## Part I The Term Structure of Interest Rates

---

<b>1</b>	<b>Data and Instruments of the Term Structure of Interest Rates</b> . . . . .	<b>3</b>
1.1	Time Value of Money and Zero Coupon Bonds . . . . .	3
1.1.1	Treasury Bills . . . . .	4
1.1.2	Discount Factors and Interest Rates . . . . .	5
1.2	Coupon Bearing Bonds . . . . .	6
1.2.1	Treasury Notes and Treasury Bonds . . . . .	7
1.2.2	The STRIPS Program . . . . .	9
1.2.3	Clean Prices . . . . .	10
1.3	Term Structure as Given by Curves . . . . .	11
1.3.1	The Spot (Zero Coupon) Yield Curve . . . . .	11
1.3.2	The Forward Rate Curve and Duration . . . . .	13
1.3.3	Swap Rate Curves . . . . .	14
1.4	Continuous Compounding and Market Conventions . . . . .	17
1.4.1	Day Count Conventions . . . . .	17
1.4.2	Compounding Conventions . . . . .	19
1.4.3	Summary . . . . .	20
1.5	Related Markets . . . . .	21
1.5.1	Municipal Bonds . . . . .	22
1.5.2	Index Linked Bonds . . . . .	22
1.5.3	Corporate Bonds and Credit Markets . . . . .	23
1.5.4	Tax Issues . . . . .	25
1.5.5	Asset Backed Securities . . . . .	25
1.6	Statistical Estimation of the Term Structure . . . . .	25
1.6.1	Yield Curve Estimation . . . . .	26
1.6.2	Parametric Estimation Procedures . . . . .	27
1.6.3	Nonparametric Estimation Procedures . . . . .	30

1.7	Principal Component Analysis . . . . .	33
1.7.1	Principal Components of a Random Vector . . . . .	33
1.7.2	Multivariate Data PCA . . . . .	34
1.7.3	PCA of the Yield Curve . . . . .	36
1.7.4	PCA of the Swap Rate Curve . . . . .	39
	Notes & Complements . . . . .	41
<b>2</b>	<b>Term Structure Factor Models</b> . . . . .	<b>43</b>
2.1	Factor Models for the Term Structure . . . . .	43
2.2	Affine Models . . . . .	46
2.3	Short Rate Models as One-Factor Models . . . . .	49
2.3.1	Incompleteness and Pricing . . . . .	50
2.3.2	Specific Models . . . . .	51
2.3.3	A PDE for Numerical Purposes . . . . .	55
2.3.4	Explicit Pricing Formulae . . . . .	57
2.3.5	Rigid Term Structures for Calibration . . . . .	59
2.4	Term Structure Dynamics . . . . .	60
2.4.1	The Heath–Jarrow–Morton Framework . . . . .	60
2.4.2	Hedging Contingent Claims . . . . .	62
2.4.3	A Shortcoming of the Finite-Rank Models . . . . .	63
2.4.4	The Musiela Notation . . . . .	64
2.4.5	Random Field Formulation . . . . .	66
2.5	Appendices . . . . .	67
	Notes & Complements . . . . .	71

---

**Part II Infinite Dimensional Stochastic Analysis**

---

<b>3</b>	<b>Infinite Dimensional Integration Theory</b> . . . . .	<b>75</b>
3.1	Introduction . . . . .	75
3.1.1	The Setting . . . . .	77
3.1.2	Distributions of Gaussian Processes . . . . .	78
3.2	Gaussian Measures in Banach Spaces and Examples . . . . .	80
3.2.1	Integrability Properties . . . . .	82
3.2.2	Isonormal Processes . . . . .	83
3.3	Reproducing Kernel Hilbert Space . . . . .	84
3.3.1	RKHS of Gaussian Processes . . . . .	86
3.3.2	The RKHS of the Classical Wiener Measure . . . . .	87
3.4	Topological Supports, Carriers, Equivalence and Singularity . . . . .	88
3.4.1	Topological Supports of Gaussian Measures . . . . .	88
3.4.2	Equivalence and Singularity of Gaussian Measures . . . . .	89
3.5	Series Expansions . . . . .	91

