Contents

Lists of Contributors and Project Partners..... xvii

1 Introduction..... **1**
P.Brewin, O.Coube, P.Doremus and J.H.Tweed
1.1 Treatment of Main Subjects in Compaction Modelling..... 2
1.2 Summaries of Individual Chapters.. 2

2 Modelling and Part Manufacture..... **7**
P.Brewin, O.Coube, J.A.Calero, H.Hodgson, R.Maassen and M.Satur
2.1 Introduction 7
2.2. Requirements for Improving the PM Production Process 8
2.2.1 Introduction..... 8
2.2.2 Selection of Powder Blends..... 10
2.2.3 Tooling Design 14
2.2.4 Press Selection..... 17
2.2.5 Production and Quality Control..... 18
2.2.6 Sintering and Infiltration..... 18
2.3 Requirements for Compaction Modelling 19
2.3.1 Input-Data Generation 19
2.3.2 Modelling and Part Manufacture: Requirements of the Hardmetal Industry ("HM") 21
2.3.3 Modelling and Parts Manufacture: Requirements of Ferrous Structural ("FS") Parts Industry 24
2.3.4 Validation 26
References…… 28

3 Mechanics of Powder Compaction 31
A.C.F.Cocks
3.1 Introduction 31
3.2 Uniaxial Deformation 32
3.3 Deformation under Multiaxial States of Stress 34
References..... 41

4 Compaction Models 43
A.C.F.Cocks, D.T.Gethin, H.-Å. Häggblad, T.Kraft and O.Coube
4.1 Micromechanical Compaction Models 43
4.1.1 Stage 0 Models 44
4.1.2 Stage 1 Models 46
4.1.3 Stage 2 Models 54
4.2 Phenomenological Compaction Models 55
4.2.1 Introduction..... 55
4.2.2 Cap Model 57
4.2.3 Cam-Clay Model..... 59
4.3 Closure….. 62
References…… 62

5 Model Input Data – Elastic Properties..... 65
M.D.Riera, J.M.Prado and P.Doremus
5.1 Introduction 65
5.2 Elastic Model 65
5.3 Experimental Techniques 68
5.3.1 Characterisation of Elastic Properties of Green Compacted Samples 68
5.3.2 Characterisation of Elastic Properties at High Stresses 73
5.4 Conclusions 76
References…… 76

6 Model Input Data – Plastic Properties..... 77
P.Doremus
6.1 Introduction 77
6.2 Closed-Die Compaction Test..... 77
6.2.1 Discussion of Assumptions A1,A2,A3 83
6.2.2 Influence of the Sample Aspect Ratio on Experimental Results..... 85
6.3 Powder Characterisation from Triaxial Test..... 88
6.4 Concluding Comments 92
References…… 93

7 Model Input Data – Failure 95
P.Doremus
7.1 Introduction 95
7.2 Tensile Test 96
7.3 Diametral Compression Test..... 98
7.4 Simple Compression Test 100

7.5 Concluding Comments 103
References..... 103

8 Friction and its Measurement in Powder-Compaction Processes 105
D.T.Gethin, N.Solimanjad, P.Doremus and D.Korachkin
8.1 Introduction 105
8.2 Friction Measurement by an Instrumented Die 107
8.3 Friction Measurement by a Shear Plate 111
8.4 Example Measurements 112
8.4.1 Instrumented-Die Measurements 112
8.4.2 Shear-Plate Experiments 115
8.5 Factors that Affect Friction Behaviour 118
8.5.1 Surface Properties 118
8.5.2 Compact and Process Influences 122
8.6 Other Friction Measurement Methods 125
8.7 Relevant Bibliography 127
8.8 Concluding Comments 127
References..... 128
Chapter Bibliography 128

9 Die Fill and Powder Transfer 131
S.F.Burch, A.C.F.Cocks, J.M.Prado and J.H.Tweed
9.1 Introduction 131
9.2 Potential Sigificance of Die Fill Density Distribution 132
9.3 Die-Filling Rig 133
9.4 The Flow Behaviour of Powder into Dies Containing Step-like Features 136
9.5 Metallographic Techniques for Determining Density Variations 139
9.6 Measurement of Die Fill Density Distribution
by X-Ray Computerised Tomography 140
9.6.1 Hardware Components Needed for X-Ray CT 141
9.6.2 Technique for the Quantitative Measurement of Density Variations 142
9.6.3 Results for Die fill Density Distribution
Using X-Ray Computerised Tomography 143
9.7 Modelling of Die Filling 146
9.8 Concluding Comments 149
References 149

