Introduction	1
Optimal Control Problems and Syntheses	2
The Model Problem	6
The Classification Program	7
Chapters of the Book	10
Bibliographical Note	13
1 Geometric Control	15
1.1 Control Systems	15
1.2 Optimal Control	19
1.2.1 Existence	20
1.2.2 Pontryagin Maximum Principle	21
1.2.3 Abnormal Extremals and Endpoint Singular Extremals	23
1.3 High Order Conditions	24
1.3.1 High Order Maximum Principle	24
1.3.2 Envelope Theory	26
1.4 Geometric Control Approach to Synthesis	27
Bibliographical Note	29
Exercises	30
2 Time Optimal Synthesis for 2–D Systems	33
2.1 Introduction	35
2.2 Basic Definitions	38
2.3 Special Curves	40
2.4 Bound on the Number of Arcs	48
2.4.1 Proof of Theorem 13	51
2.5 Existence of an Optimal Synthesis	56
2.6 Classification of Synthesis Singularities	58
2.6.1 Frame Curves	58
2.6.2 Frame Points	60
2.6.3 Other Special Curves	62

2.6.4	Examples of Frame Curves and Frame Points	62
2.7	On the Relation Between the Switching Strategy and the Functions ϕ and θ^γ	83
2.7.1	The θ^γ Function on Singularities of the Synthesis	85
2.8	Structural Stability and Classification of Optimal Feedbacks . .	86
2.8.1	Feedback Equivalence	88
2.8.2	An Algorithm for the Synthesis	89
2.8.3	Structural Stability	103
2.8.4	Graphs	104
2.8.5	Admissible Graphs	108
2.8.6	Classification	111
2.9	Systems on Two Dimensional Manifolds	113
2.9.1	Graphs, Cellular Embeddings and the Heffter Theorem	114
2.9.2	Admissible Graphs and Syntheses Classification	116
2.10	Applications	118
2.10.1	Applications to Second Order Differential Equations	118
2.10.2	Example: the Duffin Equation	120
2.10.3	Generalization to Bolza Problems	121
2.10.4	The Non-locally Controllable Case	122
	Bibliographical Note	123
	Exercises	124
3	Generic Properties of the Minimum Time Function	127
3.1	Basic Definitions and Statements of Results	129
3.2	Properties of the Minimum Time Front F_T	132
3.2.1	Definition of Strips	132
3.2.2	F_T in a Neighborhood of the Origin	134
3.2.3	F_T in a Neighborhood of $\gamma_{op}^+ \cup \gamma_{op}^-$	135
3.2.4	The MTF on Other Bases	141
3.2.5	The MTF on Open Strips	141
3.2.6	F_T on Overlap Curves	145
3.2.7	F_T on Borders	145
3.2.8	Proof of Theorem 27	149
3.3	Proof of Theorem 26	149
3.4	Topology of the Reachable Set	151
	Exercises	152
4	Extremal Synthesis	153
4.1	Basic Facts	156
4.1.1	Generic Conditions	156
4.1.2	Anti-Turnpikes	157
4.1.3	New Frame Curves	158
4.1.4	The Set of Extremals in a Neighborhood of $\gamma^+ \cup \gamma^-$	159
4.1.5	Number of pre-Images	162
4.1.6	Singularities Along $\gamma^+ \cup \gamma^-$	164

4.1.7	Singularities Along Singular Trajectories	164
4.2	Extremal Strips and the Algorithm	167
4.2.1	Extremal Strip Borders: the FCs of Kind γ_0 and W	170
4.3	Abnormal Extremals	171
4.3.1	Generic Properties of Abnormal Extremals	171
4.3.2	Singularities	177
4.4	Extremal Strips Evolution and Frame Points	181
4.4.1	Frame Curves and Frame Points Along C and \bar{C}	182
4.4.2	Frame Curves and Points Along γ_0	184
4.4.3	Frame Curves and Points Along W	187
4.5	Existence of an Extremal Synthesis	189
4.6	Classification of the Singularities in $\mathbb{R}^2 \times S^1$	195
5	Projection Singularities	197
5.1	Singularities of the Projection Π_2	201
5.1.1	Classification of Projection Singularities	201
5.1.2	Classification of Abnormal Extremals	202
5.2	Projection Singularities for Π_3	209
5.2.1	The Extremal Front	211
A	Some Technical Proofs of Chapter 2	219
A.1	Proof of Theorem 15, p. 60	219
A.2	Proof of Theorem 16, p. 60	221
A.3	Proof of Proposition 3, p. 92	229
A.4	Proof of Proposition 4, p. 94	234
A.5	Proof of Theorem 20, p. 113	236
B	Bidimensional Sources	245
B.1	Local Optimal Synthesis at the Source	246
B.2	The Locally Controllable Case and Semiconcavity of the Minimum Time Function	247
