1	Introduction	1
----------	---------------------------	----------

Part I Basics

2	Electromagnetic Fields	5
2.1	Maxwell's Equations	5
2.2	Material Equations	6
2.3	Boundary Conditions	8
2.4	Waves in Free Space	9
2.5	Polarization	11
2.6	Waves in Lossy Media	12
2.7	Energy Conservation	14
2.8	Electromagnetic Potentials	15
2.9	Green's Function	17
2.10	Waves on Transmission Lines	18
3	Radiofrequency and Antenna Theory	23
3.1	Scattering Parameters	23
3.2	Resonators and Antennas	27
3.3	Antenna Parameters	28
3.3.1	Antenna Radiation	28
3.3.2	Nearfield and Farfield	30
3.3.3	Radiation Pattern	31
3.3.4	Directivity, Efficiency and Gain	33
3.3.5	Matching and Bandwidth	35
3.4	Antenna Arrays	37
3.4.1	Farfield Approximation	37
3.4.2	Beam Steering	40

Part II Numerical Methods

4	Numerical Methods	45
4.1	General Aspects of Numerical Modeling Software	46
4.2	Finite-Difference Time-Domain (FDTD)	48
4.2.1	Fundamentals	48
4.2.2	Discretization in Space and Time	49
4.2.3	Numerical Stability and Dispersion	54
4.2.4	Boundary Conditions	56
4.2.5	Excitations	56
4.2.6	Circuit Parameters and Frequency-Domain Quantities	57
4.2.7	Nearfield-to-Farfield Transformation	60
4.2.8	Prediction Filter for Structures with High Q Value	63
4.3	Method of Moments (MoM)	66
4.3.1	Fundamentals	66
4.3.2	Thin Wire Approximation	68
4.3.3	Metal Surfaces	70
4.3.4	Treatment of Dielectric Material	71
4.3.5	Method of Moments for Layered Structures	71
4.4	Finite-Element Method (FEM)	73
4.4.1	General Remarks	73
4.4.2	Variational Expression	73
4.4.3	Finite Elements	73
4.4.4	Shape Functions	74
4.4.5	Element Matrix	76
4.4.6	Matrix Compilation	76
4.4.7	Linear Systems	77
4.5	Other Methods	78
5	Creating an Efficient Simulation Model	81
5.1	General Structure of Numerical Modeling Software	81
5.1.1	Preprocessor	82
5.1.2	Solver	83
5.1.3	Postprocessor	83
5.2	Geometry	84
5.2.1	Interactive Construction via Graphical User Interface (GUI)	84
5.2.2	Object Definition via Macro Language	86
5.2.3	Import of CAD (Computer Aided Design) Data	86
5.2.4	Summary	88
5.3	Material Properties	89
5.4	Ports	90
5.4.1	Waveguide Ports	91
5.4.2	Plane Wave Excitation	91

5.4.3	Lumped Ports	93
5.5	Lumped Circuit Elements	94
5.6	Boundary Conditions	94
5.6.1	Electric and Magnetic Walls	94
5.6.2	Absorbing Boundary Conditions.....	96
5.7	Meshing	97
5.7.1	Overview	97
5.8	Simulation Control Parameters	99
5.9	Estimation of Required Resources	100
5.10	Postprocessing	101
5.11	Selection of Numerical Method	102
5.12	Summary	103
6	Canonical Examples	107
6.1	Introduction	107
6.2	Coaxial Line Discontinuity.....	108
6.2.1	Theoretical Background	108
6.2.2	Analysis with FDTD Software	109
6.2.3	FDTD Convergence Study.....	115
6.2.4	Analysis with FEM Software	117
6.2.5	FEM Convergence Study	120
6.3	Coaxial Line Transition with Quarter Wavelength Transformer	123
6.3.1	Theoretical Background	123
6.3.2	Analysis with FDTD Software	124
6.3.3	Analysis with FEM Software	126
6.4	Microstrip Filter	128
6.4.1	Theoretical Background	128
6.4.2	Model Definition	130
6.4.3	Analysis with FDTD Software	131
6.4.4	Analysis with FEM Software	135
6.4.5	Analysis with MoM Software	137
6.5	Feedpoint Impedance of a Dipole Antenna	139
6.5.1	MoM Model Definition	139
6.5.2	MoM Convergence Study of Input Impedance and Resonance Frequency	142
6.5.3	Transmission Between Distant Antennas	143
6.5.4	Analysis with FDTD.....	144
6.5.5	Analysis with FEM Software	146
6.6	Aperture Antenna	148
6.6.1	Rectangular Waveguide	148
6.6.2	Analysis with FDTD Software	149
6.6.3	Analysis with FEM Software	155
6.7	Planar Inverted-F Antenna (PIFA)	157
6.7.1	General Remarks	157
6.7.2	Model Definition and FDTD-Based Antenna Design ...	158

6.7.3	Analysis with FEM Software	166
6.8	Induced Current Density in Lossy Media	171
6.8.1	Model Definition	172
6.8.2	Convergence Study	174
6.9	Microstrip Gap in Resonant Cavity	177
6.9.1	Model Definition	177
6.9.2	Analysis with FEM	178
6.9.3	Analysis with FDTD	181
6.9.4	Analysis with MoM	183
6.9.5	FDTD Model with Lumped Port Excitation	185
6.9.6	FDTD Model with Coaxial Port Excitation	185

Part III Applications

7	Applications in Wireless Communications Systems	191
7.1	GPS Antenna with Feeding Network	191
7.1.1	Background and Design Considerations	191
7.1.2	Branchline Coupler Submodel	193
7.1.3	Square Patch Antenna Submodel	197
7.1.4	Combined Coupler and Antenna Model	200
7.2	Base Station Antenna for Cellular Networks	207
7.2.1	Introduction	207
7.2.2	Simple Model of a Base Station Antenna	208
7.2.3	Validation	211
7.2.4	Simple Base Station Antenna with Electrical Downtilt	213
7.2.5	Influence of Radome and Mounting Material	215
7.2.6	Influence of Wall Mounting	216
7.2.7	Influence of Vertical Rotation	218
7.2.8	Human Body in Front of Base Station Antenna	220
7.2.9	Conclusion	224
7.3	Integrated Multiband Antennas for Mobile Phones	225
7.3.1	Technical and Non-Technical Requirements	226
7.3.2	Antenna Concepts	227
7.3.3	Detailed Analysis of the Functional Principle of Mobile Phone Antennas	231
7.3.4	Interaction with the User	234
7.3.5	Midband Antenna Concepts	242
7.3.6	Summary	245
7.4	Ultra-Wideband Antenna Design	247
7.4.1	Introduction	247
7.4.2	UWB Antenna Element Design and Optimization	248
7.4.3	The Influence of a Specific Integration Scenario	253
7.4.4	Establishing an Interface Between Different Modeling Tools for the Entire System Analysis	256

7.4.5 Propagation Modeling and System Analysis	264
7.4.6 Summary	266
References	269
Index	273
