## Part I Transport Coefficients of Dilute Gases

---

<b>2</b>	<b>Boltzmann Equation for Dilute Monatomic Gases</b> .....	11
2.1	Boltzmann Equation and Boltzmann Entropy .....	12
2.2	Equilibrium Solution .....	14
2.3	Linear Transport Processes .....	16
	References .....	25
<b>3</b>	<b>Transport Processes in Monatomic Gases</b> .....	27
3.1	Diffusion Processes .....	27
3.2	Thermal Conduction .....	29
3.3	Viscous Phenomena .....	30
3.4	Nonlinear Transport Processes .....	31
3.4.1	Generalized Hydrodynamic Equations .....	32
3.4.2	Nonlinear Constitutive Equations .....	40
3.4.3	Nonlinear Transport Coefficients .....	41
3.5	Applications of Nonlinear Transport Coefficients .....	44
3.5.1	Non-Newtonian Flow in Rarefied Gases .....	45
3.5.2	Non-Poiseuille Flow in a Channel .....	47
3.5.3	Non-Poiseuille Flow in a Tube .....	48
3.5.4	Shock Wave Width in Dilute Gases .....	51
	References .....	53
<b>4</b>	<b>Boltzmann Equation for Dilute Polyatomic Gases</b> .....	55
4.1	Kinetic Equation for Polyatomic Gases .....	56

4.2	The H Theorem .....	59
4.3	Generalized Hydrodynamic Equations .....	61
4.3.1	Conservation Equations .....	63
4.3.2	Evolution Equations for Nonconserved Variables .....	64
4.4	Linear Transport Processes .....	69
4.5	Remarks .....	69
	References .....	70
<b>5</b>	<b>Transport Processes in Dilute Polyatomic Gases .....</b>	<b>71</b>
5.1	Ultrasonic Absorption in Rigid Diatomic Gases .....	71
5.1.1	Linearized Generalized Hydrodynamic Equations .....	72
5.1.2	Solution by Fourier Transform .....	74
5.1.3	Application of the Theory .....	77
5.2	Nonlinear Transport Coefficients and Shock Waves .....	82
5.2.1	Steady Generalized Hydrodynamic Equations .....	83
5.2.2	Differential Equations for Reduced Velocity and Temperature .....	87
5.2.3	Shock Wave Structure .....	87
	References .....	89

---

## Part II Transport Coefficients of Liquids

---

<b>6</b>	<b>Equation of State and Equilibrium</b>	
	<b>Properties of Liquids .....</b>	<b>93</b>
6.1	Virial Equation of State .....	94
6.2	Generic van der Waals Equation of State .....	94
6.2.1	A Potential with a Hard Core .....	95
6.2.2	A Square-Well Potential .....	97
6.3	Free Volume .....	100
6.4	Temperature and Density Dependence of $A$ and $B$ .....	101
6.5	Model Canonical Equation of State .....	104
6.5.1	Quadratic Model .....	107
6.5.2	Conclusion on the Canonical Form .....	111
6.6	Integral Equations for Pair Correlation Functions .....	112
6.6.1	Ornstein–Zernike Equation .....	112
6.6.2	Thermodynamic Consistency .....	114
6.6.3	Wiener–Hopf Method .....	117
6.6.4	Gauge Function .....	127
6.7	Equation for Inverse Correlation Length .....	129
6.8	Application to Hard Sphere Fluids .....	130
6.8.1	Integro-Differential Equations for Hard Sphere Fluids .....	130
6.8.2	Differential Equation for Pressure .....	131
6.8.3	Pair Correlation Function .....	132

6.8.4	A Perturbation Solution Method .....	133
6.8.5	Numerical Results for the Pair Correlation Function .....	137
6.8.6	The Laguerre Transform Method .....	139
6.9	Concluding Remarks .....	145
	References .....	146
<b>7</b>	<b>Generalized Boltzmann Equation</b> .....	<b>149</b>
7.1	Grand Ensemble and Kinetic Equation .....	150
7.2	Conservation Laws .....	155
7.3	Constitutive Equations .....	158
7.4	Generalized Hydrodynamics .....	164
7.5	Linear Transport Coefficients .....	167
7.5.1	Shear Viscosity .....	168
7.5.2	Bulk Viscosity .....	168
7.5.3	Thermal Conductivity .....	169
7.6	Formal Consideration of the Collision Bracket Integrals .....	169
7.7	A Monte Carlo Method for the Stress Tensor .....	172
	References .....	176
<b>8</b>	<b>Generalized Boltzmann Equation for Polyatomic Liquids</b> .....	<b>179</b>
8.1	Notational Preliminary .....	179
8.2	Evolution Equations for Macroscopic Variables .....	185
8.2.1	Macroscopic Variables .....	186
8.2.2	Conservation Laws .....	189
8.2.3	Evolution Equations for Nonconserved Variables .....	190
8.3	Kinetic Theory of Reacting Fluids .....	193
8.4	Kinetic Equation for Reacting Fluids .....	195
8.5	Collision Operators .....	198
8.5.1	Nonreactive Collision Operator .....	198
8.5.2	Reactive Collision Operators .....	198
8.6	Density Evolution Equations and Chemical Kinetics .....	199
8.6.1	Reaction Rate Equations .....	200
8.6.2	Evolution Equations for Diffusion Fluxes .....	201
8.6.3	Pair Density Evolution Equations .....	202
8.6.4	Rate Coefficients for Diffusion-Limited Reactions .....	203
8.6.5	Transition State Theory .....	205
8.7	Scattering Theory and Rate Coefficients .....	207
8.8	The R Matrix Theory of Collision .....	209
8.8.1	Internal Wave Functions .....	210
8.8.2	The R and S Matrices .....	212
8.8.3	Multilevel Formula .....	213
8.9	Collision Complexes and Rate Coefficient .....	214
8.10	Characterization of Collision Complexes .....	216
