Contents

Preface ..... *v*
Acknowledgments ..... *vii*
Contributors ..... *xi*

1 Study Design: The Basics
Hyun Ja Lim and Raymond G. Hoffmann ***1***

2 Observational Study Design
Raymond G. Hoffmann and Hyun Ja Lim ***19***

3 Descriptive Statistics
Todd G. Nick ***33***

4 Basic Principles of Statistical Inference
Wanzhu Tu ***53***

5 Statistical Inference on Categorical Variables
Susan M. Perkins ***73***

6 Development and Evaluation of Classifiers
Todd A. Alonzo and Margaret Sullivan Pepe ***89***

7 Comparison of Means
Nancy Berman ***117***

8 Correlation and Simple Linear Regression
Lynn E. Eberly ***143***

9 Multiple Linear Regression
Lynn E. Eberly ***165***

10 General Linear Models
Edward H. Ip ***189***

11 Linear Mixed Effects Models
Ann L. Oberg and Douglas W. Mahoney ***213***

12 Design and Analysis of Experiments
Jonathan J. Shuster ***235***

13 Analysis of Change
James J. Grady ***261***

14 Logistic Regression
Todd G. Nick and Kathleen M. Campbell ***273***

15 Survival Analysis
Hongyu Jiang and Jason P. Fine ***303***

16 Basic Bayesian Methods
Mark E. Glickman and David A. van Dyk ***319***

17 Overview of Missing Data Techniques
Ralph B. D'Agostino, Jr. ***339***

18 Statistical Topics in the Laboratory Sciences
Curtis A. Parvin ***353***

19 Power and Sample Size
L. Douglas Case and Walter T. Ambrosius ***377***

20 Microarray Analysis
Grier P. Page, Stanislav O. Zakharkin, Kyoungmi Kim, Tapan Mehta, Lang Chen, and Kui Zhang ***409***

21 Association Methods in Human Genetics
Carl D. Langefeld and Tasha E. Fingerlin ***431***

22 Genome Mapping Statistics and Bioinformatics
Josyf C. Mychaleckyj ***461***

23 Working with a Statistician
Nancy Berman and Christina Gullíon ***489***

Index ***505***
