List of Contributors	xxiii
1. Like Two Peas in a Pod	
<i>B.G. Batchelor</i>	1
Editorial Introduction	1
1.1 Advantages of Being Able to See.....	3
1.2 Machine Vision	4
1.2.1 Model for Machine Vision Systems.....	6
1.2.2 Applications Classified by Task.....	9
1.2.3 Other Applications of Machine Vision	11
1.2.4 Machine Vision Is Not Natural	12
1.3 Product Variability	12
1.3.1 Linear Dimensions	13
1.3.2 Shape.....	16
1.3.3 Why Physical Tolerances Matter	17
1.3.4 Flexible and Articulated Objects.....	20
1.3.5 Soft and Semi-fluid Objects	21
1.3.6 Colour Variations.....	22
1.3.7 Transient Phenomena	26
1.3.8 Very Complex Objects.....	27
1.3.9 Uncooperative Objects.....	28
1.3.10 Texture	28
1.4 Systems Issues	30
1.5 References	32
2. Basic Machine Vision Techniques	
<i>B.G. Batchelor and P.F. Whelan</i>	35
Editorial Introduction	35
2.1 Representation of Images	37
2.2 Elementary Image Processing Functions.....	39
2.2.1 Monadic Point-by-point Operators	40
2.2.2 Dyadic Point-by-point Operators	42
2.2.3 Local Operators.....	43
2.2.4 Linear Local Operators	44

2.2.5	Non-linear Local Operators.....	47
2.2.6	N-tuple Operators.....	51
2.2.7	Edge Effects	52
2.2.8	Intensity Histogram [<i>hpi, hgi, he, hgc</i>]	52
2.3	Binary Images.....	53
2.3.1	Measurements on Binary Images	61
2.3.2	Shape Descriptors	62
2.4	Binary Mathematical Morphology	63
2.4.1	Opening and Closing Operations	65
2.4.2	Structuring Element Decomposition	66
2.5	Grey-scale Morphology.....	68
2.6	Global Image Transforms.....	70
2.6.1	Hough Transform.....	71
2.6.2	Two-dimensional Discrete Fourier Transform.....	73
2.7	Texture Analysis.....	76
2.7.1	Statistical Approaches.....	76
2.7.2	Co-occurrence Matrix Approach.....	77
2.7.3	Structural Approaches.....	80
2.7.4	Morphological Texture Analysis.....	80
2.8	Implementation Considerations.....	80
2.8.1	Morphological System Implementation	81
2.9	Commercial Devices.....	81
2.9.1	Plug-in Boards: Frame-grabbers	82
2.9.2	Plug-in Boards: Dedicated Function	83
2.9.3	Self-contained Systems	83
2.9.4	Turn-key Systems.....	83
2.9.5	Software	84
2.10	Further Remarks.....	84
2.11	References	84
3.	Intelligent Image Processing	
	<i>B.G. Batchelor</i>	87
	Editorial Introduction	87
3.1	Why We Need Intelligence	89
3.2	Pattern Recognition	89
3.2.1	Similarity and Distance	90
3.2.2	Compactness Hypothesis	92
3.2.3	Pattern Recognition Models.....	93
3.3	Rule-based Systems.....	101
3.3.1	How Rules are Used.....	101
3.3.2	Combining Rules and Image Processing.....	102
3.4	Colour Recognition	111
3.4.1	RGB Representation.....	111
3.4.2	Pattern Recognition.....	112
3.4.3	Programmable Colour Filter.....	112
3.4.4	Colour Triangle	113

3.5	Methods and Applications.....	114
3.5.1	Human Artifacts.....	117
3.5.2	Plants.....	121
3.5.3	Semi-processed Natural Products	126
3.5.4	Food Products	131
3.6	Concluding Remarks	138
3.7	References	139
4.	Using Natural Phenomena to Aid Food Produce Inspection	
	<i>G. Long</i>	141
	Editorial Introduction	141
4.1	Introduction	143
4.2	Techniques to Exploit Natural Phenomena	145
4.3	Potato Sizing and Inspection	147
4.4	Stone Detection in Soft Fruit Using Auto-fluorescence.....	149
4.5	Brazil Nut Inspection.....	152
4.6	Intact Egg Inspection.....	152
4.7	Wafer Sizing.....	156
4.8	Enrobed Chocolates.....	158
4.9	Conclusion.....	160
4.10	References	161
5.	Colour Sorting in the Food Industry	
	<i>S.C. Bee and M.J. Honeywood</i>	163
	Editorial Introduction	163
5.1	Introduction	165
5.2	The Optical Sorting Machine	165
5.2.1	The Feed System.....	166
5.2.2	The Optical System	166
5.2.3	The Ejection System	167
5.2.4	The Image Processing Algorithms	167
5.3	Assessment of Objects for Colour Sorting	167
5.3.1	Spectrophotometry	168
5.3.2	Monochromatic Sorting	170
5.3.3	Bichromatic Sorting	170
5.3.4	Dual Monochromatic Sorting.....	171
5.3.5	Trichromatic Sorting	171
5.3.6	Fluorescence Techniques	172
5.3.7	Infrared Techniques	172
5.3.8	Optical Sorting with Lasers.....	172
5.4	The Optical Inspection System.....	173
5.4.1	Illumination.....	173
5.4.2	Background and Aperture	176
5.4.3	Optical Filters.....	176
5.4.4	Detectors	178
5.5	The Sorting System	179
5.5.1	Feed.....	179

