Introduction	9

Unit I Human Biology 13

Chapter 1 Movement

1.1 Bones, joints and muscles are needed for movement	14
1.2 The skeleton carries and protects your body	15
1.3 All our bones are built in the same way	17
1.4 Joints fit bones together	18
1.5 Muscles move your bones and your blood	20
1.6 Skeletal muscles work in pairs	21
Improve your skills: Reading, understanding and memorizing a text	22
Activities	23
Extension:	
1.7 Defects in posture can be prevented	25
1.8 Treatment of common injuries to bones and muscles	27
Revision	29

Chapter 2 Respiration

2.1 The organs used for breathing make up your respiratory system	30
2.2 The lungs cannot work without muscles	31
2.3 Gas exchange takes place in the alveoli and in the cells	32
2.4 Smoking is bad for your health	33
Improve your skills: Working with models	36
Activities	38
Extension:	
2.5 Breathing, swallowing and speaking	39
2.6 Diseases of the respiratory organs	40
Further activities	41
Revision	43

Chapter 3 Blood and Blood Circulation

3.1 Blood forms a liquid organ	44
3.2 Blood is an efficient transport system	46
3.3 Your heart pumps your blood around the body	47
3.4 Blood is transported in arteries, veins and capillaries	49
3.5 Blood flows through your body in two separate circulations	50
3.6 Blocked arteries can cause heart disease and stroke	51
– First Aid for bleeding	52
Improve your skills: Working with tables and line graphs	53
Activity	54
Extension:	
3.7 Blood groups and blood transfusions	55
3.8 The lymphatic system	56
Revision	57

Chapter 4 Food and Nutrition

4.1	Food serves three major functions	58
4.2	A healthy diet includes seven essential groups of substances	59
4.3	Eating right is important for a healthy lifestyle	61
4.4	How much energy do you need?	64
4.5	Eating habits can go wrong	66
4.6	Tips for healthy snacks	68
	Improve your skills: Making a bar chart	69
	Activities	70
	Revision	73

Chapter 5 Digestion and Absorption

5.1	Digestion starts in the mouth	75
5.2	Teeth need proper care	76
5.3	The gullet transports food from the mouth to the stomach	78
5.4	Protein digestion starts in the stomach	79
5.5	Food is further digested and absorbed in the small intestine	80
5.6	The large intestine absorbs water and stores undigested food	81
	Improve your skills: Planning and carrying out a scientific experiment	82
	Activities	85
	Extension:	
5.7	Enzymes are important for chemical digestion	86
5.8	Your liver is a chemical factory	87
5.9	The human body is a complex biological system	88
	Revision	89

Chapter 6 Reproduction and Development

6.1	Puberty is a time of physical, mental and emotional change	90
6.2	'Love don't come easy'	93
6.3	The male reproductive system produces hormones and sperm	95
6.4	The female reproductive system is prepared for pregnancy	97
6.5	Puberty demands a high level of personal hygiene	99
6.6	If an egg is fertilized, a pregnancy can start	101
6.7	Pregnancy and birth are periods of rapid change	102
6.8	Contraceptives can prevent pregnancy	105
6.9	Sexual intercourse can transmit diseases	107
6.10	Sexual abuse takes many forms	108
	Improve your skills: Getting the most out of a film sequence	110
	Activities	111
	Revision	112

Chapter 7 The Sense Organs

7.1	All our sense organs work in a similar way	114
7.2	The eyes are complex and sensitive optical instruments	116
7.3	Your eyes can adjust to changing conditions	119
7.4	You see with your eyes and your brain	122
7.5	Take care of your eyes	124
7.6	Disorders of the eyes can be treated	125
7.7	Hearing is only one function of your ears	127
7.8	Your sense of balance lies in the inner ear	130
7.9	Noise can make you ill	131
	Improve your skills: Making an educational poster	133

Activities	134
Extension:	
7.10 Animals see and hear differently	138
Revision	142
Chapter 8 Drugs, Addiction and Prevention	
8.1 Drugs come in many forms	144
8.2 The short-term effects of alcohol depend on how much alcohol is in the blood	145
8.3 The long-term effects of heavy drinking can be devastating	148
8.4 People can become addicted to substances or behaviour	150
8.5 No one plans to become addicted	151
8.6 Different substances have different effects	153
8.7 What is your antidrug?	154
Improve your skills: Asking an expert	156
Activities	157
Revision	158

Unit II Flowering Plants 159

Chapter 1 The Organs of a Flowering Plant and Their Functions	
1.1 Roots provide the plant with water and minerals	161
1.2 Stems provide transport and support	162
1.3 Leaves have many different shapes	164
1.4 Transpiration takes place in the leaves	165
1.5 Photosynthesis is a vital process	167
1.6 Flowers are the organs of reproduction	168
1.7 Sexual reproduction begins with pollination	170
1.8 Fertilization, seed and fruit	172
1.9 Seeds and fruits are dispersed in various ways	174
1.10 Seeds can germinate and develop into new plants	176
1.11 Some plant organs allow for asexual reproduction	178
Improve your skills: Carrying out a long-term observation	181
Activities	182
Extension:	
1.12 Plants produce more than just sugar and starch	186
Revision	188
Chapter 2 Plants of Economic Importance	
2.1 Grasses have flowers, too	190
2.2 Grasses provide food for humans and animals	191
2.3 Wheat is of great economic importance	192
2.4 The cabbage flower has the form of a cross	194
2.5 Cabbages are the result of artificial selection	196
2.6 Cultivated cabbage plants have many uses	198
2.7 A survey of common cereals	200
Improve your skills: Collecting and sorting plant species	203
Activities	205
Extension:	
2.8 Producers and consumers must respire	208
Further activities	209
Revision	210

Unit III	Cells, Tissues and Organs	211
	Chapter 1 Investigating Cells	
	1.1 Cells cannot be studied with the naked eye	213
	1.2 The invention of the microscope has led to important discoveries in cytology ..	215
	1.3 The compound microscope is an essential tool	218
	Improve your skills: Preparing a wet mount	220
	Activities	222
	Revision	223
	Chapter 2 Cells: Their Structure, Function and Development	
	2.1 All plant cells have characteristic organelles	224
	2.2 Animal cells come in many different shapes	226
	2.3 Mitochondria are the site of cellular respiration	227
	2.4 Body cells divide by mitosis	229
	2.5 Cells work together to form tissues and organs	231
	Improve your skills: Drawing a microscopic object	235
	Activities	236
	Extension:	
	2.6 A leaf consists of different tissues	240
	Further activities	241
	Revision	243
	Appendix	
	English–German vocabulary	244
	German–English vocabulary	261
	Abbreviations and symbols	267
	Acknowledgements	268
