Part I Fuzzy Modeling

1	Fuzzy Modeling	3
1.1	Function Approximation	4
1.1.1	System Description	4
1.1.2	Approximation Error	6
1.1.3	Constructing Units in the Fuzzy Models	8
1.2	Approximation Capabilities of Takagi–Sugeno Fuzzy Models	18
1.3	Conclusion and Summary	20
2	Constructing Fuzzy Models from Input-Output Data	21
2.1	Mosaic or Table Lookup Scheme	22
2.1.1	Illustrative Example	25
2.2	Using Gradient Descent	26
2.2.1	Gradient Updating for Trapezoidal Membership Functions	30
2.2.2	Gradient Updating for Triangular Membership Functions with Overlap $\frac{1}{2}$	31
2.2.3	Gradient Updating for Polynomial Membership Functions	32
2.2.4	Gradient Updating for Polynomial Membership Functions with Overlap $\frac{1}{2}$ and $b_j^i = c_j^i = m_j^i$	33
2.2.5	Gradient Updating for Gaussian Membership Functions	34
2.2.6	Illustrative Example	34
2.3	Using Clustering and Gradient Descent	38
2.3.1	Algorithm for Mamdani Models	38
2.3.2	Algorithm for Takagi–Sugeno Models	39
2.3.3	Illustrative Example	39
2.4	Using Evolutionary Strategies	46

2.5	Generalization and Consequences Estimation	50
2.5.1	Consequence Initialization	50
2.5.2	Consequence Estimation	51
2.6	Example of an Industrial Application	55
2.7	Conclusions	58
3	Fuzzy Modeling with Linguistic Integrity: A Tool for Data Mining	59
3.1	Introduction	59
3.2	Structure of the Fuzzy Model	61
3.3	The AFRELI Algorithm	63
3.4	The FuZion Algorithm	68
3.5	Examples	71
3.5.1	Modeling a Two-Input Nonlinear Function	71
3.5.2	Modeling of a Three-Input Nonlinear Function	77
3.5.3	Predicting Chaotic Time Series	80
3.5.4	Modeling of the Quality Properties on a High-Density Polyethylene (HDPE) Reactor	85
3.6	Complexity of the AFRELI Algorithm	89
3.7	Conclusions	89
4	Nonlinear Identification Using Fuzzy Models	91
4.1	System Identification	92
4.2	Basic Structure of the Fuzzy System	93
4.3	Experiment Design for System Identification	95
4.4	Choosing the Regressors	98
4.4.1	Search Methods	98
4.4.2	Regressors Evaluation	101
4.5	Choosing the Structure	105
4.6	Calculating the Parameters	106
4.7	Validation	108
4.8	Example: Identification of the Box and Jenkins Gas Furnace Data Set	109
4.9	Identification of Takagi–Sugeno Fuzzy Models Using Local Linear Identification	118
4.10	Conclusions	119

Part II Fuzzy Control

5	Fuzzy Control	123
5.1	Model-Free Fuzzy Control	124
5.1.1	Heuristic Trial-and-Error Design	124
5.1.2	Design of PID-like Fuzzy Controllers	124
5.2	Model Based Fuzzy Control	129

5.2.1 Using Adaptive Methods 129

5.2.2 Using Direct Synthesis 134

5.3 Conclusions and Future Perspectives 146

6 Predictive Control Based on Fuzzy Models 151

6.1 The Predictive Control Strategy 152

6.2 Unconstrained Nonlinear Predictive Control 154

6.2.1 Estimation of the Step Response to Construct $\mathbf{G}(t)$... 157

6.2.2 Example Predictive Control of a CSTR Using a Fuzzy Model 158

6.3 Constrained Nonlinear Predictive Control 167

6.3.1 The Constrained Nonlinear Predictive Control Problem 168

6.3.2 Approach Using Estimated Step Response 173

6.3.3 Approach Using Takagi–Sugeno Fuzzy Models..... 177

6.3.4 Approach Using Takagi–Sugeno Fuzzy Models and Multiple Models in the Predictor 178

6.3.5 Example Predictive Control of a Steam Generator Using a Fuzzy Model 181

6.3.6 Example: Nonlinear Predictive Control of a Gas-Phase High-Density Polyethylene (HDPE) Reactor 187

6.4 Conclusions 191

7 Robust Nonlinear Predictive Control Using Fuzzy Models 195

7.1 Introduction 195

7.2 Robust Quadratic Programming 196

7.3 Problem Description 198

7.4 Nominal Solution 199

7.5 Formulation of the MPC Problem as a Robust QP 201

7.6 The Control Algorithm 202

7.7 Uncertainty Description in Fuzzy Models 202

7.7.1 Local Uncertainty Described on Each Rule 203

7.7.2 Using the Active Rules 204

7.7.3 Using All the Rules 204

7.7.4 Using the Reachable Set 205

7.8 Conclusions and Perspectives 205

8 Conclusions and Future Perspectives 207

8.1 Conclusions and Summary 207

8.2 Perspectives and Future Work 210

Part III Appendices

A	Fuzzy Set Theory	215
	A.1 Introduction	215
	A.2 Fuzzy Sets	215
	A.2.1 Some Examples of Membership Functions	215
	A.3 Basic Definitions of Fuzzy Sets	216
	A.3.1 Support	216
	A.3.2 Core	216
	A.3.3 Height	217
	A.3.4 Normal Fuzzy Set	217
	A.3.5 α -Cut	217
	A.3.6 Strict α -Cut	217
	A.3.7 Convexity	217
	A.4 Operations on Fuzzy Sets	217
	A.4.1 A Is Contained in B	217
	A.4.2 Complement, Negation	217
	A.4.3 Intersection	218
	A.4.4 Union	218
	A.5 Fuzzy relations	219
	A.5.1 Projection of Fuzzy Relations	220
	A.5.2 Composition of Relations	220
	A.6 Approximate Reasoning	220
	A.6.1 Introduction	220
	A.6.2 Linguistic Variables	221
	A.7 General Structure of a Fuzzy Inference System	221
	A.7.1 Control Rules as a Knowledge Representation	221
	A.7.2 Defuzzification	223
B	Clustering Methods	225
	B.1 Fuzzy C-Means [2]	225
	B.2 Using Fuzzy Covariance Matrix: Gustafson and Kessel Algorithm [3]	226
	B.3 Mountain Clustering [4]	228
C	Gradients Used in Identification with Fuzzy Models	231
	C.1 Gradient for the Singleton Consequences	231
	C.1.1 With Trapezoidal Membership Functions	232
	C.1.2 With Polynomial Membership Functions	233
	C.1.3 With Gaussian Membership Functions	233
	C.2 Gradient for the Parameters of the Membership Functions ...	234
	C.2.1 With Trapezoidal Membership Functions	234
	C.2.2 With Polynomial Membership Functions	235
	C.2.3 With Gaussian Membership Functions	237
	C.2.4 With Triangular Membership Functions with 0.5 Overlap	237

C.2.5	With Polynomial Membership Functions with 0.5 Overlap	239
D	Discrete Linear Dynamical System Approximation Theorem	243
E	Fuzzy Control for a Continuously Variable Transmission ...	247
E.1	Introduction and Process Description	247
E.2	Performance Specifications	248
E.3	A Physical Model for the CVT	249
E.4	Design of the Controller	251
E.5	Stability Analysis	252
E.6	Conclusions	253
References		255
Index		261
