
Contents

1	Resources of Microcontrollers	1
1.1	In this Chapter	1
1.2	Microcontroller Architectures	1
1.3	The Memory Map	3
1.4	CPU Registers	5
1.4.1	The CPU Registers of HC11	5
1.4.2	The CPU Registers of AVR	6
1.4.3	The CPU Registers of 8051	7
1.5	The Peripheral Interfaces	8
1.6	The Interrupt System	9
1.6.1	General Description of the Interrupt System	9
1.6.2	Distinctive Features of the Interrupt System of HC11	11
1.6.3	Distinctive Features of the Interrupt System of AVR	12
1.6.4	Distinctive Features of the Interrupt System of 8051	12
1.7	Expanding the Resources of Microcontrollers	12
1.7.1	HC11 Operating with External Bus	13
1.7.2	AT90S8515 Operating with External Bus	14
1.7.3	8051 Operating with External Bus	14
1.8	Exercises	15
2	Using the Digital I/O Lines	19
2.1	In this Chapter	19
2.2	Overview of the Parallel I/O System	19
2.3	Electrical Characteristics of the I/O Lines	21
2.4	Controlling the I/O Lines by Software	23
2.5	Exercises	24
3	Using the Asynchronous Serial Interface	27
3.1	In this Chapter	27
3.2	Synchronous vs. Asynchronous Communication	27

3.3	Error Detection in Asynchronous Communication	29
3.4	The General Structure of the Asynchronous Serial Communication Interface	30
3.5	The Serial Communication Interface of 68HC11F1	30
3.6	The Asynchronous Serial Communication Interface of AVR Microcontrollers	35
3.7	The Asynchronous Serial Interface of 8051	36
3.8	Programming the Asynchronous Serial Interface	37
3.8.1	Programming the SCI of HC11	38
3.8.2	Programming the UART of AT90S8535	40
3.8.3	Programming the UART of 8051	41
3.9	Hardware Interfaces for Serial Communication	42
3.9.1	The RS232 Interface	42
3.9.2	Differential Communication. The Interfaces RS422 and RS485	43
3.9.3	The Current Loop Interface	44
3.10	Basic Principles of Networking with Microcontrollers, Using the Asynchronous Serial Interface	45
3.11	Exercises	46
4	Using the Synchronous Serial Interface SPI	49
4.1	In this Chapter	49
4.2	General Description of the SPI	49
4.3	The SPI of HC11 Microcontrollers	50
4.4	The SPI of the AVR Microcontrollers	53
4.5	Examples of Using The SPI	55
4.5.1	Using the SPI To Connect Two Microcontrollers	55
4.5.2	Expanding the I/O Space Using the SPI	56
4.6	Exercises	59
5	Using The I2C Bus	61
5.1	In this Chapter	61
5.2	The Principles of Implementation of the I2C Bus	61
5.2.1	The Start Transfer Condition	62
5.2.2	The Data Transfer on the I2C BuS	62
5.2.3	The ACK Bit	62
5.2.4	The STOP Condition	63
5.3	A Software Implementation of the I2C Protocol	63
5.4	Accessing 24C256 Memory Devices	64
5.5	Exercises	66
6	Using the MCU Timers	67
6.1	In this Chapter	67
6.2	The General Structure and Functions of the Timer System	67

