Contents

Chapter 1. 1

Humanization of soft computing agents

Rajiv Khosla, Qiubang Li, and Chris Lai

1 Introduction 1
2 Human-centered system development framework 2
3 Distributed multi-agent architecture 4
3.1 Problem solving ontology layer 5
3.2 Optimization layer 9
3.3 Tool or technology layer 11
4 Human-centered modelling using soft computing multi-agent architecture 14
4.1 Human-centeredness and problem solving agent layer 14
4.1.1 CRM model of Internet-banking 16
4.1.2 Decomposition phase problem solving agent and CRM 17
4.1.3 Control phase problem solving agent 18
4.1.4 Decision phase problem solving agent 19
4.2 Unstained cell image processing 21
4.3 Human-centeredness and technology agent layer 25
5 Conclusion 26
References 27

Chapter 2. 31

Software agents for ubiquitous computing

Sasu Tarkoma, Mikko Laukkanen, Kimmo Raatikainen

1 Introduction 31
2 Ubiquitous computing 33
2.1 Overview 33
2.2 Wireless networks and roaming 34
2.3 Client devices 35

2.4 Location- and context-aware services 36
2.5 Technology support 37
2.5.1 Java – the enabling technology for software agents ... 37
2.5.2 Other technologies 38
3 Ubiquitous agents 40
3.1 Overview 40
3.2 The FIPA architecture 44
3.3 Agent platforms 46
3.3.1 JADE-LEAP 47
3.3.2 FIPA-OS and MicroFIPA-OS 47
3.4 Proxy-based approaches 48
3.5 Agent communication 49
3.6 Events for agents 49
4 Agent-based service provision and deployment 50
4.1 Agent and service deployment 50
4.2 Service partitioning based on the environment 52
4.3 Example scenario: recommendation service 54
4.4 CRUMPET 57
5 Conclusions 59
References 60

Chapter 3. **63**
Agents-based knowledge logistics
Alexander Smirnov, Mikhail Pashkin, Nikolai Chilov, and Tatiana Levashova

1 Introduction 63
2 KSNet-approach: major ideas 67
3 Features of agent community in the system “KSNet” 69
4 Communication, interaction and negotiation in the KL system 74
4.1 Conventional CNP 75
4.2 Constraint-based negotiation 76
4.3 Modifications of interaction 77
4.4 Example of utilizing constraint-based CNP 77

5 Implementation of agent community 84
6 Case study: health service logistics 90
7 Case study: virtual supply network 93
8 Conclusion 94
Acknowledgements 96
References 96

Chapter 4. **103**
Architectural styles and patterns for multi-agent systems
Manuel Kolp, T. Tung Do, Stéphane Faulkner, and T.T. Hang Hoang

1 Introduction 103
2 Organizational architectural styles 106
2.1 Applying organizational styles 111
2.2 Evaluation 114
3 Social patterns 116
3.1 Modeling social patterns 117
3.1.1 Social dimension 118
3.1.2 Intentional dimension 118
3.1.3 Structural dimension 120
3.1.4 Communication dimension 125
3.1.5 Dynamic dimension 126
3.2 Applying the patterns 128
4 Conclusion 129
References 130

Chapter 5. **133**
Design and behavior of a massive organization of agents
Alain Cardon

1 Introduction 133
2 The systems with particles 136
2.1 The unsteady systems 138
2.2 Operators of determination of the behavior for an unsteady system 140

3 The object approach: a very controlled process of construction and run of systems 143
3.1 The object approach and the software engineering 144
3.2 Objects and object-oriented design of systems 145
3.3 Limits of the object approach 147
4 Massive multi-agent systems 148
4.1 Agents 149
4.2 Nondeterminism and instability in massive multi-agent systems 152
4.3 An agentification method for the massive multi-agent systems 155
5 Analysis of the behavior of a massive agent organization: the control problem 162
5.1 The characterization of an agent organization 163
5.2 The morphological space, the correspondent of the space of phases for the MMAS 165
5.3 The organization of morphological agents assuring the representation of the aspectual organization 171
5.4 Characters of coherent groups 175
5.5 Evocation agents and self-adaptability of the system 177
6 Entropy and equation of trajectory of MMAS 180
6.1 Entropy 181
6.2 Equation of trajectory: a reduction with regard to the morphological analysis 182
6.3 Validity of the state equations 184
6.4 Degraded forms of the state equation 185
7 Conclusion 185
References 187

Chapter 6. **191**
Developing agent-based applications with JADE
F. Bergenti, A. Poggi, G. Rimassa, P. Turci and M. Tomaiuolo

1 Introduction 191
2 JADE 193

2.1 Platform architecture 193
2.2 Agent architecture 196
3 LEAP 199
3.1 LEAP architecture 201
4 CoMMA 203
4.1 CoMMA architecture 204
5 Agentcities 206
5.1 Network 207
5.2 Service composition 208
6 Conclusions 210
Acknowledgments 211
References 212

