Contents

Preface ..... **vii**

Part I: Introducing the Web Application Design Methodology **1**

1 Introduction **3**
1.1 Who Should Read the Book? 4
1.2 Structure of the Book 4

2 Framework Architecture **7**
2.1 Motivation 7
2.2 Framework Architecture for Web Applications 9
2.3 From Client/Server to WWW 16
2.4 Web Platform Architecture (WPA) 28
2.5 Web Application Architecture (WAA) 31
2.6 Requirements for a Framework Architecture 36
2.7 Guide to the Rest of the Book 37

3 Developing WAA and WPA **39**
3.1 Introduction 39
3.2 Preparation Phase 41
3.3 Design Phase: WAA 47
3.4 Design Phase: WPA 49
3.5 Design Phase: Assign Capabilities 53
3.6 Design Phase: Iterate and Improve 54
3.7 Alternative Notations 56
3.8 Conclusions 61

4 Classification of Internet Standards and Technologies **63**
4.1 Classification 63
4.2 Developing WAA and WPA – Continued 72

Part II: Internet Standards and Technologies **77**

5 Basic Programming Concepts for Web Applications **77**
5.1 Overview 77
5.2 Client vs. Server Side Approaches 78
5.3 The Session Problem 78
5.4 Generating, Extending, and Enriching HTML 80
5.5 Client Side Approaches 83
5.6 Server Side Approaches 84
5.7 Database Connectivity 90
5.8 Cookbook of Recommendations 95

6 Component-Oriented Software Development 99
6.1 Code Reuse 99
6.2 Components 101
6.3 The Implementation of Components 102
6.4 Component Oriented Software in Practice – Middleware 104
6.5 The Classical Approach: RPC 105
6.6 Remote Method Invocation (RMI) 105
6.7 Object Brokers 106
6.8 CORBA 106
6.9 Sun's Enterprise Java Beans (J2EE) 109
6.10 The Microsoft .NET Framework 114
6.11 CORBA Component Model 116
6.12 When to Use What – the Dilemma 117
6.13 Conclusion 119

7 Web Services and Web Applications 121
7.1 Introduction and Motivation 121
7.2 WSDL – Web Services Description Language 125
7.3 SOAP – Simple Object Access Protocol 132
7.4 UDDI – Universal Description, Discovery and Integration 136
7.5 Advanced Concepts 142
7.6 Web Service Composition and Web Service Flow Languages 142
7.7 Assessment 147

8 Web Site Engineering and Web Content Management 149
8.1 History of Web Site Engineering – from Engineering in the Small to Engineering in the Large 149
8.2 Separation Aspects 150
8.3 Web Content Management Systems 160

Part III: Complementary Technologies for Web Application Development 173

9 Why Technologies and Standards Are Not Enough 171
9.1 Characteristics of Web Applications in Enterprise Scenarios 171
9.2 Issues Arising from these Characteristics 172
9.3 Solution Concepts 174
9.4 Implementing the Concepts: Repository Technology 176

10 Registries 177
10.1 Introduction 177
10.2 Characteristics of a Registry 180
10.3 Application Scenarios 186

11 Organizations and Organizational Structures 191
11.1 Web Applications and Organizational Structures 191
11.2 Storing Organizational Structures 193
11.3 Dealing with Identity Management 194

11.4 Dealing with Personalization ... 196
11.5 Solutions: Microsoft Passport and Liberty Alliance ... 198
11.6 Integration with Web Framework Architecture ... 200
11.7 Conclusion ... 202

12 Process Technology ... 203
12.1 Motivation and Classification ... 203
12.2 The Perspectives of Process and Workflow Models ... 204
12.3 Using Processes in the Web Application Framework ... 208

13 Repositories ... 211
13.1 Introduction ... 211
13.2 Scenarios ... 213
13.3 Metadata ... 215
13.4 Architecture of Repository Systems ... 217
13.5 Repository Systems as Foundation for Registries and Organization Modeling ... 220

14 Putting It All Together ... 221
14.1 The Scenario: the Order Entry System ... 221
14.2 The WAA ... 222
14.3 The WPA ... 224
14.4 The Role of the Registry and Processes ... 229
14.5 Conclusion ... 230

A Appendix A ... 231
A.1 Introduction to UML ... 231
A.2 UML Use Case Diagrams ... 231
A.3 UML Sequence Diagrams ... 232
A.4 UML Class Diagrams and UML Package Diagrams ... 233

Literature ... 237

Index ... 243
