0	Introduction: What is This Book About	1
0.1	New Life of an Old Theory	1
0.2	Plan of the Book	2
0.3	What You Will Not Find in this Book	4
1	Constellations, Coverings, and Maps	7
1.1	Constellations	7
1.2	Ramified Coverings of the Sphere	13
1.2.1	First Definitions	13
1.2.2	Coverings and Fundamental Groups	15
1.2.3	Ramified Coverings of the Sphere and Constellations ...	18
1.2.4	Surfaces	22
1.3	Maps	26
1.3.1	Graphs Versus Maps	26
1.3.2	Maps: Topological Definition	28
1.3.3	Maps: Permutational Model	33
1.4	Cartographic Groups	39
1.5	Hypermaps	43
1.5.1	Hypermaps and Bipartite Maps	43
1.5.2	Trees	45
1.5.3	Appendix: Finite Linear Groups	49
1.5.4	Canonical Triangulation	50
1.6	More Than Three Permutations	55
1.6.1	Preimages of a Star or of a Polygon	56
1.6.2	Cacti	57
1.6.3	Preimages of a Jordan Curve	61
1.7	Further Discussion	63
1.7.1	Coverings of Surfaces of Higher Genera	63
1.7.2	Ritt's Theorem	65
1.7.3	Symmetric and Regular Constellations	68
1.8	Review of Riemann Surfaces	70

2	Dessins d’Enfants	79
2.1	Introduction: The Belyi Theorem	79
2.2	Plane Trees and Shabat Polynomials	80
2.2.1	General Theory Applied to Trees	80
2.2.2	Simple Examples	88
2.2.3	Further Discussion	94
2.2.4	More Advanced Examples	101
2.3	Belyi Functions and Belyi Pairs	109
2.4	Galois Action and Its Combinatorial Invariants	115
2.4.1	Preliminaries	115
2.4.2	Galois Invariants	118
2.4.3	Two Theorems on Trees	123
2.5	Several Facets of Belyi Functions	126
2.5.1	A Bound of Davenport–Stothers–Zannier	126
2.5.2	Jacobi Polynomials	131
2.5.3	Fermat Curve	135
2.5.4	The <i>abc</i> Conjecture	137
2.5.5	Julia Sets	139
2.5.6	Pell Equation for Polynomials	142
2.6	Proof of the Belyi Theorem	146
2.6.1	The “Only If” Part of the Belyi Theorem	146
2.6.2	Comments to the Proof of the “Only If” Part	147
2.6.3	The “If”, or the “Obvious” Part of the Belyi Theorem	150
3	Introduction to the Matrix Integrals Method	155
3.1	Model Problem: One-Face Maps	155
3.2	Gaussian Integrals	160
3.2.1	The Gaussian Measure on the Line	160
3.2.2	Gaussian Measures in \mathbb{R}^k	162
3.2.3	Integrals of Polynomials and the Wick Formula	163
3.2.4	A Gaussian Measure on the Space of Hermitian Matrices	164
3.2.5	Matrix Integrals and Polygon Gluings	167
3.2.6	Computing Gaussian Integrals. Unitary Invariance	171
3.2.7	Computation of the Integral for One Face Gluings	176
3.3	Matrix Integrals for Multi-Faced Maps	179
3.3.1	Feynman Diagrams	179
3.3.2	The Matrix Integral for an Arbitrary Gluing	180
3.3.3	Getting Rid of Disconnected Graphs	183
3.4	Enumeration of Colored Graphs	185
3.4.1	Two-Matrix Integrals and the Ising Model	185
3.4.2	The Gauss Problem	188
3.4.3	Meanders	190
3.4.4	On Enumeration of Meanders	191
3.5	Computation of Matrix Integrals	192

3.5.1	Example: Computing the Volume of the Unitary Group	192
3.5.2	Generalized Hermite Polynomials	195
3.5.3	Planar Approximations	197
3.6	Korteweg–de Vries (KdV) Hierarchy for the Universal One-Matrix Model	199
3.6.1	Singular Behavior of Generating Functions	200
3.6.2	The Operator of Multiplication by λ in the Double Scaling Limit	202
3.6.3	The One-Matrix Model and the KdV Hierarchy	204
3.6.4	Constructing Solutions to the KdV Hierarchy from the Sato Grassmanian	206
3.7	Physical Interpretation	210
3.7.1	Mathematical Relations Between Physical Models	211
3.7.2	Feynman Path Integrals and String Theory	211
3.7.3	Quantum Field Theory Models	213
3.7.4	Other Models	214
3.8	Appendix	215
3.8.1	Generating Functions	215
3.8.2	Connected and Disconnected Objects	217
3.8.3	Logarithm of a Power Series and Wick’s Formula	219
4	Geometry of Moduli Spaces of Complex Curves	223
4.1	Generalities on Nodal Curves and Orbifolds	223
4.1.1	Differentials and Nodal Curves	223
4.1.2	Quadratic Differentials	226
4.1.3	Orbifolds	227
4.2	Moduli Spaces of Complex Structures	232
4.3	The Deligne–Mumford Compactification	234
4.4	Combinatorial Models of the Moduli Spaces of Curves	237
4.5	Orbifold Euler Characteristic of the Moduli Spaces	243
4.6	Intersection Indices on Moduli Spaces and the String and Dilaton Equations	249
4.7	KdV Hierarchy and Witten’s Conjecture	256
4.8	The Kontsevich Model	257
4.9	A Sketch of Kontsevich’s Proof of Witten’s Conjecture	263
4.9.1	The Generating Function for the Kontsevich Model	263
4.9.2	The Kontsevich Model and Intersection Theory	264
4.9.3	The Kontsevich Model and the KdV Equation	266
5	Meromorphic Functions and Embedded Graphs	269
5.1	The Lyashko–Looijenga Mapping and Rigid Classification of Generic Polynomials	270
5.1.1	The Lyashko–Looijenga Mapping	270
5.1.2	Construction of the LL Mapping on the Space of Generic Polynomials	271

