## Part I Preliminaries

---

Introduction to Part I .....	3
<b>1 What Does “Control of Robots” Involve? .....</b>	<b>7</b>
1.1 Familiarization with the Physical System under Consideration. . . . .	8
1.2 Dynamic Model .....	10
1.3 Control Specifications .....	12
1.4 Motion Control of Robot Manipulators .....	12
Bibliography .....	15
<b>2 Mathematical Preliminaries .....</b>	<b>19</b>
2.1 Linear Algebra .....	20
2.2 Fixed Points .....	26
2.3 Lyapunov Stability .....	27
2.3.1 The Concept of Equilibrium .....	28
2.3.2 Definitions of Stability .....	31
2.3.3 Lyapunov Functions .....	40
2.3.4 Lyapunov’s Direct Method .....	44
Bibliography .....	53
Problems .....	54
<b>3 Robot Dynamics .....</b>	<b>59</b>

3.1	Lagrange's Equations of Motion . . . . .	62
3.2	Dynamic Model in Compact Form . . . . .	71
3.3	Dynamic Model of Robots with Friction . . . . .	75
3.4	Dynamic Model of Elastic-joint Robots . . . . .	77
3.5	Dynamic Model of Robots with Actuators . . . . .	82
	Bibliography . . . . .	88
	Problems . . . . .	90
<b>4</b>	<b>Properties of the Dynamic Model</b> . . . . .	<b>95</b>
4.1	The Inertia Matrix . . . . .	95
4.2	The Centrifugal and Coriolis Forces Matrix . . . . .	97
4.3	The Gravitational Torques Vector . . . . .	101
4.4	The Residual Dynamics . . . . .	102
4.5	Conclusions . . . . .	108
	Bibliography . . . . .	109
	Problems . . . . .	110
<b>5</b>	<b>Case Study: The Pelican Prototype Robot</b> . . . . .	<b>113</b>
5.1	Direct Kinematics . . . . .	115
5.2	Inverse Kinematics . . . . .	116
5.3	Dynamic Model . . . . .	119
5.3.1	Lagrangian Equations . . . . .	119
5.3.2	Model in Compact Form . . . . .	123
5.4	Desired Reference Trajectories . . . . .	128
	Bibliography . . . . .	131
	Problems . . . . .	131

---

**Part II Position Control**

---

<b>Introduction to Part II</b> . . . . .	<b>135</b>
Bibliography . . . . .	139
<b>6 Proportional Control plus Velocity Feedback and PD Control</b> . . . . .	<b>141</b>
6.1 Robots without Gravity Term . . . . .	143
6.2 Robots with Gravity Term . . . . .	146
6.2.1 Unicity of the Equilibrium . . . . .	146

6.2.2	Arbitrarily Bounded Position and Velocity Error . . . . .	148
6.3	Conclusions . . . . .	153
	Bibliography . . . . .	153
	Problems . . . . .	153
<b>7</b>	<b>PD Control with Gravity Compensation . . . . .</b>	<b>157</b>
7.1	Global Asymptotic Stability by La Salle's Theorem . . . . .	159
7.2	Lyapunov Function for Global Asymptotic Stability . . . . .	163
7.2.1	Positivity of the Lyapunov Function . . . . .	164
7.2.2	Time Derivative of the Lyapunov Function . . . . .	165
7.3	Conclusions . . . . .	167
	Bibliography . . . . .	167
	Problems . . . . .	168
<b>8</b>	<b>PD Control with Desired Gravity Compensation . . . . .</b>	<b>171</b>
8.1	Boundedness of Position and Velocity Errors, $\tilde{q}$ and $\dot{\tilde{q}}$ . . . . .	174
8.2	Unicity of Equilibrium . . . . .	180
8.3	Global Asymptotic Stability . . . . .	181
8.4	Lyapunov Function for Global Asymptotic Stability . . . . .	190
8.5	Conclusions . . . . .	195
	Bibliography . . . . .	195
	Problems . . . . .	196
<b>9</b>	<b>PID Control . . . . .</b>	<b>201</b>
9.1	Lyapunov Function Candidate . . . . .	207
9.2	Time Derivative of the Lyapunov Function Candidate . . . . .	209
9.3	Asymptotic Stability . . . . .	211
9.4	Tuning Procedure . . . . .	213
9.5	Conclusions . . . . .	216
	Bibliography . . . . .	217
	Problems . . . . .	218

