Contents

1 Basic Commutative Algebra 1 1

1.1 The Spectrum 1

1.2 Modules 6

1.3 Localization 15

1.3.1 Multiplicatively Closed Subsets 15

1.3.2 Rings and Modules of Fractions 17

1.3.3 Localization Technique 20

1.3.4 Prime Ideals of a Localized Ring 21

1.4 Integral Ring Extensions 23

1.4.1 Integral Elements 23

1.4.2 Integrality and Primes 27

1.5 Direct Sums and Products 30

1.6 The Tensor Product 38

1.6.1 Definition 38

1.6.2 Functoriality 42

1.6.3 Exactness 43

1.6.4 Flat Algebras 45

1.6.5 Exterior Powers 46

2 Introduction to Projective Modules 49
2.1 Generalities on Projective Modules 49
2.2 Rank 52
2.3 Special Residue Class Rings 56
2.4 Projective Modules of Rank 1 59

3 Stably Free Modules 69
3.1 Generalities 69
3.2 Localized Polynomial Rings 74
3.3 Action of $\mathrm{GL}_n(R)$ on $\mathrm{Um}_n(R)$ 75
3.4 Elementary Action on Unimodular Rows 76
3.5 Examples of Completable Rows 80
3.6 Direct sums of a stably free module 82
3.7 Stable Freeness over Polynomial Rings 83
3.7.1 Schanuel's Lemma 83
3.7.2 Proof of Stable Freeness 84

4 Serre's Conjecture 87
4.1 Elementary Divisors 87
4.2 Horrocks' Theorem 89
4.3 Quillen's Local Global Principle 91
4.4 Suslin's Proof 98
4.5 Vaserstein's Proof 101

5 Continuous Vector Bundles 105
5.1 Categories and Functors 105
5.2 Vector Bundles 108
5.3 Vector Bundles and Projective Modules 114
5.4 Examples 121
5.5 Vector Bundles and Grassmannians 126
5.5.1 The Direct Limit and Infinite Matrices 126

5.5.2 Metrization of the Set of Continuous Maps 128
5.5.3 Correspondence of Vector Bundles and Classes of Maps 129
5.6 Projective Spaces 131
5.7 Algebraization of Vector Bundles 135
5.7.1 Projective Modules over Topological Rings 136
5.7.2 Projective Modules as Pull-Backs 140
5.7.3 Construction of a Noetherian Subalgebra 143

6 Basic Commutative Algebra II 149
6.1 Noetherian Rings and Modules 149
6.2 Irreducible Sets 152
6.3 Dimension of Rings 154
6.4 Artinian Rings 156
6.5 Small Dimension Theorem 158
6.6 Noether Normalization 162
6.7 Affine Algebras 164
6.8 Hilbert's Nullstellensatz 168
6.9 Dimension of a Polynomial ring 171

7 Splitting Theorem and Lindel's Proof 175
7.1 Serre's Splitting Theorem 175
7.2 Lindel's Proof 180

8 Regular Rings 185
8.1 Definition 185
8.2 Regular Residue Class Rings 187
8.3 Homological Dimension 189
8.4 Associated Prime Ideals 194
8.5 Homological Characterization 196
8.6 Dedekind Rings 200
8.7 Examples 203
8.8 Modules over Dedekind Rings 205
8.9 Finiteness of Class Numbers 209

9 Number of Generators 213
9.1 The Problems 213
9.2 Regular sequences 216
9.3 Forster-Swan Theorem 221
9.3.1 Basic elements 226
9.3.2 Basic elements and the Forster-Swan theorem 227
9.3.3 Forster-Swan theorem via K-theory 228
9.4 Eisenbud-Evans theorem 231
9.5 Varieties as Intersections of n Hypersurfaces 236
9.6 The Eisenbud-Evans conjectures 238

10 Curves as Complete Intersection 241
10.1 A Motivation of Serre's Conjecture 241
10.2 The Conormal Module 243
10.3 Local Complete Intersection Curves 245
10.4 Cowsik-Nori Theorem 248
10.4.1 A Projection Lemma 248
10.4.2 Proof of Cowsik-Nori 251

A Normality of $\mathbf{E}_n$ in $\mathbf{GL}_n$ 253

B Some Homological Algebra 257
B.1 Extensions and Ext^1 257
B.2 Derived functors 264

C Complete intersections and Connectedness 269

D Odds and Ends 271

E Exercises 289
