Survey and Summary

A Nomenclature for Restriction Enzymes, DNA Methyltransferases, Homing Endonucleases and Their Genes . . . 1

R.J. ROBERTS, M. BELFORT, T. BESTOR, A.S. BHAGWAT, T.A. BICKLE,
J. BITINAITE, R.M. BLUMENTHAL, S.K. DEGTYAREV, D.T.F. DRYDEN,
K. DYBVIG, K. FIRMAN, E.S. GROMOVA, R.I. GUMPORT, S.E. HALFORD,
S. HATTMAN, J. HEITMAN, D.P. HORNBY, A. JANULAITIS, A. JELTSCH,
J. JOSEPHSEN, A. KISS, T.R. KLAENHAMMER, I. KOBAYASHI, H. KONG,
D.H. KRÜGER, S. LACKS, M.G. MARINUS, M. MIYAHARA, R.D. MORGAN,
N.E. MURRAY, V. NAGARAJA, A. PIEKAROWICZ, A. PINGOUD, E. RALEIGH,
D.N. RAO, N. REICH, V.E. REPIN, E.U. SELKER, P.-C. SHAW, D.C. STEIN,
B.L. STODDARD, W. SZYBALSKI, T.A. TRAUTNER, J.L. VAN ETEN,
J.M.B. VITOR, G.G. WILSON, S.-Y. XU

1	Introduction	3
2	General Rules	3
3	Details of Types and Subtypes	6
3.1	Types I, II, III and IV	6
3.2	Type I	6
3.3	Type II	7
3.4	Type IIP	8
3.5	Type IIA	10
3.6	Type IIB	10
3.7	Type IIC	11
3.8	Type IIE	11
3.9	Type IIF	11
3.10	Type IIG	11
3.11	Type IIH	12
3.12	Type IIM	12
3.13	Type IIS	12

3.14	Type IIT	12
3.15	Nicking Enzymes	12
3.16	Control Proteins	13
3.17	Type III	14
3.18	Type IV	14
3.19	Hypothetical Enzymes	15
3.20	Homing Endonucleases	15
3.21	Adherence to These Conventions and Updates	16
	References	16

Restriction-Modification Systems as Minimal Forms of Life 19

I. KOBAYASHI

1	Introduction	19
2	Genomics and Mobility of Restriction-Modification Systems	22
2.1	Genomics	22
2.2	Horizontal Gene Transfer Inferred from Evolutionary Analyses	23
2.3	Presence on Mobile Genetic Elements	23
2.4	Genomic Contexts and Genome Comparison	23
2.4.1	Insertion into an Operon-Like Gene Cluster	26
2.4.2	Insertion with Long Target Duplication	27
2.4.3	Substitution Adjacent to a Large Inversion	27
2.4.4	Apparent Transposition	27
2.4.5	Linkage of a Restriction-Modification Gene Complex with Another Restriction-Modification Gene Complex or a Cell Death-Related Gene	27
2.5	Defective Restriction-Modification Gene Complexes	27
3	Attack on the Host Genome and the Selfish Gene Hypothesis	28
3.1	Post-Segregational Host Cell Killing	28
3.2	Comparison with other Post-Segregational Cell Killing Systems	29
3.3	Selfish Gene Hypothesis	32
3.4	Genomics as Explained by the Selfish Gene Hypothesis	33
4	Gene Regulation in the Life Cycle of Restriction-Modification Systems	34
4.1	Gene Organization	36
4.2	Gene Regulation	37
4.2.1	Restriction Gene Downstream of Modification Gene	37

Contents	IX
4.2.2	Restriction Gene Upstream of Modification Gene 37
4.2.3	Modification Enzyme as a Regulator 37
4.2.4	Regulatory Proteins 38
4.2.5	Type I Restriction-Modification Systems 38
4.3	Restriction-Modification Gene Complexes May Be Able to Multiply Themselves 39
5	Intra-Genomic Competition Involving Restriction-Modification Gene Complexes 40
5.1	Two Restriction-Modification Systems with the Same Recognition Sequence Can Block the Post-Segregational Killing Potential of Each Other . . . 40
5.2	Solitary Methyltransferases Can Attenuate the Post-Segregational Killing Activity of Restriction-Modification Systems 42
5.3	Resident Restriction-Modification Systems Can Abort the Establishment of a Similar Incoming Restriction-Modification System 42
5.4	Suicidal Defense Against Restriction-Modification Gene Complexes 43
5.5	Defense Against Invaders by Restriction-Modification Systems 43
6	Genome Dynamics and Genome Co-Evolution with Restriction-Modification Gene Complexes 44
6.1	Some Restriction-Modification Gene Complexes and Restriction Sites Are Eliminated from the Genome . . . 45
6.2	Mutagenesis and Anti-Mutagenesis 48
6.3	End Joining 48
6.4	Homologous Recombination by Bacteriophages 49
6.5	Cellular Homologous Recombination in Conflict and Collaboration with Restriction-Modification Gene Complexes 49
6.6	Selfish Genome Rearrangement Model 51
7	Towards Natural Classification of Restriction Enzymes . . . 52
8	Application of the Behavior of Restriction-Modification Gene Complexes as Selfish Elements 53
9	A Hypothesis on the Attack by Restriction-Modification Gene Complexes on the Chromosomes 54
10	Conclusions 55

The Integration of Recognition and Cleavage : X-Ray Structures of Pre-Transition State Complex, Post-Reactive Complex and the DNA-Free Endonuclease 137

A. GRIGORESCU, M. HORVATH, P.A. WILKOSZ, K. CHANDRASEKHAR, J.M. ROSENBERG

1 Introduction	137
2 The Pre-Transition State Complex	139

2.1	General Features	139
2.2	DNA Numbering Scheme	140
2.3	Secondary Structure	140
2.4	The EcoRI Kink	142
2.5	Recognition Overview	142
2.6	Sequence-Specific Hydrogen Bonds	143
2.7	Sequence-Specific Interactions Via Bound Water	147
2.8	Sequence-Specific Van der Waals Interactions	147
2.9	Redundancy of Direct Sequence-Specific Interactions	148
2.10	Bound Solvent	149
2.11	“Buried” DNA Phosphate Groups	149
2.12	Solvent-Mediated Contacts to the DNA Bases Flanking the Recognition Site	151
2.13	DNA Minor Groove	152
2.14	Contrasting the 1.85 and 2.7 Å Pre-Transition State Complexes	153
3	The Post-Reactive Complex and the Cleavage Mechanism	154
3.1	EcoRI Endonuclease Crystal Packing	154
3.2	Catalytic Site	155
3.3	The Proposed Cleavage Mechanism	158
3.4	The Integration of EcoRI-Catalyzed DNA Cleavage with Substrate Recognition	162
3.5	Chimeric β Sheets	164
4	Apo-Eco RI Endonuclease (The Protein in the Absence of DNA)	166
4.1	Three Polypeptide Chains in the Asymmetric Unit	166
4.2	Disordered “Arm” Regions	167
4.3	Relation to Crystallographic Packing	167
4.4	Order–Disorder Transition Associated with DNA Binding	169
5	Summary and Conclusions	172