5.1.3	Proof of the Lyashko–Looijenga Theorem	273
5.2	Rigid Classification of Nongeneric Polynomials and the Geometry of the Discriminant	277
5.2.1	The Discriminant in the Space of Polynomials and Its Stratification	277
5.2.2	Statement of the Enumeration Theorem	279
5.2.3	Primitive Strata	280
5.2.4	Proof of the Enumeration Theorem	282
5.3	Rigid Classification of Generic Meromorphic Functions and Geometry of Moduli Spaces of Curves	288
5.3.1	Statement of the Enumeration Theorem	288
5.3.2	Calculations: Genus 0 and Genus 1	289
5.3.3	Cones and Their Segre Classes	292
5.3.4	Cones of Principal Parts	294
5.3.5	Hurwitz Spaces	297
5.3.6	Completed Hurwitz Spaces and Stable Mappings	299
5.3.7	Extending the LL Mapping to Completed Hurwitz Spaces	300
5.3.8	Computing the Top Segre Class; End of the Proof	302
5.4	The Braid Group Action	304
5.4.1	Braid Groups	304
5.4.2	Braid Group Action on Cacti: Generalities	309
5.4.3	Experimental Study	312
5.4.4	Primitive and Imprimitive Monodromy Groups	318
5.4.5	Perspectives	325
5.5	Megamaps	327
5.5.1	Hurwitz Spaces of Coverings with Four Ramification Points	328
5.5.2	Representation of \overline{H} as a Dessin d’Enfant	329
5.5.3	Examples	331
6	Algebraic Structures Associated with Embedded Graphs . .	337
6.1	The Bialgebra of Chord Diagrams	337
6.1.1	Chord Diagrams and Arc Diagrams	337
6.1.2	The 4-Term Relation	339
6.1.3	Multiplying Chord Diagrams	342
6.1.4	A Bialgebra Structure	343
6.1.5	Structure Theorem for the Bialgebra \mathcal{M}	346
6.1.6	Primitive Elements of the Bialgebra of Chord Diagrams	347
6.2	Knot Invariants and Origins of Chord Diagrams	350
6.2.1	Knot Invariants and their Extension to Singular Knots	350
6.2.2	Invariants of Finite Order	353
6.2.3	Deducing 1-Term and 4-Term Relations for Invariants	355

6.2.4	Chord Diagrams of Singular Links	357
6.3	Weight Systems	359
6.3.1	A Bialgebra Structure on the Module \mathcal{V} of Vassiliev Knot Invariants	359
6.3.2	Renormalization	360
6.3.3	Weight Systems	362
6.3.4	Vassiliev Knot Invariants and Other Knot Invariants	364
6.4	Constructing Weight Systems via Intersection Graphs	367
6.4.1	The Intersection Graph of a Chord Diagram	367
6.4.2	Tutte Functions for Graphs	368
6.4.3	The 4-Bialgebra of Graphs	369
6.4.4	The Bialgebra of Weighted Graphs	379
6.4.5	Constructing Vassiliev Invariants from 4-Invariants	383
6.5	Constructing Weight Systems via Lie Algebras	384
6.5.1	Free Associative Algebras	385
6.5.2	Universal Enveloping Algebras of Lie Algebras	387
6.5.3	Examples	390
6.6	Some Other Algebras of Embedded Graphs	393
6.6.1	Circle Diagrams and Open Diagrams	393
6.6.2	The Algebra of 3-Graphs	395
6.6.3	The Temperley–Lieb Algebra	395
A	Applications of the Representation Theory of Finite Groups (by Don Zagier)	399
A.1	Representation Theory of Finite Groups	399
A.1.1	Irreducible Representations and Characters	399
A.1.2	Examples	403
A.1.3	Frobenius’s Formula	406
A.2	Applications	408
A.2.1	Representations of S_n and Canonical Polynomials Associated to Partitions	409
A.2.2	Examples	415
A.2.3	First Application: Enumeration of Polygon Gluings	416
A.2.4	Second Application: the Goulden–Jackson Formula	418
A.2.5	Third Application: “Mirror Symmetry” in Dimension One	423
	References	429
	Index	445
