## Incomplete and Asymmetric Information in Asset Pricing Theory

<i>Kerry Back</i> .....	1
1 Filtering Theory .....	1
1.1 Kalman-Bucy Filter .....	3
1.2 Two-State Markov Chain .....	4
2 Incomplete Information .....	5
2.1 Seminal Work .....	5
2.2 Markov Chain Models of Production Economies .....	6
2.3 Markov Chain Models of Pure Exchange Economies .....	7
2.4 Heterogeneous Beliefs .....	11
3 Asymmetric Information .....	12
3.1 Anticipative Information .....	12
3.2 Rational Expectations Models .....	13
3.3 Kyle Model .....	16
3.4 Continuous-Time Kyle Model .....	18
3.5 Multiple Informed Traders in the Kyle Model .....	20
References .....	23

## Modeling and Valuation of Credit Risk

<i>Tomasz R. Bielecki, Monique Jeanblanc, Marek Rutkowski</i> .....	27
1 Introduction .....	27
2 Structural Approach .....	29
2.1 Basic Assumptions .....	29
Defaultable Claims .....	29
Risk-Neutral Valuation Formula .....	31
Defaultable Zero-Coupon Bond .....	32
2.2 Classic Structural Models .....	34
Merton's Model .....	34
Black and Cox Model .....	37
2.3 Stochastic Interest Rates .....	43

2.4	Credit Spreads: A Case Study .....	45
2.5	Comments on Structural Models .....	46
3	Intensity-Based Approach .....	47
3.1	Hazard Function .....	47
Hazard Function of a Random Time .....	48	
Associated Martingales .....	49	
Change of a Probability Measure .....	50	
Martingale Hazard Function .....	53	
Defaultable Bonds: Deterministic Intensity .....	53	
3.2	Hazard Processes .....	55
Hazard Process of a Random Time .....	56	
Valuation of Defaultable Claims .....	57	
Alternative Recovery Rules .....	59	
Defaultable Bonds: Stochastic Intensity .....	63	
Martingale Hazard Process .....	64	
Martingale Hypothesis .....	65	
Canonical Construction .....	67	
Kusuoka's Counter-Example .....	69	
Change of a Probability .....	70	
Statistical Probability .....	72	
Change of a Numeraire .....	74	
Preprice of a Defaultable Claim .....	77	
Credit Default Swap .....	79	
A Practical Example .....	82	
3.3	Martingale Approach .....	84
Standing Assumptions .....	85	
Valuation of Defaultable Claims .....	85	
Martingale Approach under (H.1) .....	87	
3.4	Further Developments .....	88
Default-Adjusted Martingale Measure .....	88	
Hybrid Models .....	89	
Unified Approach .....	90	
3.5	Comments on Intensity-Based Models .....	90
4	Dependent Defaults and Credit Migrations .....	91
4.1	Basket Credit Derivatives .....	92
The $i^{\text{th}}$ -to-Default Contingent Claims .....	92	
Case of Two Entities .....	93	
4.2	Conditionally Independent Defaults .....	94
Canonical Construction .....	94	
Independent Default Times .....	95	
Signed Intensities .....	96	
Valuation of FDC and LDC .....	96	
General Valuation Formula .....	97	
Default Swap of Basket Type .....	98	

4.3	Copula-Based Approaches . . . . .	99
	Direct Application . . . . .	100
	Indirect Application . . . . .	100
	Simplified Version . . . . .	102
4.4	Jarrow and Yu Model . . . . .	103
	Construction and Properties of the Model . . . . .	103
	Bond Valuation . . . . .	105
4.5	Extension of the Jarrow and Yu Model . . . . .	106
	Kusuoka's Construction . . . . .	107
	Interpretation of Intensities . . . . .	108
	Bond Valuation . . . . .	108
4.6	Dependent Intensities of Credit Migrations . . . . .	109
	Extension of Kusuoka's Construction . . . . .	109
4.7	Dynamics of Dependent Credit Ratings . . . . .	112
4.8	Defaultable Term Structure . . . . .	113
	Standing Assumptions . . . . .	113
	Credit Migration Process . . . . .	116
	Defaultable Term Structure . . . . .	117
	Premia for Interest Rate and Credit Event Risks . . . . .	119
	Defaultable Coupon Bond . . . . .	120
	Examples of Credit Derivatives . . . . .	121
4.9	Concluding Remarks . . . . .	122
	References . . . . .	123

## **Stochastic Control with Application in Insurance**

<i>Christian Hipp</i> . . . . .	127	
1	Preface . . . . .	127
2	Introduction Into Insurance Risk . . . . .	128
2.1	The Lundberg Risk Model . . . . .	128
2.2	Alternatives . . . . .	129
2.3	Ruin Probability . . . . .	129
2.4	Asymptotic Behavior For Ruin Probabilities . . . . .	131
3	Possible Control Variables and Stochastic Control . . . . .	132
3.1	Possible Control Variables . . . . .	132
	Investment, One Risky Asset . . . . .	132
	Investment, Two or More Risky Assets . . . . .	133
	Proportional Reinsurance . . . . .	134
	Unlimited XL Reinsurance . . . . .	134
	XL-Reinsurance . . . . .	135
	Premium Control . . . . .	135
	Control of New Business . . . . .	135
3.2	Stochastic Control . . . . .	136
	Objective Functions . . . . .	136
	Infinitesimal Generators . . . . .	137
	Hamilton-Jacobi-Bellman Equations . . . . .	139

