Contents

1. Introduction 1
1.1 Structure and Scope of This Work 4

2. What Is an Interface? 7

3. Equilibrium Thermodynamics of Multiphase Systems: Thermodynamic Potentials and Phase Diagrams 19
3.1 Calculating Phase Diagrams from Energy Functionals 21
3.2 Abstracted Phase Diagrams 23
3.2.1 Constructing the Gibbs Free Energies 26
3.2.2 Non-conserved Versus Conserved Variable Approach . . 28

4. Thermodynamic Concepts of Phase-Field Modeling 31
4.1 Derivation of Transport Equations 32
4.1.1 Considering Conserved Quantities Only 32
4.1.2 Extension to Non-conserved Quantities 35
4.2 Introducing the Phase-Field Variable Φ 38
4.3 Thermodynamic Consistency 46
4.3.1 The Gradient Flow Method 47
4.3.2 Entropy Production in Terms of Transport Variables . . 49
4.4 Appendix 53

5. Asymptotic Analysis 59
5.1 A Formal Mathematical Approach Towards Matching 59
5.1.1 Illustration of Extended Domains 63
5.1.2 Matching in the Context of Diffuse Interface Modeling 67
5.2 Asymptotic Matching for Thin Film Epitaxial Growth 68
5.2.1 Motivation 69
5.2.2 Sharp Interface Formulation 70
5.2.3 The Diffuse Interface Model Equations and Their Asymptotic Analysis 72
5.3 A Generalized Approach Towards the Asymptotic Analysis of Diffuse Interface Models 78

5.3.1 Role of the Governing Thermodynamic Potential 78
5.3.2 The Expansion Procedure in Detail 81
5.4 Discussion 92
5.5 Appendix 93

6. Application of Diffuse Interface Modeling to Hydrodynamically Driven Growth 97
6.1 Diffuse Interface Modeling for Hydrodynamically Influenced Growth 99
6.2 The Selection Problem of Dendritic Growth Revisited 104
6.3 Comparison to Experimental Data 119
6.4 Summary 127
6.5 Appendix 129

7. Application to Epitaxial Growth Involving Elasticity 131
7.1 Elastic Driving Forces within the Diffuse Interface Approach . 132
7.2 Comparing Simulations and Experiments 134
7.3 Discussion 140

8. Conclusions and Perspectives 141

Appendix 145

A. Numerical Issues of Diffuse Interface Modeling 145
A.1 Relationship Between Physical Variables and Numerical Parameters 146
A.2 Computational Universality of Phase Field Models 151
A.3 Selected State-of-the-Art Numerical Approaches 154
A.3.1 2D Adaptive Mesh Refinement Computation 155
A.3.2 3D Simulations Including Fluid Flow 161
