1	Some historical notes on the statistical dynamics of turbulence	1
2	Dynamic equations for moments	9
2.1	Turbulence decomposition	10
2.2	Equations for the mean flow	12
2.3	Equations for the turbulent stresses	14
2.4	Equations for the higher-order moments and probability density distribution	16
2.5	Interpretation of the turbulent stresses using invariant theory .	17
2.6	The turbulent eddy viscosity	21
2.7	Realizability of the turbulence closures	26
2.8	Anisotropy invariant mapping of turbulence.....	27
3	Dynamics of the turbulent dissipation rate	33
3.1	Application of the two-point correlation technique for interpreting ϵ_{ij}	33
3.2	Dynamic equations for the two-point velocity correlation	36
3.3	Physical simplification of the dynamic equation for $-\nu(\Delta_\xi \overline{u_i u_j'})_0$	38
3.4	Validation of the derived equations using numerical databases .	39
3.4.1	Decomposition of the turbulent dissipation rate	40
3.4.2	Locally homogeneous turbulence	42
3.4.3	The structure of the approximate equation for $-\nu(\Delta_\xi \overline{u_s u_s'})_0$	46
3.5	Higher-order derivatives of the two-point correlations	51
3.5.1	Analytical background	51
3.5.2	Further developments	56
3.5.3	Validation using the numerical database	63
3.6	Second-order derivatives of the triple correlations	64
3.7	Second-order derivatives of the two-point correlation $\overline{u_i u_j'}$	66

4	Contents	
	3.7.1	Partition of the dissipation tensor 67
	3.7.2	Behaviour of ϵ_{ij} close to the wall 69
	3.7.3	Construction of the invariant functions 72
	3.7.4	Closure of the production terms 76
	3.8	Balance of the approximate equation for ϵ_h 80
4	Velocity-pressure gradient correlations	85
	4.1	Statistical interpretation of Π_{ij} using the two-point correlation technique..... 85
	4.2	Further application of the two-point correlation technique 87
	4.3	Parametrization of Π_{ij} using invariant theory 91
	4.4	The inhomogeneous contribution to the velocity-pressure gradient correlations 99
	4.5	Validation of the turbulence closure for Π_{ij} using the numerical databases 103
5	Turbulent transport	109
	5.1	Trace of the transport..... 110
	5.2	Partition of the transport..... 111
	5.3	The triple velocity correlations in locally homogeneous turbulence 113
A	Application of the two-point correlation technique for interpreting the ϵ equation	121
B	Approximate form of the two-point velocity correlation $\overline{u_i u_j}$ tensor	127