5.5.2	Ejection	180
5.5.3	Cleaning and Dust Extraction	182
5.5.4	The Electronic Processing System	183
5.6	The Limitations of Colour Sorting	187
5.7	Future Trends	188
5.8	References	189
6.	Surface Defect Detection on Ceramics	
	<i>A.K. Forrest</i>	191
	Editorial Introduction	191
6.1	The Problem	193
6.2	Oblique Imaging.....	194
6.2.1	Oblique Lighting.....	194
6.2.2	Oblique Viewing.....	194
6.2.3	Image Rectification	195
6.2.4	Properties of Tile Surface.....	200
6.2.5	A Practical System	202
6.3	Obtaining More Information: Flying Spot Scanner.....	203
6.3.1	Introduction.....	203
6.3.2	Optical Layout.....	204
6.3.3	Detector Requirements.....	206
6.4	Image Processing of Multi-channels	209
6.5	Conclusion.....	212
6.6	References	213
7.	On-line Automated Visual Grading of Fruit: Practical Challenges	
	<i>P. Ngan, D. Penman and C. Bowman</i>	215
	Editorial Introduction	215
7.1	Introduction	217
7.2	Complete Surface Imaging	218
7.2.1	Introduction.....	218
7.2.2	Surface Feature Tracking.....	219
7.3	Stem/Calyx Discrimination	225
7.3.1	Concavity Detection Using Light Stripes.....	226
7.3.2	A New Approach to Structured Lighting	230
7.4	Conclusion.....	236
7.5	Acknowledgements	237
7.6	References	237
8.	Vision-based Quality Control in Poultry Processing	
	<i>W. Daley and D. Britton</i>	241
	Editorial Introduction	241
8.1	Introduction	243
8.2	Poultry Grading Application	244
8.2.1	Soft Computing: Fuzzy Logic and Neural Networks.....	245
8.2.2	Fuzzy Logic.....	246
8.2.3	Neural Networks	247

8.3	Algorithm Development	248
8.4	Bruise Detection	249
8.5	Fuzzy Logic Approach	249
8.6	The Minimum Distance Classifier	252
8.7	Comparing the Fuzzy Logic to the Minimum Distance Classifier Approach	253
8.8	Comparison with Human Operators	254
8.9	The Future	256
8.10	Conclusion	257
8.11	Acknowledgements	257
8.12	References	258
9.	Quality Classification of Wooden Surfaces Using Gabor Filters and Genetic Feature Optimisation	
	<i>W. Pölzleitner</i>	259
	Editorial Introduction	259
9.1	Introduction	261
	9.1.1 Problem Statement	263
	9.1.2 Algorithmic Approach	263
	9.1.3 Trade-offs	265
9.2	Gabor Filters	265
	9.2.1 Gabor Wavelet Functions	266
9.3	Optimisation Using a Genetic Algorithm	267
9.4	Experiments	271
9.5	Conclusion	276
9.6	References	276
10.	An Intelligent Approach to Fabric Defect Detection in Textile Processes	
	<i>M. Mufti, G. Vachtsevanos and L. Dorrity</i>	279
	Editorial Introduction	279
10.1	Introduction	281
10.2	Architecture	283
10.3	Fuzzy Wavelet Analysis	286
10.4	Fuzzy Inferencing	289
10.5	Performance Metrics	290
10.6	Degree of Certainty	291
10.7	Reliability Index	291
10.8	Detectability and Identifiability Measures	293
10.9	Learning	293
10.10	Practical Implementation of Fuzzy Wavelet Analysis	294
10.11	Loom Control	300
10.12	Commercial Implementation	300
10.13	Conclusions	302
10.14	Acknowledgement	303
10.15	References	303

