Chapter 1. Epidemiology of osteoporosis (S. Becker and M. Ogon)	1
Incidence and prevalence of vertebral fractures	1
Sex differences	2
Socio-economic consequences	2
Chapter 2. Drug therapy of osteoporosis (H. Resch and C. Muschitz)	5
Pathogenic mechanism and pharmacological effects	5
Therapeutic goals	6
1) The treatment of pain	6
2) Reduction of the risk of fracture	6
3) Increase of bone density	6
4) Influencing biochemical markers of bone metabolism	6
Indication for osteoporosis therapy	7
Treatment options	7
Basic medication with calcium-vitamin D	7
Calcium	7
The combination of calcium with vitamin D	8
Hormone replacement therapy – a fundamental change in evaluation	8
Substances that inhibit bone absorption	9
Bisphosphonates	9
Selective estrogen-receptor modulators	10
Calcitonins	10
Tibolone	10
Substances that increase bone formation	10
Parathormone	10
Combination therapies	10
Parathormone and antiresorptives	11
Fluorides	11
Substances with a synchronous effect on bone formation and absorption	11
Substances with a biological effect	11
The RANKL antibody – new approaches in the treatment of osteoporosis	11
Osteoporosis in men	12
Prevention and therapy	12
Chapter 3. Clinical aspects and mortality risk of the osteoporotic spine fracture (S. Becker and M. Ogon)	17
Clinical diagnosis of spinal fracture	17
The clinical consequences of a spinal fracture	18
Mortality after fractures of the spine	19
Chapter 4. Biomechanics	23
Biomechanics of cement injection in vertebroplasty (G. Baroud and A. Schleyer)	23
Summary	23
Introduction	23
<i>In vivo</i> measurements of injection pressure/volume versus time for three representative cases of vertebroplasty ..	24
Analysis of injection pressures during vertebroplasty	25
Experimental determination of the different pressure components during a cement injection	26
Analysis of risk of cement extravasation out of the vertebral body	27

Development of a new injection cannula	28
Conclusions	29
Acknowledgments	30
Glossary	30
Biomechanics of vertebral cement augmentation: risk of adjacent fractures following vertebroplasty (G. Baroud and S. Wolf)	31
Summary	31
Introduction	31
Methods and results	31
Discussion	36
Chapter 5. Indications, contraindications and imaging in balloon kyphoplasty (S. Becker)	39
Indications and contraindications	39
Imaging	39
Sequential therapy after osteoporotic vertebral fracture – a treatment scheme	41
Chapter 6. Special anatomy and classification of fractures	45
The venous drainage system of the vertebral body and spine and its consequences for balloon kyphoplasty (S. Becker)	45
The vertebral venous system	45
The basivertebral system	45
The internal vertebral venous system	46
Classification of osteoporotic vertebral fractures (B. Boszczyk)	47
Chapter 7. The technique of balloon kyphoplasty (S. Becker)	49
The set of instruments	49
The balloon catheter (inflatable) bone tamp and the pressure syringe	50
Anatomical landmarks and image intensifier settings	51
The pedicles	51
The spinous process	51
The endplates and the posterior wall	51
Special procedures in the case of scoliosis	52
Starting and end points in lumbar transpedicular operations	52
Starting point	52
End points	53
Starting and end points in thoracic extrapedicular operations	55
Preparation and positioning of the patient	56
Performing balloon kyphoplasty	56
The impact of positioning versus balloon kyphoplasty on restoration of vertebral height	56
Anesthesiological preparation	56
Lumbar transpedicular access	57
Extrapedicular access	64
Malpositioning of the working cannula	65
High thoracic approach (B. Boszczyk)	66
Instructions for preparation of the cement (S. Becker)	69
Radiation exposure (B. Boszczyk and M. Bierschneider)	70
Chapter 8. Results in kyphoplasty, risks and complications (U. Berlemann, P. Hulme, and O. Schwarzenbach)	73
Materials and methods	73
Results	74
Pain relief	74
Correction of kyphosis	74
Complications	74
New fractures	74
Discussion	76
Summary: the risks of kyphoplasty (M. Bierschneider, B. Boszczyk, and H. Jaksche)	79
1. Preoperative risks	79

