### Part I Random Matrices: from Physics to Number Theory

---

|  |     |
|--|-----|
| <b>Quantum and Arithmetical Chaos</b><br><i>Eugene Bogomolny</i> .....   | 3   |
| <b>Notes on L-functions and Random Matrix Theory</b><br><i>J. Brian Conrey</i> .....                                   | 107 |
| <b>Energy Level Statistics, Lattice Point Problems, and Almost Modular Functions</b><br><i>Jens Marklof</i> .....      | 163 |
| <b>Arithmetic Quantum Chaos of Maass Waveforms</b><br><i>H. Then</i> .....   | 183 |
| <b>Large <math>N</math> Expansion for Normal and Complex Matrix Ensembles</b><br><i>P. Wiegmann, A. Zabrodin</i> ..... | 213 |
| <b>Symmetries Arising from Free Probability Theory</b><br><i>Dan Voiculescu</i> .....                                  | 231 |
| <b>Universality and Randomness for the Graphs and Metric Spaces</b><br><i>A. M. Vershik</i> .....                      | 245 |

---

### Part II Zeta Functions

---

|   |     |
|---|-----|
| <b>From Physics to Number Theory via Noncommutative Geometry</b><br><i>Alain Connes, Matilde Marcolli</i> ..... | 269 |
|---|-----|

XII Contents

**More Zeta Functions for the Riemann Zeros**  
*André Voros* ..... 351

**Hilbert Spaces of Entire Functions and Dirichlet  $L$ -Functions**  
*Jeffrey C. Lagarias* ..... 367

**Dynamical Zeta Functions and Closed Orbits for Geodesic  
and Hyperbolic Flows**  
*Mark Pollicott* ..... 381

---

**Part III Dynamical Systems: interval exchange, flat surfaces, and  
small divisors**

---

**Continued Fraction Algorithms for Interval Exchange Maps:  
an Introduction**  
*Jean-Christophe Yoccoz* ..... 403

**Flat Surfaces**  
*Anton Zorich* ..... 439

**Brjuno Numbers and Dynamical Systems**  
*Guido Gentile* ..... 587

**Some Properties of Real and Complex Brjuno Functions**  
*Stefano Marmi, Pierre Moussa, Jean-Christophe Yoccoz* ..... 603

---

**Part IV Appendices**

---

**List of Participants** ..... 629

**Index** ..... 633
