

# Contents

<b>1</b>	<b>Two-Dimensional Interface Electron Systems</b> .....	1
1.1	Introduction .....	1
1.2	Hovering Electrons Above Superfluid Helium $^4\text{He}$ .....	3
1.3	Electrons Bound to a Helium Film .....	13
1.4	Scattering by Vapor Atoms .....	17
1.5	Electron Scattering at an Uneven Interface .....	21
1.5.1	Capillary Wave Quanta (Ripplons) .....	21
1.5.2	Bloch Approach for Bound Electrons .....	23
1.5.3	Adiabatic Approximation .....	30
1.6	Mobility Along the Helium Surface .....	35
1.7	Other Cryogenic Interfaces .....	39
1.7.1	Electrons on the Surface of Fermi Liquid $^3\text{He}$ .....	39
1.7.2	Solid Interfaces ( $\text{H}_2$ , $\text{Ne}$ ) .....	42
1.8	Retrapping Transition .....	47
1.9	Cyclotron Motion: Quantization and Collision Broadening ...	53
1.9.1	Self-Consistent Approximation .....	56
1.9.2	Cumulant Approach .....	59
<b>2</b>	<b>Strongly Correlated Coulomb Liquid</b> .....	65
2.1	Fundamental Correlation Functions .....	65
2.1.1	General Definitions .....	66
2.1.2	Density–Density Correlation Function .....	68
2.1.3	Dynamical Structure Factor .....	70
2.2	Fluctuational Electric Field Concept .....	78
2.3	Coulomb Narrowing of Landau Levels .....	80
2.3.1	Electric Field Effect on the Density of States .....	80
2.3.2	Ensemble of Electrons with Ultra-Fast Orbit Centers ..	83
2.4	Coulomb Broadening of the Dynamical Structure Factor .....	88
2.5	Plasmons and Magnetoplasmons in Reduced Dimensions ...	91
2.5.1	Interior Excitations .....	92
2.5.2	Edge Waves .....	95
2.6	Electron Correlations and Binding Energy .....	103

<b>3</b>	<b>Quantum Transport Framework for Highly Correlated Electrons</b> .....	115
3.1	An Approach to Universality .....	115
3.2	Phenomenological Analysis .....	119
3.3	Force-Balance Method (DC Case) .....	123
3.4	Memory Function Formulation (AC Case) .....	128
3.5	Comparison with the Kinetic Equation Method .....	136
3.6	Energy Relaxation Rate .....	143
<b>4</b>	<b>Unconventional Hall Effect</b> .....	149
4.1	Transport of Electrons with Discrete Energy Spectrum .....	149
4.2	Experimental Techniques .....	154
4.3	Quantization-Induced Decrease in the Hall Angle .....	157
4.4	Many-Electron Effects .....	159
4.5	Inelastic Magnetotransport .....	171
4.6	Cold Nonlinear Effect .....	176
<b>5</b>	<b>Quantum Cyclotron Resonance</b> .....	183
5.1	Early Achievements .....	183
5.2	Single-Electron Approaches .....	188
5.3	Cyclotron Resonance and Internal Forces .....	193
5.3.1	Many-Electron Effects in the Linear Regime .....	199
5.3.2	Power-Induced Coulomb Narrowing .....	205
5.4	Peak Shift .....	206
<b>6</b>	<b>Interface Polarons</b> .....	213
6.1	Relation to the General Polaron Problem .....	213
6.2	Ground-State Properties .....	217
6.2.1	Strong Coupling Theory .....	217
6.2.2	Detrapping Transition .....	221
6.3	Transport Along the Interface .....	227
6.3.1	Effective Mass .....	227
6.3.2	Viscosity Drag of Self-Trapped Electrons .....	230
6.3.3	Long Mean-Free-Path Regime .....	232
6.3.4	Ripplon-Limited Mobility .....	234
<b>7</b>	<b>Wigner Solid. I. Dynamics on Rigid and Soft Interfaces</b> ...	237
7.1	Contemporary Practice of an Old Hypothesis .....	237
7.2	Phase Diagram .....	241
7.2.1	Boundary Shape .....	242
7.2.2	Dislocation Melting in Two Dimensions .....	244
7.2.3	Quantum Melting Regime .....	246
7.3	Normal Modes and Quantization Under a Magnetic Field ...	249
7.3.1	Phonon Mode Mixing Induced by a Magnetic Field ...	252
7.3.2	Mean-Square Displacement .....	255

7.4	Coupling with Medium Vibrations . . . . .	256
7.4.1	Dimple Lattice and Medium Response Force . . . . .	257
7.4.2	Coupled Modes . . . . .	261
7.4.3	Self-Consistent Debye–Waller Factor . . . . .	267
7.4.4	Coupling Under a Magnetic Field . . . . .	272
7.5	Dynamical Structure Factor . . . . .	274
7.5.1	Conventional Approximations . . . . .	276
7.5.2	Correlations in Two Dimensions . . . . .	277
7.5.3	Strong Coupling and Consistency Requirements . . . . .	280
7.5.4	High Magnetic Field Case . . . . .	282
7.6	Shear Mode Excitation and Specific Heat Measurements . . . . .	284
7.7	Bilayer Electron Crystals . . . . .	286
<b>8</b>	<b>Wigner Solid. II. Transport Properties . . . . .</b>	<b>293</b>
8.1	Solid Current . . . . .	293
8.2	AC Conductivity and Phonon Damping . . . . .	296
8.2.1	Basic Relations . . . . .	296
8.2.2	Spectrum-Splitting Reduction of Phonon Damping . . . . .	306
8.2.3	Resonance Structure of the Collision Rate . . . . .	308
8.3	Mobility over Normal and Superfluid $^3\text{He}$ . . . . .	313
8.3.1	Viscous Drag of the Dimple Lattice . . . . .	314
8.3.2	Long Mean-Free-Path Regime . . . . .	316
8.4	Nonlinear Transport . . . . .	321
8.4.1	Bragg–Cherenkov Scattering . . . . .	326
8.4.2	Sliding Wigner Solid . . . . .	330
	<b>References . . . . .</b>	<b>335</b>
	<b>Index . . . . .</b>	<b>345</b>
