

Contents

1. Symmetry	1
1.1 Model Surfaces	1
1.1.1 Surface Versus Bulk	1
1.1.2 The Surface as a Physical Object	1
1.2 Two-Dimensional Crystals	3
1.2.1 Lattice Planes of Bulk Crystals	3
1.2.2 Oriented Slabs	8
1.2.3 Ideal Surfaces. Planar Point Groups	11
1.2.4 Real Surfaces: Reconstruction and Relaxation	16
1.2.5 Superlattices at Surfaces	19
1.2.6 Wood Notation	20
1.2.7 Symmetry Classification	25
1.3 Reciprocal Space	29
1.3.1 Direct and Reciprocal Lattices	29
1.3.2 Brillouin Zones	35
1.3.3 Projection of 3D Onto 2D Brillouin Zones	37
1.3.4 Symmetry of Points and Lines in Reciprocal Space ...	41
2. Thermodynamics	45
2.1 Kinetic Processes and Surfaces in Equilibrium	45
2.2 Thermodynamic Relations for Surfaces	46
2.2.1 Thermodynamic Potentials	46
2.2.2 Surface Modification of Thermodynamic Potentials ...	48
2.2.3 Surface Tension and Surface Stress	49
2.3 Equilibrium Shape of Small Crystals	51
2.3.1 Anisotropy of Surface Energy	51
2.3.2 Absolute Values for Surface Energies	55
2.3.3 Wulff Construction	57
2.4 Surface Energy and Morphology	59
2.4.1 Facetting and Roughening	59
2.4.2 3D Versus 2D Growth	60
2.4.3 Formation of Quantum Dots	63
2.5 Stoichiometry Dependence	66
2.5.1 Thermodynamic Approach	66

2.5.2	Approximations for Surface Energies	67
2.5.3	Chemical Potentials	69
2.5.4	Phase Diagrams	74
2.5.5	Stability of Adsorbates	78
3.	Bonding and Energetics	81
3.1	Orbitals and Bonding	81
3.1.1	One-Electron Picture	81
3.1.2	Tight-Binding Approach	82
3.1.3	Atomic Orbitals and Their Interaction	85
3.1.4	Bonding Hybrids	89
3.1.5	Bonds and Bands	94
3.2	Dangling Bonds	97
3.2.1	Formation of Dangling Hybrids	97
3.2.2	Influence on Electronic States	98
3.3	Total Energy and Atomic Forces	102
3.3.1	Basic Approximations	102
3.3.2	Potential Energy Surface and Forces	103
3.3.3	Surface Diffusion	105
3.4	Quantitative Description of Structure and Stability	109
3.4.1	Density Functional Theory	109
3.4.2	Band-Structure and Interaction Contributions	112
3.4.3	Modeling of Surfaces	114
3.5	Bond Breaking: Accompanying Charge Transfers and Atomic Displacements	122
3.5.1	Characteristic Changes in Total Energy	122
3.5.2	Energy Gain Due to Structural and Configurational Changes	125
3.5.3	Energy Gain and Electron Transfer	129
4.	Reconstruction Elements	133
4.1	Reconstruction and Bonding	133
4.1.1	Metallic Bonds	133
4.1.2	Strong Ionic Bonds	135
4.1.3	Mixed Covalent and Ionic Bonds	136
4.1.4	Principles of Semiconductor Surface Reconstruction	138
4.1.5	Electron Counting Rules	141
4.2	Chains	143
4.2.1	Zig-Zag Chains of Cations and Anions	143
4.2.2	π -bonded Chains	150
4.2.3	Seiwatz Chains	156
4.3	Dimers	158
4.3.1	Symmetric Dimers	158
4.3.2	Asymmetric Dimers	163
4.3.3	Heterodimers	166

4.3.4	Bridging Groups	168
4.4	Adatoms and Adclusters	170
4.4.1	Isolated Adatoms	170
4.4.2	Adatoms Accompanied by Rest Atoms	172
4.4.3	Adatoms Combined with Other Reconstruction Elements	176
4.4.4	Trimers	180
4.4.5	Tetramers	183
5.	Elementary Excitations I:	
	Single Electronic Quasiparticles	187
5.1	Electrons and Holes	187
5.1.1	Excitation and Quasiparticle Character	187
5.1.2	Scanning Tunneling Spectroscopy	188
5.1.3	Photoemission Spectroscopy and Inverse Photoemission	194
5.1.4	Satellites	199
5.2	Many-Body Effects	201
5.2.1	Quasiparticle Equation	201
5.2.2	Quasiparticle Shifts and Spectral Weights	203
5.2.3	Screening Near Surfaces	207
5.3	Quasiparticle Surface States	211
5.3.1	Surface Barrier	211
5.3.2	Characteristic Energies	214
5.3.3	State Localization	217
5.3.4	Quasiparticle Bands and Gaps	221
5.4	Strong Electron Correlation	225
5.4.1	Image States	225
5.4.2	Mott–Hubbard Bands	231
6.	Elementary Excitations II:	
	Pair and Collective Excitations	237
6.1	Probing Surfaces by Excitations	237
6.1.1	Optical Spectroscopies	237
6.1.2	Light Propagation in Surfaces	240
6.1.3	Electron Energy Losses	243
6.1.4	Raman Scattering	250
6.2	Electron–Hole Pairs: Excitons	254
6.2.1	Polarization Function	254
6.2.2	Two-Particle Hamiltonian	255
6.2.3	Excitons	258
6.2.4	Surface Exciton Bound States	262
6.2.5	Surface-Modified Bulk Excitons	265
6.3	Plasmons	269
6.3.1	Intraband Excitations	269

XII Contents

6.3.2	Plasma Oscillations	270
6.3.3	Surface Modifications	270
6.4	Phonons	273
6.4.1	Harmonic Lattice Dynamics	273
6.4.2	Surface and Bulk Modes	276
6.4.3	Rayleigh Waves	278
6.4.4	Fuchs–Kliwer Phonons	281
6.4.5	Influence of Relaxation and Reconstruction	285
6.5	Elementary Excitations for Reduced Dimension	290
7.	Defects	293
7.1	Realistic and Ideal Surfaces	293
7.2	Point Defects	294
7.2.1	Vacancies	294
7.2.2	Impurities	300
7.2.3	Antisites	302
7.3	Line Defects: Steps	303
7.3.1	Geometry and Notation	303
7.3.2	Steps on Si(100) Surfaces	306
7.3.3	Steps on Si(111) Surfaces	310
7.4	Planar Defects: Stacking Faults	312
7.4.1	Defect, Reconstruction Element or Bulk Property?	312
7.4.2	Si on Si(111) $\sqrt{3}\times\sqrt{3}$ -B	313
	References	317