Contents	IX
2. Intraoperative risks	79
3. Postoperative risks	83
Conclusion	83
 Chapter 9. Special indications and techniques of balloon kyphoplasty (S. Becker and M. Ogon)	85
Balloon kyphoplasty for the treatment of malignant bone tumors	85
Plasmocytoma (multiple myeloma)	85
Osteolytic metastases	85
Special techniques in cases of plasmocytoma (multiple myeloma) and osteolytic metastases	88
Microsurgical interlaminar balloon kyphoplasty (B. Boszczyk and M. Bierschneider)	90
Special balloon kyphoplasty techniques in cases of screw loosening and in spinal defects (S. Becker and M. Ogon)	93
Transpedicular balloon kyphoplasty after screw removal	93
Augmentation techniques	93
The egg-shell technique	93
Support technique	93
The treatment of vertebral osteonecrosis and vertebra plana with balloon kyphoplasty (S. Becker)	98
 Chapter 10. Indications and experience with balloon kyphoplasty in trauma	105
Balloon-assisted endplate reduction combined with vertebroplasty for the treatment of traumatic vertebral body fractures (J.-J. Verlaan, W. J. A. Dhert, and F. Cumhur Oner)	105
Current approaches and techniques for the treatment of traumatic vertebral fractures	105
Experimental and clinical studies for the development of transpedicular augmentation techniques of the anterior spinal column in traumatic fractures	106
First steps in developing a direct reduction technique for burst fractures	106
The choice of cement as a bone-void filler. An animal model for vertebroplasty	106
A clinical trial to assess the feasibility and safety of BAER and VTP for traumatic thoracolumbar fractures	108
Detailed analysis of intraoperative changes in bone displacement and endplate reduction during balloon vertebroplasty visualized with 3D rotational X-ray imaging	110
A combination of external fixation and balloon vertebroplasty for traumatic fractures	112
Conclusions	114
Percutaneous kyphoplasty in traumatic fractures (G. Maestretti, S. Krajinovic, and P. Otten)	116
Terminology	116
Introduction	116
History of kyphoplasty	117
Advantages of percutaneous kyphoplasty	117
Disadvantages of percutaneous kyphoplasty	117
Indications for percutaneous kyphoplasty	117
Contraindications	118
Surgical technique	118
Kyphoplasty technique in traumatic fractures	118
Calcium phosphate cement	120
Postoperative care	123
Results of our study	124
Complications	124
Critical evaluation	125
 Chapter 11. Alternative methods to kyphoplasty: vertebroplasty – lordoplasty (P. F. Heini and R. Orler)	129
Patient evaluation	129
Radiological evaluation	129
Indications and contraindications of vertebroplasty	129
Contraindications	130
Surgical techniques and augmentation strategies	130
Materials needed for performance of the operation	130
Anesthesiological aspects	131
Screening/imaging	131
Placing the cannulae	132
Preparation and injection of the cement	132
Strategies of the augmentation	135

Correction of kyphosis: indication, technique, results	135
Combined surgical procedures	139
Limitations and complications	139
Chapter 12. Injectable cements for vertebroplasty and kyphoplasty (M. Bohner)	143
Various cements	143
Cement properties for vertebroplasty	145
Conclusions	147
Chapter 13. Physiotherapeutic treatment after balloon kyphoplasty – aspects and concepts (Silke Becker)	149
Relation between kyphosis, the diaphragm and breathing	150
Relation between the abdominal wall and pelvic floor muscles, and the deep muscular stabilization system	151
How kyphosis and imbalance of the muscles are related	151
Training and bone density	152
Sensomotoric training	152
Postoperative concepts with sensomotoric training	153
aerostep®	153
Mini-trampoline	155
Outdoor training	156
Kyphosis and incontinence	158
Appendix	161
International coding of diseases according to ICD 10-GM 2004	161