6.3	Distinctive Features of the General-Purpose Timer of HC11	69
6.3.1	The Control and Status Registers of the HC11 Timer	69
6.3.2	Exercises Regarding the Use of the General-Purpose Timer of HC11	73
6.4	Distinctive Feature of the Timer of the AVR Microcontrollers	75
6.4.1	The 8-Bit Timer/Counter Timer0	76
6.4.2	The 16-Bit Timer/Counter Timer1	76
6.4.3	Synopsis of the Timer I/O Registers of AT90S8115	78
6.4.4	Summary of the Unique Features of the AVR Timer	79
6.4.5	Exercises Regarding the Use of AVR Timers	79
6.5	Distinctive Features of the Timer System of the 8051 Microcontrollers	81
6.5.1	The Control and Status Registers of the Timer	82
6.5.2	Description of the Timer Operating Mode 0	83
6.5.3	Description of the Timer Operating Mode 1	83
6.5.4	Description of the Timer Operating Mode 2	84
6.5.5	Description of the Timer Operating Mode 3	84
6.5.6	Using Timer1 as a Baud Rate Generator	85
6.5.7	Exercises for Programming the 8051 Timer	85
6.6	PWM Timers. Principles of Operation	87
6.7	Watchdog Timers	89
6.7.1	The Watchdog of HC11	89
6.7.2	The Watchdog of AT90S8515	90
7	Interfacing to Analog Signals	93
7.1	In This Chapter	93
7.2	The Analog Comparator	93
7.3	The General Structure of the A/D Converter Subsystem	95
7.4	The A/D Converter of the HC11 Family of Microcontrollers	96
7.5	Exercises on Programming the A/D Converter of HC11	98
7.6	The A/D Converter of the AVR Microcontrollers	100
7.7	Exercises on Programming the A/D Converter AT90S8535	101
7.8	Digital-to-Analog Converters	102
7.8.1	The Principles of the D/A Conversion	102
7.8.2	Exercise on Using MX7224	104
8	Using the Internal EEPROM Memory	107
8.1	In this Chapter	107
8.2	Overview of the EEPROM Subsystem	107
8.3	The EEPROM Memory and the CONFIG Register of HC11	107
8.3.1	The Registers Controlling the EEPROM of HC11	108
8.3.2	Software Routines to Erase and Write the EEPROM	109
8.3.3	The CONFIG Register	110
8.4	The EEPROM Memory of the AVR Microcontrollers	111
8.4.1	The Registers of the Interface with the EEPROM Memory	111
8.4.2	Software Routines to Read and Write EEPROM	112

9	HC11 Development Board	115
9.1	In this Chapter	115
9.2	Description of the Hardware Module	115
9.3	Assembling and Testing the Module	117
9.4	Description of the Software Components	119
9.5	Exercises	129
10	AVR Development Board	131
10.1	In this Chapter	131
10.2	The Hardware	131
10.3	Testing the Circuit	134
10.4	The Software	134
10.5	Exercises	144
11	8051 Development Board	145
11.1	In this Chapter	145
11.2	Hardware	145
11.3	The Software	148
11.3.1	Installing the Cross-Assembler	148
11.3.2	Writing and Testing Simple 8051 Programs	149
11.3.3	Loading and Executing Programs in the External Ram Memory	152
11.4	Exercises	154
12	Digital Voltmeter with RS232 Interface	157
12.1	In this Chapter	157
12.2	The Hardware	157
12.3	The Software	157
12.4	Exercises	162
13	Simple RS485 Network with Microcontrollers	163
13.1	In this Chapter	163
13.2	The Hardware	163
13.2.1	The RS232-to-RS485 Converter	164
13.2.2	The Digital Input Module	165
13.2.3	The Analog Input Module	166
13.2.4	Using the AVR Development Board to Emulate TheI SLD and SLA Modules	166
13.3	The Software	167
13.3.1	Description of the Communication Protocol	167
13.3.2	The Software for the SLD Module	169
13.3.3	The Software for the MASTER Device	171
13.4	Exercises	172

14	PI Temperature Controller	173
14.1	In this Chapter	173
14.2	Basic Concepts	173
14.3	Hardware Implementation of a Microcontroller-Based Temperature Controller	177
14.4	Software Implementation of a PI Temperature Controller	179
15	Fuzzy Logic Temperature Controller	185
15.1	In this Chapter	185
15.2	The Principles of Fuzzy Control	185
15.3	A Microcontroller Implementation of a Fuzzy Controller	189
16	Remote Relay Controller over Telephone Lines	193
16.1	In this Chapter	193
16.2	Description of the Hardware Solution	193
16.3	Description of the Software	197
A.1	Glossary of Terms	203
Appendix	202
A.2	Description of the Registers of 68HC11F1	213
A.3	HC11 Instruction Set	215
A.4	An Example of Expanded Structure with HC11	219
A.5	Using HC11 in Bootstrap Mode	221
A.6	The Registers of AT90S8535	224
A.7	AVR Instruction Set	225
A.8	AT90S8515 Operating with External RAM	228
A.9	In-system Programming the AVR AT90S8535	229
A.10	The Special Function Registers of 8051	232
A.11	8051 Instruction Set	233
A.12	An Example of 8051 Operating with External Bus	237
A.13	Programming the Internal Memory of 8051	238
A.14	SPI Seven-Segment Display Units	240
A.15	Description of the Software Utility ASMEDIT	243
B.1	Contents of the Accompanying CD	245
B.2	Recommended Readings and Web References	247
Index	249