10 Calibration of Compaction Models 151
P.Doremus
10.1 Introduction 151
10.2 Calibration of the Drucker-Prager Cap Model 151
10.2.1 Elasticity 151
10.2.2 Calibration of Yield Stress Surface and Plastic Strain.
Method Based on Simple Tests 152
10.3 Calibration of the Cam-Clay Model 158
10.4 Calibration of the Drucker-Prager Cap Model from Triaxial Data 159
10.5 Comparison of the Two Calibrations 161

10.6 Concluding Comments 163
References 163

11 Production of Case-Study Components 165
T.Kranz, W.Markeli and J.H.Tweed
11.1 Introduction 165
11.2 Press Instrumentation for Force and Displacement 166
11.2.1 Punch Force 166
11.2.2 Punch Travel 169
11.3 Side Effects of Load Buildup – Press and Punch Deflections 171
11.3.1 Press Deflections 171
11.3.2 Punch Deflections 173
11.3.3 Implications for the Acquired Position Values 176
11.3.4 Concluding Comments on System Deflections 177
11.4 Case-Study Components 177
References 178

12 Assessing Powder Compacts 179
S.F.Burch, J.A.Calero, M.Eriksson, B.Hoffman, A.Leuprecht, R.Maassen, F.M.M.Snijkers, W.Vandermeulen and J.H.Tweed
12.1 Introduction 179
12.2 Density Distribution by the Archimedes Method 180
12.2.1 Hardmetals 180
12.2.2 Zirconia and Sm-Co Samples 181
12.3 Density Determination by Machining 185
12.4 Density Distribution Determined by SEM-EDS Line Scan of Polished Cross-Sections 187
12.4.1 General Considerations on Density Measurements of Green Samples 187
12.4.2 Samples 188
12.4.3 Experimental Procedure 188
12.4.4 SEM-EDS Method to Determine Density Distribution 189
12.4.5 Results 189
12.4.6 Discussion and Conclusion 190
12.5 Density Determination by X-ray Computerised Tomography 190
12.6 Comparison of Result of Density Distribution Measurement Techniques 192
12.7 Determination of Defect Distribution 193
12.8 Concluding Comments 195
References 195

13 Case Studies: Discussion and Guidelines 197
O.Coube and P.Jonsén
13.1 Introduction 197
13.2 Constitutive Parameters Sensitivity 198
13.2.1 Case Study 3 198
13.2.2 Constitutive Model used for the Parameter Study 199
13.2.3 Influence of the Constitutive Parameter R 200

13.2.4 Influence of the Hardening for High Density Values 202
13.2.5 Looking for Good Agreement with Experimental Values 205
13.2.6 Discussion 207
13.3 Framework for the Numerical Simulation 207
13.4 Influence of Meshing 211
13.5 Influence of the Initial and Process Data 212
13.5.1 Reference Case 213
13.5.2 Influence of the Fill Density Distribution 214
13.5.3 Influence of the Punch Kinematics 217
13.5.4 Discussion 220
13.6 Conclusions and Guideline 221
References 222

14 Modelling Die Compaction in the Pharmaceutical Industry 223
I.C.Sinka and A.C.F.Cocks
14.1 Introduction 223
14.2 Pharmaceutical Formulations and Processes 225
14.3 Rotary Tablet Press Production Cycle 226
14.3.1 Die Fill on Rotary Presses 227
14.3.2 Compression and Ejection 229
14.4 Tablet Compaction Modelling 230
14.4.1 Material Characterisation for Model Input 230
14.4.2 Friction 233
14.5 Case Studies 234
14.5.1 Case Study 1: The Density Distribution in Curved-Faced Tablets 235
14.5.2 Case Study 2: The Density Distribution in Bi-layer Tablets 237
14.5.3 Case Study 3: The Density Distribution in Compression Coated Tablets 239
14.6 Summary and Conclusions 240
14.7 Acknowledgements 241
References 241

15 Applications in Industry 243
P.Brewin, O.Coube, D.T.Gethin, H.Hodgson and S.Rolland
15.1 Numerical Simulation of Die Compaction and Sintering of Hardmetal Drill Tips 243
15.1.1 Summary 243
15.1.2 Introduction 244
15.1.3 Numerical Simulation of Die Compaction 244
15.1.4 Numerical Simulation of Sintering 248
15.1.5 Discussion and Conclusions 251
15.2 Ceramic Case Studies 252
15.3 Concluding Comments 258
References 258

A.1 Appendix 1 – Compaction Model Input Data for Powders 259
A.1.1 Distaloy AE Powder 259
A.1.2 WC-Co Powder 266
A.1.3 Zirconia Powder. Low- and High-Pressure Closed Die Compaction 275
A.1.4 Samarium Cobalt Powder Low- and High- Pressure Closed Die Compaction 286
References 292

A.2 Appendix 2 – Case Study Components 295
A.2.1 Introduction 295
A.2.2 Data for Case Study Components 296
