<b>Preface</b>	.....	V
<b>Processing of SAR data with special emphasis in interferometry</b>	....	VII
<b>Summary</b>	.....	IX
<b>1</b>	<b>Introduction</b>	1
1.1	Applications of SAR sensors	1
1.2	Problem and analysis	6
1.3	Short overview in interferometry	7
1.4	Objective and methodology	9
<b>2</b>	<b>SAR basic</b>	17
2.1	Introduction	17
2.1.1	The radar equation	18
2.1.1.1	Radar equation for radar with real aperture (unfocussing systems)	18
2.1.1.2	Radar term for radars with synthetic aperture-focussing systems	20
2.1.1.3	Signal/noise distance	22
2.1.2	Transmitted and received signal	23
2.1.2.1	Description in bandpass domain and equivalent lowpass domain	23
2.1.2.2	Fourier transformation of the chirp	25
2.1.2.2.1	Temporally infinite chirp signal	26
2.1.2.2.2	Temporally limited chirp signal	28
2.1.2.3	Autocorrelation function of a chirp signal	38
2.2	SAR system	44
2.2.1	Recording geometry	44
2.2.1.1	Introduction	44
2.2.1.2	Geometry of sensor motion	45

2.2.1.2.1	Orbit . . . . .	45
2.2.1.2.2	The flight-trajectory angle $\alpha$ . . . . .	48
2.2.1.2.3	Satellite velocity and circulation time . . . . .	50
2.2.1.3	Definition of the side-looking geometry . . . . .	52
2.2.1.4	Local sensor geometry – sensoric movements . . . . .	55
2.2.1.4.1	Yaw/gier angle . . . . .	56
2.2.1.4.2	Pitch/nick angle . . . . .	58
2.2.1.4.3	Roll angle . . . . .	58
2.2.1.4.4	Summary of the positioning . . . . .	59
2.2.1.4.5	Rotation of the earth . . . . .	59
2.2.1.5	Layover and shadowing . . . . .	64
2.2.1.5.1	Basics . . . . .	64
2.2.1.5.2	Foreshortening, layover and shadowing . . . . .	65
2.2.1.5.3	Pixel passing . . . . .	68
2.2.1.5.4	Shadowing . . . . .	70
2.2.1.5.5	Slant-ground correction . . . . .	70
2.2.2	Doppler effect and frequency shift . . . . .	71
2.2.2.1	Vivid derivation of the doppler-frequency . . . . .	71
2.2.2.2	Precise derivation via the distance derivations . . . . .	74
2.2.2.2.1	First derivative . . . . .	77
2.2.2.2.2	Second derivation . . . . .	79
2.2.2.3	Alternative derivations . . . . .	81
2.2.3	The sweep rate . . . . .	85
2.2.3.1	Range-sweep rate $k_r$ . . . . .	85
2.2.3.2	Azimuth-sweep rate $k_{az}$ . . . . .	85
2.2.4	Additional parameters . . . . .	88
2.2.4.1	Azimuth bandwidth . . . . .	88
2.2.4.2	Maximum doppler-centroid rate . . . . .	89
2.2.4.3	Criteria for the pulse-repetition frequency . . . . .	90
2.3	Development of SAR-raw data . . . . .	93
<b>3</b>	<b>SAR-signal processing . . . . .</b>	<b>99</b>
3.1	General dynamic system description . . . . .	99
3.2	Range resolution . . . . .	102
3.2.1	Range resolution in range direction/range compression . . . . .	103
3.2.1.1	Range resolution without using chirp-signals . . . . .	103
3.2.1.2	Range-compression resolution using chirp signals . . . . .	105
3.2.2	Range resolution in azimuth direction . . . . .	107
3.2.2.1	Radar with real aperture . . . . .	108
3.2.2.2	Radar with synthetic aperture . . . . .	110
3.2.2.3	Signal-theoretical view . . . . .	114
3.3	Azimuth compression . . . . .	116
3.3.1	Range parabola . . . . .	116