---

**Part III Motion Control**

---

	<b>Introduction to Part III . . . . .</b>	<b>223</b>
<b>10</b>	<b>Computed-torque Control and Computed-torque+ Control</b>	<b>227</b>

10.1	Computed-torque Control	227
10.2	Computed-torque+ Control	232
10.3	Conclusions	237
	Bibliography	238
	Problems	239
<b>11</b>	<b>PD+ Control and PD Control with Compensation</b>	<b>243</b>
11.1	PD Control with Compensation	244
11.2	PD+ Control	248
11.2.1	Lyapunov Function for Asymptotic Stability	253
11.3	Conclusions	258
	Bibliography	259
	Problems	260
<b>12</b>	<b>Feedforward Control and PD Control plus Feedforward</b>	<b>263</b>
12.1	Feedforward Control	264
12.2	PD Control plus Feedforward	269
12.2.1	Unicity of the Equilibrium	271
12.2.2	Global Uniform Asymptotic Stability	273
12.3	Conclusions	282
	Bibliography	282
	Problems	284

---

## Part IV Advanced Topics

---

	<b>Introduction to Part IV</b>	<b>289</b>
<b>13</b>	<b>P“D” Control with Gravity Compensation and P“D” Control with Desired Gravity Compensation</b>	<b>291</b>
13.1	P“D” Control with Gravity Compensation	292
13.2	P“D” Control with Desired Gravity Compensation	300
13.3	Conclusions	307
	Bibliography	308
	Problems	309
<b>14</b>	<b>Introduction to Adaptive Robot Control</b>	<b>313</b>
14.1	Parameterization of the Dynamic Model	314

14.1.1	Linearity in the Dynamic Parameters . . . . .	315
14.1.2	The Nominal Model . . . . .	319
14.2	The Adaptive Robot Control Problem . . . . .	325
14.3	Parameterization of the Adaptive Controller . . . . .	327
14.3.1	Stability and Convergence of Adaptive Control Systems	329
	Bibliography . . . . .	331
	Problems . . . . .	334
<b>15</b>	<b>PD Control with Adaptive Desired Gravity Compensation</b>	<b>337</b>
15.1	The Control and Adaptive Laws . . . . .	338
15.2	Stability Analysis . . . . .	342
15.3	Examples . . . . .	349
15.4	Conclusions . . . . .	357
	Bibliography . . . . .	358
	Problems . . . . .	359
<b>16</b>	<b>PD Control with Adaptive Compensation</b> . . . . .	<b>361</b>
16.1	The Control and Adaptive Laws . . . . .	361
16.2	Stability Analysis . . . . .	365
16.3	Examples . . . . .	368
16.4	Conclusions . . . . .	377
	Bibliography . . . . .	377
	Problems . . . . .	378

---

**Appendices**

---

<b>A</b>	<b>Mathematical Support</b> . . . . .	<b>383</b>
A.1	Some Lemmas on Linear Algebra . . . . .	383
A.2	Vector Calculus . . . . .	384
A.3	Functional Spaces . . . . .	390
	Bibliography . . . . .	397
	Problems . . . . .	398
<b>B</b>	<b>Support to Lyapunov Theory</b> . . . . .	<b>401</b>
B.1	Conditions for Positive Definiteness of Functions . . . . .	401
<b>C</b>	<b>Proofs of Some Properties of the Dynamic Model</b> . . . . .	<b>407</b>

<b>D Dynamics of Direct-current Motors</b> .....	411
D.1 Motor Model with Linear Friction .....	416
D.2 Motor Model with Nonlinear Friction .....	417
Bibliography .....	418
<b>Index</b> .....	419