Verification Argument .....	141
Steps for Solution .....	143
<b>4 Optimal Investment for Insurers .....</b>	<b>143</b>
4.1 HJB and its Handy Form.....	143
4.2 Existence of a Solution .....	145
4.3 Exponential Claim Sizes.....	145
4.4 Two or More Risky Assets.....	147
<b>5 Optimal Reinsurance and Optimal New Business .....</b>	<b>148</b>
5.1 Optimal Proportional Reinsurance.....	150
5.2 Optimal Unlimited XL Reinsurance.....	151
5.3 Optimal XL Reinsurance .....	152
5.4 Optimal New Business .....	153
<b>6 Asymptotic Behavior for Value Function and Strategies .....</b>	<b>154</b>
6.1 Optimal Investment: Exponential Claims .....	154
6.2 Optimal Investment: Small Claims.....	154
6.3 Optimal Investment: Large Claims .....	155
6.4 Optimal Reinsurance .....	156
<b>7 A Control Problem with Constraint: Dividends and Ruin .....</b>	<b>157</b>
7.1 A Simple Insurance Model with Dividend Payments .....	157
7.2 Modified HJB Equation .....	158
7.3 Numerical Example and Conjectures .....	159
7.4 Earlier and Further Work .....	161
<b>8 Conclusions.....</b>	<b>162</b>
<b>References .....</b>	<b>163</b>

## Nonlinear Expectations, Nonlinear Evaluations and Risk Measures

<i>Shige Peng .....</i>	165
<b>1 Introduction .....</b>	<b>165</b>
1.1 Searching the Mechanism of Evaluations of Risky Assets .....	165
1.2 Axiomatic Assumptions for Evaluations of Derivatives .....	166
General Situations: $\mathcal{F}_t^X$ -Consistent Nonlinear Evaluations .....	166
$\mathcal{F}_t^X$ -Consistent Nonlinear Expectations .....	167
1.3 Organization of the Lecture.....	168
<b>2 Brownian Filtration Consistent Evaluations and Expectations .....</b>	<b>169</b>
2.1 Main Notations and Definitions .....	169
2.2 $\mathcal{F}_t$ -Consistent Nonlinear Expectations .....	171
2.3 $\mathcal{F}_t$ -Consistent Nonlinear Evaluations .....	173
<b>3 Backward Stochastic Differential Equations: <math>g</math>-Evaluations and <math>g</math>-Expectations.....</b>	<b>176</b>
3.1 BSDE: Existence, Uniqueness and Basic Estimates .....	176
3.2 1-Dimensional BSDE .....	182
Comparison Theorem .....	183
Backward Stochastic Monotone Semigroups and $g$ -Evaluations .....	186
Example: Black-Scholes Evaluations .....	188

<i>g</i> -Expectations . . . . .	189
Upcrossing Inequality of $\mathcal{E}^g$ -Supermartingales and Optional Sampling Inequality . . . . .	193
3.3 A Monotonic Limit Theorem of BSDE . . . . .	199
3.4 <i>g</i> -Martingales and (Nonlinear) <i>g</i> -Supermartingale Decomposition Theorem . . . . .	201
4 Finding the Mechanism: Is an $\mathcal{F}$ -Expectation a <i>g</i> -Expectation? . . . . .	204
4.1 $\mathcal{E}^\mu$ -Dominated $\mathcal{F}$ -Expectations . . . . .	204
4.2 $\mathcal{F}_t$ -Consistent Martingales . . . . .	207
4.3 BSDE under $\mathcal{F}_t$ -Consistent Nonlinear Expectations . . . . .	210
4.4 Decomposition Theorem for $\mathcal{E}$ -Supermartingales . . . . .	213
4.5 Representation Theorem of an $\mathcal{F}$ -Expectation by a <i>g</i> -Expectation . . . . .	216
4.6 How to Test and Find <i>g</i> ? . . . . .	219
4.7 A General Situation: $\mathcal{F}_t$ -Evaluation Representation Theorem . . . . .	220
5 Dynamic Risk Measures . . . . .	221
6 Numerical Solution of BSDEs: Euler's Approximation . . . . .	222
7 Appendix . . . . .	224
7.1 Martingale Representation Theorem . . . . .	224
7.2 A Monotonic Limit Theorem of Itô's Processes . . . . .	226
7.3 Optional Stopping Theorem for $\mathcal{E}^g$ -Supermartingale . . . . .	232
References . . . . .	238
