Angular Derivatives in Several Complex Variables

<i>Marco Abate</i>	1
1 Introduction	1
2 One Complex Variable	4
3 Julia's Lemma	12
4 Lindelöf Principles	21
5 The Julia-Wolff-Carathéodory Theorem	32
References	45

Real Methods in Complex Dynamics

<i>John Erik Fornæss</i>	49
1 Lecture 1: Introduction to Complex Dynamics and Its Methods	49
1.1 Introduction	49
1.2 General Remarks on Dynamics	53
1.3 An Introduction to Complex Dynamics and Its Methods	56
2 Lecture 2: Basic Complex Dynamics in Higher Dimension	62
2.1 Local Dynamics	62
2.2 Global Dynamics	71
2.3 Fatou Components	74
3 Lecture 3: Saddle Points for Hénon Maps	77
3.1 Elementary Properties of Hénon Maps	78
3.2 Ergodicity and Measure Hyperbolicity	79
3.3 Density of Saddle Points	83
4 Lecture 4: Saddle Hyperbolicity for Hénon Maps	87
4.1 J and J^*	87
4.2 Proof of Theorem 4.10	91
4.3 Proof of Theorem 4.9	96
References	105

Local Equivalence Problems for Real Submanifolds in Complex Spaces

<i>Xiaojun Huang</i>	109
1 Global and Local Equivalence Problems	109
2 Formal Theory for Levi Non-degenerate Real Hypersurfaces	113
2.1 General Theory for Formal Hypersurfaces	113
2.2 \mathcal{H}_k -Space and Hypersurfaces in the \mathcal{H}_k -Normal Form	119
2.3 Application to the Rigidity and Non-embeddability Problems ...	124
2.4 Chern-Moser Normal Space \mathcal{N}_{CH}	128
3 Bishop Surfaces with Vanishing Bishop Invariants	129
3.1 Formal Theory for Bishop Surfaces with Vanishing Bishop Invariant	131
4 Moser-Webster's Theory on Bishop Surfaces with Non-exceptional Bishop Invariants	140
4.1 Complexification \mathcal{M} of M and a Pair of Involutions Associated with \mathcal{M}	141
4.2 Linear Theory of a Pair of Involutions Intertwined by a Conjugate Holomorphic Involution	142
4.3 General Theory on the Involutions and the Moser-Webster Normal Form	144
5 Geometric Method to the Study of Local Equivalence Problems	147
5.1 Cartan's Theory on the Equivalent Problem	147
5.2 Segre Family of Real Analytic Hypersurfaces	153
5.3 Cartan-Chern-Moser Theory for Germs of Strongly Pseudoconvex Hypersurfaces	159
References	161

Introduction to a General Theory of Boundary Values

<i>Jean-Pierre Rosay</i>	165
1 Introduction – Basic Definitions	167
1.1 What Should a General Notion of Boundary Value Be?	167
1.2 Definition of Strong Boundary Value (Global Case)	167
1.3 Remarks on Smooth (Not Real Analytic) Boundaries	168
1.4 Analytic Functionals	168
1.5 Analytic Functional as Boundary Values	168
1.6 Some Basic Properties of Analytic Functionals	169
Carriers – Martineau's Theorem	169
Local Analytic Functionals	170
1.7 Hyperfunctions	170
The Notion of Functional (Analytic Functional or Distribution, etc.) Carried by a Set, Defined Modulo Similar Functionals Carried by the Boundary of that Set	170
Hyperfunctions	171
1.8 Limits	172

2 Theory of Boundary Values on the Unit Disc.....172

2.1 Functions $u(t, \theta)$ That Have Strong Boundary Values
(Along $t = 0$)173

2.2 Boundary Values of Holomorphic Functions on the Unit Disc ...173

2.3 Independence on the Defining Function174

2.4 The Role of Subharmonicity (Illustrated Here by Discussing
the Independence on the Space of Test Functions)175

3 The Hahn Banach Theorem in the Theory of Analytic Functionals...177

3.1 A Hahn Banach Theorem178

3.2 Some Comments178

3.3 The Notion of Good Compact Set180

3.4 The Case of Non-Stein Manifolds180

4 Spectral Theory181

5 Non-linear Paley Wiener Theory and Local Theory
of Boundary Values182

5.1 The Paley Wiener Theory182

5.2 Application186

5.3 Application to a Local Theory of Boundary Values186
