Table of Contents

1. Fluid Mechanics I **1**

1.1 Introduction . . . 1
1.2 Hydrostatics . . . 2
1.2.1 Surface and Volume Forces . . . 2
1.2.2 Applications of the Hydrostatic Equation . . . 3
1.2.3 Hydrostatic Lift . . . 5
1.3 Hydrodynamics . . . 5
1.3.1 Kinematics of Fluid Flows . . . 5
1.3.2 Stream Tube and Filament . . . 7
1.3.3 Applications of Bernoulli's Equation . . . 8
1.4 One-Dimensional Unsteady Flow . . . 10
1.5 Momentum and Moment of Momentum Theorem . . . 12
1.5.1 Momentum Theorem . . . 12
1.5.2 Applications of the Momentum Theorem . . . 13
1.5.3 Flows in Open Channels . . . 17
1.5.4 Moment of Momentum Theorem . . . 18
1.5.5 Applications of the Moment of Momentum Theorem . . . 19
1.6 Parallel Flow of Viscous Fluids . . . 20
1.6.1 Viscosity Laws . . . 21
1.6.2 Plane Shear Flow with Pressure Gradient . . . 22
1.6.3 Laminar Pipe Flow . . . 24
1.7 Turbulent Pipe Flows . . . 25
1.7.1 Momentum Transport in Turbulent Flows . . . 26
1.7.2 Velocity Distribution and Resistance Law . . . 27
1.7.3 Pipes with Non-circular Cross Section . . . 29

2. Fluid Mechanics II **31**

2.1 Introduction . . . 31
2.2 Fundamental Equations of Fluid Mechanics . . . 31
2.2.1 The Continuity Equation . . . 31
2.2.2 The Navier-Stokes Equations . . . 32
2.2.3 The Energy Equation . . . 35
2.2.4 Different Forms of the Energy Equation . . . 36
2.3 Similar Flows . . . 38
2.3.1 Derivation of the Similarity Parameters with the Method of Dimensional Analysis . . . 38
2.3.2 The Method of Differential Equations . . . 40
2.3.3 Physical Meaning of the Similarity Parameters . . . 41
2.4 Creeping Motion . . . 42

2.5 Vortex Theorems 44
2.5.1 Rotation and Circulation 44
2.5.2 Vorticity Transport Equation 45
2.6 Potential Flows of Incompressible Fluids 46
2.6.1 Potential and Stream Function 46
2.6.2 Determination of the Pressure 48
2.6.3 The Complex Stream Function 48
2.6.4 Examples for Plane Incompressible Potential Flows 49
2.6.5 Kutta-Joukowski Theorem 53
2.6.6 Plane Gravitational Waves 54
2.7 Laminar Boundary Layers 55
2.7.1 Boundary-Layer Thickness and Friction Coefficient 56
2.7.2 Boundary-Layer Equations 56
2.7.3 The von Kármán Integral Relation 58
2.7.4 Similar Solution for the Flat Plate at Zero Incidence 59
2.8 Turbulent Boundary Layers 61
2.8.1 Boundary-Layer Equations for Turbulent Flow 61
2.8.2 Turbulent Boundary Layer on the Flat Plate at Zero Incidence 62
2.9 Separation of the Boundary Layer 64
2.10 Selected References 66
2.11 Appendix 66

3. Exercises in Fluid Mechanics **69**
3.1 Problems 69
3.1.1 Hydrostatics 69
3.1.2 Hydrodynamics 71
3.1.3 Momentum and Moment of Momentum Theorem 76
3.1.4 Laminar Flow of Viscous Fluids 80
3.1.5 Pipe Flows 83
3.1.6 Similar Flows 86
3.1.7 Potential Flows of Incompressible Fluids 88
3.1.8 Boundary Layers 91
3.1.9 Drag 92
3.2 Solutions 96
3.2.1 Hydrostatics 96
3.2.2 Hydrodynamics 99
3.2.3 Momentum and Moment of Momentum Theorem 106
3.2.4 Laminar Flow of Viscous Fluids 113
3.2.5 Pipe Flows 119
3.2.6 Similar Flows 123
3.2.7 Potential Flows of Incompressible Fluids 126
3.2.8 Boundary Layers 132
3.2.9 Drag 134