3.6	Cylindrical Measures . . . . .	92
3.6.1	The Canonical (Gaussian) Cylindrical Measure of a Hilbert Space . . . . .	93
3.6.2	Integration with Respect to a Cylindrical Measure . . . . .	94
3.6.3	Characteristic Functions and Bochner's Theorem . . . . .	94
3.6.4	Radonification of Cylindrical Measures . . . . .	95
3.7	Appendices . . . . .	96
	Notes & Complements . . . . .	99
<b>4</b>	<b>Stochastic Analysis in Infinite Dimensions</b> . . . . .	<b>101</b>
4.1	Infinite Dimensional Wiener Processes . . . . .	101
4.1.1	Revisiting some Known Two-Parameter Processes . . . . .	101
4.1.2	Banach Space Valued Wiener Process . . . . .	103
4.1.3	Sample Path Regularity . . . . .	103
4.1.4	Absolute Continuity Issues . . . . .	104
4.1.5	Series Expansions . . . . .	105
4.2	Stochastic Integral and Itô Processes . . . . .	106
4.2.1	The Case of $E^*$ - and $H^*$ -Valued Integrands . . . . .	108
4.2.2	The Case of Operator Valued Integrands . . . . .	110
4.2.3	Stochastic Convolutions . . . . .	112
4.3	Martingale Representation Theorems . . . . .	114
4.4	Girsanov's Theorem and Changes of Measures . . . . .	117
4.5	Infinite Dimensional Ornstein–Uhlenbeck Processes . . . . .	119
4.5.1	Finite Dimensional OU Processes . . . . .	119
4.5.2	Infinite Dimensional OU Processes . . . . .	123
4.5.3	The SDE Approach in Infinite Dimensions . . . . .	125
4.6	Stochastic Differential Equations . . . . .	129
	Notes & Complements . . . . .	132
<b>5</b>	<b>The Malliavin Calculus</b> . . . . .	<b>135</b>
5.1	The Malliavin Derivative . . . . .	135
5.1.1	Various Notions of Differentiability . . . . .	135
5.1.2	The Definition of the Malliavin Derivative . . . . .	138
5.2	The Chain Rule . . . . .	141
5.3	The Skorohod Integral . . . . .	142
5.4	The Clark–Ocone Formula . . . . .	145
5.4.1	Sobolev and Logarithmic Sobolev Inequalities . . . . .	146
5.5	Malliavin Derivatives and SDEs . . . . .	149
5.5.1	Random Operators . . . . .	150
5.5.2	A Useful Formula . . . . .	152
5.6	Applications in Numerical Finance . . . . .	153
5.6.1	Computation of the Delta . . . . .	153
5.6.2	Computation of Conditional Expectations . . . . .	155
	Notes & Complements . . . . .	157

---

**Part III Generalized Models for the Term Structure**

---

<b>6</b>	<b>General Models</b> . . . . .	163
6.1	Existence of a Bond Market . . . . .	163
6.2	The HJM Evolution Equation . . . . .	164
6.2.1	Function Spaces for Forward Curves . . . . .	164
6.3	The Abstract HJM Model . . . . .	168
6.3.1	Drift Condition and Absence of Arbitrage . . . . .	169
6.3.2	Long Rates Never Fall . . . . .	171
6.3.3	A Concrete Example . . . . .	173
6.4	Geometry of the Term Structure Dynamics . . . . .	175
6.4.1	The Consistency Problem . . . . .	176
6.4.2	Finite Dimensional Realizations . . . . .	177
6.5	Generalized Bond Portfolios . . . . .	182
6.5.1	Models of the Discounted Bond Price Curve . . . . .	183
6.5.2	Trading Strategies . . . . .	185
6.5.3	Uniqueness of Hedging Strategies . . . . .	187
6.5.4	Approximate Completeness of the Bond Market . . . . .	188
6.5.5	Hedging Strategies for Lipschitz Claims . . . . .	189
	Notes & Complements . . . . .	193
<b>7</b>	<b>Specific Models</b> . . . . .	195
7.1	Markovian HJM Models . . . . .	195
7.1.1	Gaussian Markov Models . . . . .	196
7.1.2	Assumptions on the State Space . . . . .	197
7.1.3	Invariant Measures for Gauss–Markov HJM Models . . . . .	198
7.1.4	Non-Uniqueness of the Invariant Measure . . . . .	200
7.1.5	Asymptotic Behavior . . . . .	201
7.1.6	The Short Rate is a Maximum on Average . . . . .	201
7.2	SPDEs and Term Structure Models . . . . .	203
7.2.1	The Deformation Process . . . . .	204
7.2.2	A Model of the Deformation Process . . . . .	205
7.2.3	Analysis of the SPDE . . . . .	206
7.2.4	Regularity of the Solutions . . . . .	208
7.3	Market Models . . . . .	210
7.3.1	The Forward Measure . . . . .	210
7.3.2	LIBOR Rates Revisited . . . . .	213
	Notes & Complements . . . . .	214
	<b>References</b> . . . . .	217
	<b>Notation Index</b> . . . . .	225
	<b>Author Index</b> . . . . .	227
	<b>Subject Index</b> . . . . .	231
