Are Echinoderms of Interest to Biotechnology?	1
C. Petzelt	
References	5
 Cell Adhesion and Communication: A Lesson from	
Echinoderm Embryos for the Exploitation of New Therapeutic Tools	7
F. Zito, C. Costa, S. Sciarrino, C. Cavalcante, V. Poma, V. Matranga	
1 Introduction	7
2 Why Study Echinoderms?	10
2.1 Echinoderms for Biomedical Research: A Simple Model	
to Study Biological Events Occurring in Higher Organisms .	11
2.1.1 Screening for and Testing of Toxic Substances	11
2.1.2 From Echinoderm Molecules to Mammalian Diseases:	
How Fundamental Research Points to Clinical Trials	12
2.1.3 Highly Conserved Proteins Associated	
with Important Biological Functions	13
3 Use of Echinoderm Embryos to Study the Basic	
Mechanisms of Communication Among Cells	14
3.1 Sea Urchin Embryo Transparency: A Laboratory Study	
on Development and Morphogenesis	17
3.1.1 ECM Patterning in Echinoids During Embryo Development	19
4 Apical Cell Surface	20
4.1 The Apical Lamina	21
4.2 The Hyaline Layer	21
4.2.1 <i>Pl</i> -Nectin: An Example of Signal(s) from Outside	
to Inside the Embryo	22
4.2.2 Other Apical ECM Components	23
5 Basal Cell Surface	24
6 The Blastocoel Matrix	26
7 Receptors to ECM Molecules	26
8 Lateral Cell Surface	27

8.1	Cell–Cell Adhesion and Communication: The Discovery of Toposome	27
8.2	Other Cell–Cell Adhesion Molecules	31
8.3	Cell Junctions	31
9	Signalling Pathways	32
10	Growth Factors	32
11	Concluding Remarks	35
	References	36

Cell Signalling During Sea Urchin Development:

A Model for Assessing Toxicity of Environmental Contaminants 45

C. Angelini, M.G. Aluigi, M. Sgro, S. Trombino, H. Thielecke, C. Falugi

1	Basic Research	46
1.1	Cell-to-Cell Signalling During Sea Urchin Development	46
1.2	Fertilisation	48
1.2.1	First Phase: Sperm Activation	49
1.2.2	Second Phase: Egg Activation	52
1.3	First Cell Cycle	55
1.4	Cleavages	59
1.5	Ongoing Research	60
2	Applied Research	61
2.1	Neurotoxic Contaminants	61
2.1.1	Health Risks	61
2.1.2	Mode of Function of Organophosphates and Carbamates	62
2.1.3	Persistence in the Environment and Crops	62
2.2	Biosensors	63
2.3	Effects of Neurotoxic Compounds on <i>P. lividus</i> Ion Dynamics	63
	References	65

Echinoderm Reactive Oxygen Species (ROS) Production Measured by Peroxidase, Luminol-Enhanced Chemiluminescence (PLCL) as an Immunotoxicological Tool 71

G. Coteur, B. Danis, P. Dubois

1	Introduction	72
2	Measurement of Reactive Oxygen Species (ROS) Production	73
3	Modulation of ROS Production by Environmental Factors	74
4	Impact of Metal Contaminations	75
5	Impact of PCB Contaminations	78