4. Gasdynamics **139**
4.1 Introduction 139
4.2 Thermodynamic Relations 139

4.3 One-Dimensional Steady Gas Flow . . . 141
4.3.1 Conservation Equations . . . 141
4.3.2 The Speed of Sound . . . 142
4.3.3 Integral of the Energy Equation . . . 143
4.3.4 Sonic Conditions . . . 144
4.3.5 The Limiting Velocity . . . 145
4.3.6 Stream Tube with Variable Cross-Section . . . 145
4.4 Normal Compression Shock . . . 147
4.4.1 The Jump Conditions . . . 147
4.4.2 Increase of Entropy Across the Normal Compression Shock . . . 149
4.4.3 Normal Shock in Transonic Flow . . . 150
4.5 Oblique Compression Shock . . . 151
4.5.1 Jump Conditions and Turning of the Flow . . . 151
4.5.2 Weak and Strong Solution . . . 153
4.5.3 Heart-Curve Diagram and Hodograph Plane . . . 154
4.5.4 Weak Compression Shocks . . . 155
4.6 The Prandtl-Meyer Flow . . . 156
4.6.1 Isentropic Change of Velocity . . . 157
4.6.2 Corner Flow . . . 158
4.6.3 Interaction Between Shock Waves and Expansions . . . 159
4.7 Lift and Wave Drag in Supersonic Flow . . . 160
4.7.1 The Wave Drag . . . 161
4.7.2 Lift of a Flat Plate at Angle of Attack . . . 161
4.7.3 Thin Profiles at Angle of Attack . . . 161
4.8 Theory of Characteristics . . . 163
4.8.1 The Crocco Vorticity Theorem . . . 163
4.8.2 The Fundamental Equation of Gasdynamics . . . 164
4.8.3 Compatibility Conditions for Two-Dimensional Flows . . . 166
4.8.4 Computation of Supersonic Flows . . . 167
4.9 Compressible Potential Flows . . . 170
4.9.1 Simplification of the Potential Equation . . . 170
4.9.2 Determination of the Pressure Coefficient . . . 171
4.9.3 Plane Supersonic Flows About Slender Bodies . . . 172
4.9.4 Plane Subsonic Flow About Slender Bodies . . . 174
4.9.5 Flows about Slender Bodies of Revolution . . . 175
4.10 Similarity Rules . . . 178
4.10.1 Similarity Rules for Plane Flows After the Linearized Theory . . . 178
4.10.2 Application of the Similarity Rules to Plane Flows . . . 180
4.10.3 Similarity Rules for Axially Symmetric Flows . . . 182
4.10.4 Similarity Rules for Plane Transonic Flows . . . 183
4.11 Selected References . . . 184

5. Exercises in Gasdynamics 185
5.1 Problems . . . 185
5.1.1 One-Dimensional Steady Flows of Gases . . . 185
5.1.2 Normal Compression Shock . . . 188
5.1.3 Oblique Compression Shock . . . 191
5.1.4 Expansions and Compression Shocks . . . 193
5.1.5 Lift and Wave Drag – Small-Perturbation Theory . . . 196

5.1.6 Theory of Characteristics . . . 198
5.1.7 Compressible Potential Flows and Similarity Rules . . . 199
5.2 Solutions . . . 203
5.2.1 One-Dimensional Steady Flows of Gases . . . 203
5.2.2 Normal Compression Shock . . . 208
5.2.3 Oblique Compression Shock . . . 211
5.2.4 Expansions and Compression Shocks . . . 214
5.2.5 Lift and Wave Drag – Small-Perturbation Theory . . . 217
5.2.6 Theory of Characteristics . . . 219
5.2.7 Compressible Potential Flows and Similarity Rules . . . 221
5.3 Appendix . . . 225

