Part I. Nonlinear Analysis Methods

1. Preliminary Results	3
1.1 Operators in Spaces Product	3
1.2 Maximum Semimonotone Operators	21
1.3 Multi-valued Mappings	29
2. Functionals and Forms	49
2.1 Extreme Problems for Superposition Functionals	49
2.2 T-Differentiable Functionals	55
3. Nonlinear Operator Equations, Inclusions, and Variational Inequalities	67
3.1 Solvability and Some Properties of Solutions of Nonlinear Operator Equations	67
3.2 Some Properties of the Solutions of Variational Inequalities	86
4. Differential-Operator Equations and Inclusions	97
4.1 Functional Spaces	97
4.2 Differential-Operator Equations and the Properties of Their Solutions	108
4.3 Differential-Operator Inclusions	130
4.4 Differential-Operator Equations and Variational Inequalities. Properties of the Solutions	136

Part II. Problems of Control by Distributed Parameter Objects

5. Extremal Problems for Nonlinear Operator Equations and Variational Inequalities	151
5.1 The Conditions of Solvability of Extremal Problem	152
5.2 Non-coercive Extremal Problems for Operator Equations	172

5.3	Weak Expansion of Extremal Problems for Operator Equations and Variational Inequalities	181
5.4	Regularization and Approximated Solutions	196
5.5	The Necessary Optimality Conditions in Form of Variational Inequalities	213
5.6	Finite-Dimensional Approximations	237
6.	Optimal Control for Differential-Operator Equations and Inclusions	251
6.1	The Conditions of Solvability of the Optimal Control Problem	253
6.2	Optimal Control for Differential-Operator Inclusions	280
6.3	Necessary Conditions of Control Optimality in the Form of Variational Inequalities	290
6.4	Regularized and Approximate Solutions of the Extremal Problem	299
6.5	Finite-Dimensional Approximations	324
6.6	Some Problems of Optimal Control in Modified Systems of Navier-Stocks Equations and Reaction-Diffusion Equations	334
7.	Some Problems of Synthesis in Distributed Parameter Systems	351
7.1	The Problem of Attracting Sets Synthesis in Distributed Parameter Systems	353
8.	Control of Heat Transfer and Diffusion Processes	363
8.1	Construction of a Mathematical Model of Nonlinear Heat Transfer Process of Two-Phase Media	363
8.2	Analysis of Stationary Modes	365
8.2.1	Study of the Solvability of Dirichlet Problem	365
8.2.2	Solvability of the Mixed Boundary Value Problem	375
8.3	Solvability of the Dynamic System	382
8.3.1	Study of the Solvability of the First Initial-Boundary Value Problem	383
8.3.2	Solvability of the Mixed Initial-Boundary Value Problem	388
8.4	Statement of the Main Optimization Problems	391
8.5	Solvability of the Control Problem of Nonlinear Heat Transfer Stationary Mode	395
8.5.1	Solvability of the Control Problem on the Solutions of the Dirichlet Boundary Value Problem	395
8.5.2	Solvability of the Control Problem on Solutions of the Mixed Boundary Value Problem	403

8.6	Accounting for the Restrictions by Means of Variational Inequalities	405
8.7	The Necessary Conditions of Optimal Control	414
8.8	Solvability of the Control Problem for Dynamic Mode of Nonlinear Heat Transfer	420
8.9	Accounting for the Phase Restrictions by Means of Penalty Approximations	423
8.10	The Necessary Optimality Conditions of Dynamic Modes Control	427
9.	Problems of Control of Physical Processes of Diffusion and Heat-Mass Transfer	431
9.1	Control of Physical Processes of Diffusion and Heat-Mass Transfer. System Approach	431
9.2	Unilateral (One-Directional) Physical Processes in Industry and Natural Environment and Their Mathematical Description	435
9.2.1	Examples of Unilateral Physical Processes	435
9.2.2	Classification of Unilateral Physical Processes	436
9.2.3	Mathematical Formalization of Unilateral Physical Processes in the Form of Variational Inequalities	438
9.3	Problems of Mathematical Description and Computational Realization of Single-Valued Physical Processes	445
9.4	Problems of Control of the Unilateral Physical Processes	448
10.	Mathematical Formalization and Computational Realization of Diffusion and Heat-Mass Transfer Processes	451
10.1	Mathematical Formalization of the Unilateral Processes of Diffusion and Heat-Mass Transfer in the Form of Variational Inequalities	451
10.2	Computational Realization of Variational Inequalities	455
10.2.1	Class of Continuously Differentiable Functionals ψ_1^i	456
10.2.2	Class of Finite Functionals ψ_2^i Not Possessing the Continuous Differentiability Property	463
10.2.3	Class of the Functionals ψ_3^i Taking the Value $+\infty$	472
10.3	Examples of Realization of the Typified Unilateral Problems Based on Physical Processes of Diffusion and Heat-Mass Transfer	486
10.3.1	The Example of Realization of the Unilateral Problem for the Case of the "Thick" Wall with the Unilateral Direct Conductivity	486

XIV Contents

10.3.2 The Example of the Unilateral Problem Realization for the Case of the Processes with a “Soft” Upper Obstacle	489
10.4 The Computer Realization of the Unilateral Processes Mathematical Models	491
10.4.1 The Finite Differences Method	492
10.4.2 Application of the Modified Net Methods for Solution of the Matrix Model	495
10.5 The Numerical Researching of the Realization Algorithms of the Unilateral Processes Models	499