11. Automated Cutting of Natural Products: A Practical Packing Strategy	
<i>P.F. Whelan</i>	305
Editorial Introduction	305
11.1 Introduction	307
11.2 The Packing/Cutting Problem	308
11.2.1 The One-dimensional Packing Problem.....	309
11.2.2 The Two-dimensional Packing Problem.....	309
11.2.3 The Three-dimensional Packing Problem.....	309
11.3 Review of Current Research.....	310
11.3.1 Packing of Regular Shapes	311
11.3.2 Packing of Irregular Shapes	311
11.4 System Implementation	313
11.4.1 Geometric Packer: Implementation.....	315
11.4.2 Heuristic Packer: Implementation.....	317
11.5 Performance Measures	320
11.6 System Issues.....	322
11.6.1 Packing Scenes with Defective Regions	322
11.7 Packing of Templates on Leather Hides.....	322
11.7.1 Packing of Templates on Defective Hides	324
11.7.2 Additional Points on Packing in the Leather Industry	325
11.8 Conclusion.....	326
11.9 References	326
12. Model-based Stereo Imaging for Estimating the Biomass of Live Fish	
<i>R.D. Tillett, J.A. Lines, D. Chan, N.J.B. McFarlane and L.G. Ross</i>	331
Editorial Introduction	331
12.1 Introduction	333
12.2 Typical Sea-cage Images	333
12.3 Stereo Image Collection	334
12.3.1 Stereo Cameras.....	334
12.3.2 Calibration.....	335
12.3.3 Accuracy Achieved.....	336
12.3.4 Tank-based Trials.....	337
12.4 Locating Fish with a Trainable Classifier.....	338
12.5 Taking Measurements Using a Model-based Approach	341
12.6 Estimating Fish Mass	343
12.7 Conclusions	344
12.8 References	345
13. A System for Estimating the Size and Shape of Live Pigs	
<i>J.A. Marchant and C.P. Schofield</i>	347
Editorial Introduction	347
13.1 Introduction	349
13.2 Description of the System	350
13.3 Calibration	351
13.3.1 General Method.....	351
13.3.2 Lense Distortion.....	352

13.3.3	Magnification	352
13.3.4	Curvature of the Animal's Surface	354
13.4	Image Analysis	356
13.4.1	Image Preparation	356
13.4.2	Initial and Improved Boundary	356
13.4.3	Division into Rump and Abdomen	357
13.4.4	Shoulder Estimation	358
13.4.5	Quality Control Checks	358
13.5	Experiments and Results	359
13.5.1	Experimental Arrangement	359
13.5.2	Initial Filtering of the Data	359
13.5.3	Image Analysis Repeatability	360
13.5.4	Relationship with Weight	361
13.6	Commercial Development	363
13.7	Conclusions	364
13.8	References	365
14.	Sheep Pelt Inspection	
	<i>P. Hilton, W. Power, M. Hayes and C. Bowman</i>	367
	Editorial Introduction	367
14.1	Introduction	369
14.2	Pelt Defects	370
14.3	Pelt Grading System	371
14.3.1	Laser Imaging	372
14.3.2	Laser Imager	373
14.3.3	Pelt Images	375
14.3.4	Processing System Architecture	377
14.3.5	Trials	378
14.4	Automated Defect Recognition and Classification	379
14.4.1	Defect Appearance	379
14.4.2	Supervised Learning	383
14.5	Pelt Identification	385
14.5.1	Pelt Branding	386
14.5.2	The Code Structure	387
14.5.3	Automated Code Reading	388
14.6	Conclusion and Future Work	390
14.7	Acknowledgements	391
14.8	References	391
15.	Design of Object Location Algorithms and Their Use for Food and Cereals Inspection	
	<i>E.R. Davies</i>	393
	Editorial Introduction	393
15.1	Introduction	395
15.2	The Inspection Milieu	397
15.3	Object Location	398
15.3.1	Feature Detection	398

15.3.2	The Hough Transform.....	400
15.3.3	The Maximal Clique Graph Matching Technique	401
15.4	Case Study: Jaffa Cake Inspection	403
15.5	Case Study: Inspection of Cream Biscuits.....	404
15.5.1	Problems with Maximal Cliques	405
15.6	Case Study: Location of Insects in Consignments of Grain	406
15.7	Case Study: Location of Non-insect Contaminants in Consignments of Grain	409
15.7.1	Problems with Closing	412
15.8	Case Study: High-speed Grain Location	413
15.9	Design of Template Masks	416
15.10	Concluding Remarks	417
15.11	Acknowledgements	418
15.12	References	419
16.	X-ray Bone Detection in Further Processed Poultry Production	
	<i>M. Graves</i>	421
	Editorial Introduction	421
16.1	Introduction	423
16.2	The Extent of the Problem.....	424
16.2.1	Data for the Occurrence of Bones in Poultry Meat.....	424
16.2.2	Future Trends Which Will Increase the Problem.....	424
16.3	The Technical Challenge	425
16.3.1	Attempts to Homogenise the Poultry Product.....	426
16.4	The BoneScan™ Solution.....	427
16.4.1	Design Requirements	427
16.4.2	Accuracy of Bone Detection	427
16.4.3	Low Level of False Rejection	431
16.4.4	Robustness of System Performance over Time.....	431
16.4.5	Cleanability of the System	432
16.4.6	High-volume Throughput	433
16.4.7	Ease of Use of the System.....	434
16.4.8	Robust Rejection Technology	434
16.4.9	Ability to Provide Management Information	436
16.4.10	Future Upgradability of the System	436
16.5	Applications Overview	437
16.5.1	The Inspection of Chicken Breast Butterflies	437
16.5.2	Chicken Thigh Meat Inspection	441
16.6	Stripped Cooked Chicken Meat Inspection	443
16.7	Future Work	447
16.8	Conclusions	447
16.9	Acknowledgements	448
16.10	References	448
17.	Final Remarks	
	<i>B.G. Batchelor and M. Graves</i>	451
17.1	General Comments	451

17.2 Proverbs.....	453
Index	459
