<b>I</b>	<b>Introduction and Motivation of the Fatigue Problem</b>	<b>1</b>
<b>1</b>	<b>An Overview of Fatigue Problems</b>	<b>3</b>
1.1	Introduction . . . . .	4
1.2	Models with dimensionless variables . . . . .	4
1.3	S-N or Wöhler curves . . . . .	6
1.3.1	Compatibility condition of $N^* \Delta\sigma$ and $\Delta\sigma N^*$ . . . . .	9
1.3.2	Statistical considerations . . . . .	11
1.4	$\varepsilon$ -N curves . . . . .	12
1.5	Stress level effect . . . . .	13
1.5.1	Compatibility condition of S-N curves for constant $\sigma_m^*$ and S-N curves for constant $\sigma_M^*$ . . . . .	14
1.6	Crack growth curves . . . . .	16
1.6.1	Crack growth curves for a constant stress pair $T^*$ . . . . .	18
1.6.2	Crack growth curves for a varying stress pair $T^*$ . . . . .	20
1.6.3	Compatibility of crack growth and S-N models . . . . .	22
1.7	Crack growth rate curves . . . . .	22
1.8	Size effect . . . . .	25
1.9	Normalization . . . . .	26
1.9.1	Percentile based normalizations . . . . .	26
1.9.2	Stress range and lifetime based normalizations . . . . .	29
1.9.3	Extended percentile normalization . . . . .	30
1.10	Damage measures and damage accumulation . . . . .	31
<b>II</b>	<b>Models Used in the Stress Based Approach</b>	<b>33</b>
<b>2</b>	<b>S-N or Wöhler Field Models</b>	<b>35</b>
2.1	Introduction . . . . .	36
2.2	Dimensional analysis . . . . .	38
2.3	Extreme models in fatigue . . . . .	41
2.3.1	The Weibull model . . . . .	41
2.3.2	The minimal Gumbel model . . . . .	42
2.4	Model for constant stress range and level . . . . .	43
2.4.1	Derivation of the model . . . . .	43

2.4.2	Parameter estimation . . . . .	45
2.4.3	Alternative methods for dealing with run-outs . . . . .	48
2.5	Model for varying range and given stress level . . . . .	49
2.5.1	Derivation of the model . . . . .	49
2.5.2	Some weaknesses of the proposed model . . . . .	53
2.5.3	Parameter estimation . . . . .	55
2.5.4	Use of the model in practice . . . . .	56
2.5.5	Example of application . . . . .	57
2.6	Model for varying stress range and level . . . . .	59
2.7	Dimensional Weibull and Gumbel models . . . . .	64
2.8	Properties of the model . . . . .	65
2.8.1	Parameter estimation . . . . .	69
2.8.2	Use of the model in practice . . . . .	71
2.8.3	Example of applications . . . . .	72
2.9	Concluding remarks . . . . .	84
2.10	Appendix A: Derivation of the general model . . . . .	85
2.11	Appendix B: S-N curves for the general model . . . . .	89
<b>3</b>	<b>Length Effect</b>	<b>91</b>
3.1	Introduction . . . . .	91
3.2	Modeling the S-N field for different lengths . . . . .	95
3.2.1	A previous example . . . . .	95
3.2.2	General model for different lengths . . . . .	97
3.2.3	Parameter estimation . . . . .	98
3.3	Examples of Application . . . . .	100
3.3.1	Prestressing wires . . . . .	100
3.3.2	Prestressing strands . . . . .	105
<b>III</b>	<b>Models Used in the Strain Based Approach</b>	<b>111</b>
<b>4</b>	<b>Log-Weibull <math>\epsilon</math>-N Model</b>	<b>113</b>
4.1	Introduction . . . . .	113
4.2	Model for constant strain range and level . . . . .	116
4.2.1	Practical example . . . . .	119
4.3	Model for varying strain range and level . . . . .	119
4.4	Converting strain- into stress-life curves . . . . .	121
4.4.1	Practical example . . . . .	123
4.5	Concluding remarks . . . . .	124
<b>IV</b>	<b>Models Used in the Fracture Mechanics Approach</b>	<b>127</b>
<b>5</b>	<b>Crack Growth Models</b>	<b>129</b>
5.1	Introduction and motivation . . . . .	129
5.2	Building crack growth models . . . . .	131

5.3	Crack growth curves approach I . . . . .	135
5.3.1	Crack growth curves for constant $\Delta\sigma^*$ and $\sigma_\ell^*$ . . . . .	135
5.3.2	Crack growth curves for varying $\Delta\sigma^*$ and $\sigma_\ell^*$ . . . . .	138
5.3.3	Compatibility of crack growth and S-N models . . . . .	141
5.4	Crack growth curves approach II . . . . .	144
5.4.1	Crack growth curves for constant $\Delta\sigma^*$ and $\sigma_\ell^*$ . . . . .	144
5.4.2	Crack growth curves for varying $\Delta\sigma^*$ and $\sigma_\ell^*$ . . . . .	146
5.4.3	Statistical distributions of $a^* N^*$ and $N^* a^*$ . . . . .	149
5.4.4	Learning and estimating the model . . . . .	152
5.4.5	Compatibility of approaches I and II . . . . .	153
5.5	Example of application . . . . .	154
5.6	Summary and future work . . . . .	156
 <b>V Damage and Damage Accumulation Models</b>		<b>159</b>
<b>6</b>	<b>Damage Measures</b>	<b>161</b>
6.1	Introduction . . . . .	161
6.2	Normalization . . . . .	165
6.3	Damage measures . . . . .	167
6.3.1	Some requirements for a damage measure . . . . .	167
6.3.2	Some damage measures . . . . .	168
6.4	Concluding remarks . . . . .	174
<b>7</b>	<b>Damage Accumulation</b>	<b>175</b>
7.1	Damage accumulation . . . . .	175
7.1.1	Accumulated damage after a constant stress range load step	180
7.1.2	Accumulated damage after block loading . . . . .	181
7.1.3	Fatigue under a general loading history . . . . .	182
7.1.4	Random loading . . . . .	186
7.2	Crack growth damage for any load history . . . . .	186
 <b>VI Appendices</b>		<b>191</b>
<b>A</b>	<b>Models Used in Fatigue</b>	<b>193</b>
A.1	Introduction . . . . .	193
A.2	S-N curve models . . . . .	196
A.2.1	The Wöhler model . . . . .	196
A.2.2	The Basquin model . . . . .	198
A.2.3	The Strohmeier model . . . . .	199
A.2.4	The Palmgren model . . . . .	199
A.2.5	The Stüssi model . . . . .	200
A.2.6	The Weibull model . . . . .	200
A.2.7	The Spindel and Haibach model . . . . .	200
A.2.8	The Kohout and Vechet model . . . . .	201

A.3	Stress field models . . . . .	202
A.3.1	The Pascual and Meeker model . . . . .	202
A.3.2	The Bastenaire model . . . . .	202
A.3.3	The Castillo et al. (1985) model . . . . .	204
A.4	Fatigue limit models . . . . .	205
A.4.1	The up-and-down method . . . . .	205
<b>B</b>	<b>Notation Used in This Book</b>	<b>213</b>