Chapter 7. **215**
A collective can do better
N.D. Monekosso and P. Remagnino

1 Introduction 215
2 Insect behaviour can be inspiring 217
3 Can nature be mimicked? 219
3.1 Applying real ant behaviour to computational systems 219
3.2 Solving classic optimisation problems 222
3.3 Telecommunications applications 223
3.4 Robot navigation applications 224
3.5 Other robotic applications 224
3.6 Image processing applications 225
4 Combining reinforcement learning and synthetic pheromones 225
4.1 Reinforcement learning 225
4.2 Synthetic pheromones and Q-learning 226
5 Cooperative robotic transport 232
6 Conclusions 232
References 233

Chapter 8. **239**
Coordinating multi-agent assistants with an application by means of computational reflection
A. Di Stefano, G. Pappalardo, C. Santoro, and E. Tramontana

1 Introduction 240
2 The motivation for a multi-assistant architecture 243
2.1 Example: extending a Web browser with assistant agents 244
3 The multi-agent reflective architecture 246
3.1 Computational reflection 247
3.1.1 Using Javassist 248
3.2 The architecture 251
3.3 Coordinator agent 253
3.4 Coordinator-assistants interactions 257
3.5 A concrete example: an assistant that highlights keywords for a Web browser 259
4 A case study: e-commerce assistants for a Web browser 264
4.1 User profiler assistant 265
4.2 Data extraction assistant 268
4.3 Cart manager assistant 270
5 Concluding remarks 272
References 274

Chapter 9. **279**
Learning by exchanging advice
Eugénio Oliveira and Luís Nunes

1 Introduction 279
2 Communicating to improve learning: historical notes and review 281
2.1 Early work on exchange of information during learning 281
2.2 Recent related work 282
3 Advice exchange 283
3.1 Exchanging information during learning 283

3.1.1 What type of information? 284
3.1.2 How to integrate this information with the usual learning process? 285
3.1.3 When should an agent request/accept information? . 285
3.1.4 Where to get information? 290
4 Experiments 292
4.1 Predator-prey 294
4.2 Traffic control 298
4.3 Learning algorithms 301
5 Results and discussion 304
5.1 Predator-prey 304
5.2 Traffic control 307
6 Conclusions and future work 309
Acknowledgments 311
References 311

Chapter 10. **315**
Adaptation and mutation in multi-agent systems and beyond
Ladislau Bölöni and Dan Cristian Marinescu

1 Introduction 315
2 A taxonomy 317
2.1 Alternative names 319
2.2 Classification criteria 319
2.2.1 The amplitude of the change: weak vs. strong mutability 320
2.2.2 The granularity of mutation 321
2.2.3 The continuity of interactions: runtime vs. stoptime 322
2.2.4 The initiator of the mutation 322
2.2.5 Mutation technique 323
2.3 A taxonomy of mutations 324
2.4 Other classification approaches 325
3 A formal description of mutability 325
3.1 Agent models and mutability 325
3.2 A multiplane state machine model of agent behavior ... 328

3.3 Modelling agent behavior 329
3.3.1 Decomposition in the plane. expressing “change” ... 330
3.3.2 Expressing concurrency 331
3.4 Mutation operators and invariance properties 332
3.5 How useful are the invariance properties? 334
4 A software engineering perspective on adaptive and mutable agents 336
4.1 Adding new functionality to the agent 338
4.2 Removing functionality from an agent 341
4.3 Adapting to new requirements 343
4.4 Splitting and merging agents 346
5 Conclusions 347
References 349

Chapter 11. **355**
Intelligent action acquisition for animated learning agents
Adam Szarowicz, Marek Mittmann, Jaroslaw Francik

1 Introduction 355
2 Current state of the art in automatic character animation .. 357
2.1 General animation architectures 357
2.2 Physics-based controllers 361
2.3 Crowd simulation 362
3 Overview of other concepts 363
3.1 Q-learning 363
3.2 The agent’s senses: collision detection and avoiding 364
3.3 Agent architectures 366
4 Implementation of the Q-learning 367
5 System implementation and results 370
5.1 The framework 370
5.2 Results 372
5.3 Alternative algorithms 378
6 Conclusions and summary 378
Acknowledgements 380
References 380

Chapter 12. **387**
Using stationary and mobile agents for information retrieval and e-commerce
Samuel Pierre

1 Basic concepts and background 388
1.1 Agent and multi-agent systems 388
1.2 Cooperation and communication mechanisms 390
1.2.1 Communication among agents 390
1.2.2 Cooperation among agents 392
1.3 Mobile agent and mobile code 394
2 Multi-agent architecture for information retrieval 396
2.1 Mobile agent information retrieval 397
2.2 Characterization of the architecture 399
2.3 Experimental number application 408
2.3.1 Principles of the application 408
2.3.2 Design choices and modifications to the initial application 409
2.4 Internet picture retrieval application 410
3 Implementation of the information retrieval architecture 411
3.1 Generic classes and interfaces 411
3.2 Agents 414
3.3 Implementation and testing environment 417
4 Evaluation of the information retrieval architecture 419
4.1 Transportation measures 419
4.2 Information retrieval scenarios 422
5 Multi-agent architecture for product retrieval 429
5.1 Description of the problem and general scenario 429
5.2 Solution and suggested algorithms 431
5.3 Architecture and agent structure 433
5.4 Implementation and performance evaluation 436
6 Conclusion 444
References 446