6. Aerodynamics Laboratory 233
6.1 Wind Tunnel for Low Speeds (Göttingen-Type Wind Tunnel) . . . 233
6.1.1 Preliminary Remarks . . . 233
6.1.2 Wind Tunnels for Low Speeds . . . 234
6.1.3 Charakteristic Data of a Wind Tunnel . . . 235
6.1.4 Method of Test and Measuring Technique . . . 237
6.1.5 Evaluation . . . 243
6.2 Pressure Distribution on a Half Body . . . 247
6.2.1 Determination of the Contour and the Pressure Distribution . . . 247
6.2.2 Measurement of the Pressure . . . 248
6.2.3 The Hele-Shaw Flow . . . 249
6.2.4 Evaluation . . . 251
6.3 Sphere in Incompressible Flow . . . 253
6.3.1 Fundamentals . . . 253
6.3.2 Shift of the Critical Reynolds Number by Various Factors of Influence . . . 257
6.3.3 Method of Test . . . 258
6.3.4 Evaluation . . . 259
6.4 Flat-Plate Boundary Layer . . . 262
6.4.1 Introductory Remarks . . . 262
6.4.2 Method of Test . . . 263
6.4.3 Prediction Methods . . . 265
6.4.4 Evaluation . . . 267
6.4.5 Questions . . . 268
6.5 Pressure Distribution on a Wing . . . 271
6.5.1 Wing of Infinite Span . . . 271
6.5.2 Wing of Finite Span . . . 273
6.5.3 Method of Test . . . 278
6.5.4 Evaluation . . . 280
6.6 Aerodynamic Forces Acting on a Wing . . . 283
6.6.1 Nomenclature of Profiles . . . 283
6.6.2 Measurement of Aerodynamic Forces . . . 283
6.6.3 Application of Measured Data to Full-Scale Configurations . . . 287
6.6.4 Evaluation . . . 295
6.7 Water Analogy – Propagation of Surface Waves in Shallow Water and of Pressure Waves in Gases . . . 299
6.7.1 Introduction . . . 299

6.7.2 The Water Analogy of Compressible Flow . . . 299
6.7.3 The Experiment . . . 304
6.7.4 Evaluation . . . 305
6.8 Resistance and Losses in Compressible Pipe Flow . . . 307
6.8.1 Flow Resistance of a Pipe with Inserted Throttle (Orificee, Nozzle, Valve etc.) . . . 307
6.8.2 Friction Resistance of a Pipe Without a Throttle . . . 307
6.8.3 Resistance of an Orifice . . . 311
6.8.4 Evaluation . . . 313
6.8.5 Problems . . . 316
6.9 Measuring Methods for Compressible Flows . . . 320
6.9.1 Tabular Summary of Measuring Methods . . . 320
6.9.2 Optical Methods for Density Measurements . . . 320
6.9.3 Optical Setup . . . 325
6.9.4 Measurements of Velocities and Turbulent Fluctuation Velocities . . . 326
6.9.5 Evaluation . . . 327
6.10 Supersonic Wind Tunnel and Compression Shock at the Wedge . . . 329
6.10.1 Introduction . . . 329
6.10.2 Classification of Wind Tunnels . . . 329
6.10.3 Elements of a Supersonic Tunnel . . . 332
6.10.4 The Oblique Compression Shock . . . 333
6.10.5 Description of the Experiment . . . 337
6.10.6 Evaluation . . . 339
6.11 Sphere in Compressible Flow . . . 342
6.11.1 Introduction . . . 342
6.11.2 The Experiment . . . 342
6.11.3 Fundamentals of the Compressible Flow About a Sphere . . . 344
6.11.4 Evaluation . . . 348
6.11.5 Questions . . . 348

Index **351**
