

Contents

Part I. Basis

1. The Diode
2. The Bipolar Transistor
3. The Field Effect Transistor
4. Amplifiers
5. Operational Amplifiers
6. Latching Circuits
7. Logic Families
8. Combinatorial Circuits
9. Sequential Logic Systems
10. Semiconductor Memories

Part II. Applications

11. Operational Amplifier Applications
12. Controlled Sources and Impedance Converters
13. Active Filters
14. Signal Generators
15. Power Amplifiers
16. Power Supplies
17. Analog Switches and Sample-and-Hold Circuits
18. Digital-Analog and Analog-Digital Converters
19. Digital Filters
20. Measurement Circuits
21. Sensors and Measurement Systems
22. Electronic Controllers
23. Optoelectronic Components

Part III. Circuits for Telecommunication Engineering

24. Basics
25. Transmitters and Receivers
26. Passive Components
27. High-Frequency Amplifiers
28. Mixer

29. Appendix