3.3.2	Range migration . . . . .	116
3.3.3	Azimuth compression . . . . .	118
3.4	Point-target spectrum in the 2D-frequency domain . . . . .	120
3.4.1	Derivation of the 2-dimensional point-target response . .	120
3.4.1.1	Introduction . . . . .	120
3.4.1.2	Evaluation of the point-target spectrum . . . . .	122
3.4.1.2.1	Simplifying of the integral using the principle of the stationary phase . . . . .	122
3.4.1.2.2	Calculation of the phase derivatives . . . . .	126
3.4.1.3	Calculation of the distance derivatives . . . . .	127
3.4.1.3.1	First distance derivative . . . . .	127
3.4.1.3.2	Second distance derivative . . . . .	128
3.4.1.3.3	Third distance derivative . . . . .	128
3.4.1.4	Evaluation of the stationary point . . . . .	129
3.4.1.5	Distance derivatives at the stationary point . . . . .	130
3.4.1.5.1	First distance derivative at the stationary point . . . . .	130
3.4.1.5.2	Second distance derivative at the stationary point . . . . .	131
3.4.1.6	Evaluation of the phase terms at the stationary point . . .	131
3.4.1.6.1	Calculation of the first phase constant . . . . .	131
3.4.1.6.2	Calculation of the second-phase constant . . . . .	132
3.4.1.7	Solution of the simplified integral . . . . .	133
3.4.1.8	The point-target spectrum . . . . .	134
3.4.3	Point-target spectrum in the 2-dimensional frequency domain . . . . .	136
3.5	Point-target spectrum in the range-doppler domain . . . .	137
3.5.1	Introduction . . . . .	137
3.5.2	The phase approximation . . . . .	138
3.5.3	Calculation of the modified sweep rate . . . . .	141
3.5.4	Description of the modified point-target spectrum . . . . .	142
3.5.5	Evaluation of the point-target spectrum in the range- doppler domain . . . . .	143
3.5.5.1	Usage of method of stationary phase . . . . .	143
3.5.6	The point-target spectrum in the range-doppler domain .	146
3.6	Summary and interpretation of the results . . . . .	147
<b>4</b>	<b>Signal processing algorithms . . . . .</b>	<b>151</b>
4.1	Exact point-target compression . . . . .	151
4.1.1	Range compression . . . . .	151
4.1.2	Compensation of the amplitude . . . . .	152
4.1.3	Phase compensation: azimuth compression . . . . .	154
4.1.4	Band pass filtering . . . . .	154

---

4.2	The range-doppler processor . . . . .	155
4.2.1	Range compression . . . . .	156
4.2.2	Compensation of the amplitude . . . . .	156
4.2.3	Phase compensation: azimuth compression . . . . .	157
4.2.4	Secondary range compression . . . . .	159
4.3	The SIFT processor . . . . .	161
4.3.1	Spectrum of the whole scene and first steps towards compression . . . . .	161
4.3.1.1	Derivation of the whole scene spectrum . . . . .	161
4.3.1.2	First compression-transfer function . . . . .	165
4.3.2	Basic ideas for further processing . . . . .	165
4.3.3	Derivation of the “Inverse-Scaled Fourier Transformation” . . . . .	167
4.3.3.1	Traditional fourier back-transformation . . . . .	167
4.3.3.2	Scaled fourier transformation . . . . .	168
4.3.3.2.1	Mathematical formulation . . . . .	168
4.3.3.2.2	Systemtheoretical formulation . . . . .	169
4.3.4	The phase approximation . . . . .	170
4.3.4.1	Derivation of the approximation . . . . .	170
4.3.4.2	Approximation error . . . . .	171
4.3.5	Consideration of the backscattering spectrum in the band pass domain . . . . .	172
4.3.5.1	Consideration of the zero-suppression . . . . .	173
4.3.5.2	Transformation into the range-distance domain . . . . .	173
4.3.6	Representation of the complete processor . . . . .	175
4.4	Scaling algorithms . . . . .	178
4.4.1	Introduction . . . . .	178
4.4.2	Frequency scaling . . . . .	181
4.4.3	Time scaling and chirp scaling . . . . .	182
4.5	Connection between the different processors . . . . .	184
4.6	Description of the secondary range compression . . . . .	185
4.7	Quality of SAR processors . . . . .	187
<b>5</b>	<b>Interferometry</b> . . . . .	<b>197</b>
5.1	Introduction . . . . .	197
5.2	Theory of SAR interferometry . . . . .	197
5.3	From the raw data to the digital evaluation model . . . . .	201
5.4	Coregistration . . . . .	206
5.4.1	Problem and requirements for the image registration . . . . .	206
5.4.2	Rough registration . . . . .	209

5.4.3	Precise registration . . . . .	214
5.4.4	Results of the coregistration . . . . .	216
5.5	Geometrical conversions and correction . . . . .	217
5.5.1	Orthometric projection and foreshortening . . . . .	217
5.5.2	Layover effect . . . . .	221
5.5.3	Shadow area correction . . . . .	223
5.6	Height-passpoint generation . . . . .	227
5.6.1	Introduction . . . . .	227
5.6.2	Principle of finding pass points . . . . .	229
5.6.2.1	Rotation angle . . . . .	234
5.6.2.2	Distance of the SAR carriers . . . . .	235
5.6.2.3	Range distance of the pass points . . . . .	236
5.6.2.4	Squint angle . . . . .	236
5.6.3	Implementation . . . . .	237
<b>6</b>	<b>Summary and perspectives . . . . .</b>	<b>239</b>
<b>7</b>	<b>Essentials . . . . .</b>	<b>243</b>
7.1	Geometry and processing . . . . .	243
7.2	Interferometry . . . . .	252
7.3	Geocoding . . . . .	258
<b>Appendix</b>	<b>. . . . .</b>	<b>263</b>
A-3.4.1.9	Determination of the rectangular in the frequency domain . . . . .	263
A-3.4.1.9.1	Case discrimination . . . . .	265
A-3.4.1.9.2	Solution of the inequality . . . . .	267
A-3.4.1.10	Summary of the position of the rectangular function . . .	279
A-3.4.2	Point target spectrum in the two-dimensional frequency domain . . . . .	279
<b>Bibliography</b>	<b>. . . . .</b>	<b>281</b>
<b>List of symbols</b>	<b>. . . . .</b>	<b>289</b>
