Problems .....	162
7.3.1 A Truss Problem.....	165
7.3.2 An Algorithm for the Truss Problem.....	166
7.3.3 An Incremental Solution of the Truss Problem .....	171
<b>8. Multicriteria Optimization .....</b>	<b>175</b>
8.1 Introduction .....	175
8.2 Solving Multicriteria Optimization Problems.....	177
<b>9. Practical Matters: The Work of Farkas and Jarmai.....</b>	<b>179</b>
9.1 Introduction .....	179
9.2 Sizing Member Cross Sections .....	179
9.2.1 Effect of Fabrication Costs.....	181
9.3 Tubular Trusses .....	182
9.3.1 The Effect of Shape.....	184
9.4 Problems .....	186
<b>10. On Going Work .....</b>	<b>187</b>
10.1 Design of Tall Buildings.....	187
10.1.1 Wind Loads on Tall Buildings.....	187
10.1.2 Tuned Mass Dampers .....	188
10.1.3 Stochastic Processes .....	189
10.2 Heuristic Algorithms .....	192
10.3 Extending the Design Process.....	193
10.4 Design Theory .....	193
10.4.1 Robust Design .....	194
10.4.2 Creativity in Design .....	194
10.4.3 Design Ontologies .....	195
10.4.4 Architectural Design .....	195
10.5 Available Computational Algorithms.....	195
<b>A. Using the Computer .....</b>	<b>197</b>
A.1 Using Computer Languages and Programs.....	197
A.1.1 Fortran .....	197

A1.2 Perl .....	199
A1.3 Makefiles .....	199
A.2 Matlab .....	199
A.3 Microsoft Excel.....	200
A.3.1 The Solver Routine.....	200
A.3.2 Visual Basic.....	203
A.5 Freeware.....	205
A.6 Graphical Interface Applications .....	205
<b>B. The Node Method for Trusses .....</b>	<b>207</b>
B.1 Introduction.....	207
B.2 A Formal Description of the Truss Problem .....	208
B.3 A Decomposition .....	212
<b>C. Convex Sets and Functions: Homogeneous Functions .....</b>	<b>219</b>
C.1 Convex Sets and Functions.....	219
C.2 Homogeneous Functions.....	220
<b>D. Structural Optimization Classics .....</b>	<b>223</b>
D.1 Michell Trusses.....	223
D.2 Keller’s Optimal Column.....	233
D.3 The Paper of Venkayya, Khot, and Berke.....	245
<b>References .....</b>	<b>289</b>
<b>Index .....</b>	<b>299</b>
