## From Prebiotic Chemistry to the Origin of Life on Earth

---

<b>Introduction</b> .....	27
---------------------------	----

### **1 A Rational Approach to the Origin of Life: From Amphiphilic Molecules to Protocells. Some Plausible Solutions, and Some Real Problems**

<i>Guy Ourisson, Yoichi Nakatani</i> .....	29
1.1 From Amphiphilic Molecules to “Protocells” by Understandable Processes. Self-Organisation and Self-Complexification .....	29

1.2	Water and Self-Organisation of Amphiphiles	30
1.2.1	The Structure of Liquid Water	30
1.2.2	The Structure of Amphiphile-water Mixtures	30
1.3	Properties Ensuing from the Self-organisation of Amphiphiles	33
1.3.1	Extraction and Orientation	33
1.3.2	Increased Concentration and Condensation	33
1.3.3	Vectorial Properties	34
1.3.4	Coating the Vesicles	35
1.3.5	Vesicles and Nucleic Acids; Vesicles as Protocells	36
1.4	The Nature of the Primitive Amphiphiles	37
1.4.1	The Modernity of N-Acyl Lipids	37
1.4.2	The Archæal Lipids and Their Synthesis	38
1.4.3	The Terpenoids as Universal Metabolites	41
1.5	Some Remaining Problems	41
1.5.1	The Problem of the Synthesis of Ingredients	41
1.5.2	The Problem of Local Concentration	42
1.5.3	The Problem of the Prevalence of Phosphates	42
1.5.4	The Problem of Phosphorylation by Phosphoric Anhydrides	43
1.5.5	The Problem of the C <sub>5</sub> Unit	44
1.5.6	The Problem of the Cytoskeleton	44
	References	44

## 2 Prebiotic Chemistry: Laboratory Experiments and Planetary Observation

	<i>François Raulin, Patrice Coll, Rafael Navarro-González</i>	49
2.1	Simulation Experiments and Photochemical Models	50
2.1.1	An Historical View of Miller's Experiment and the Development of a New Field: Prebiotic Chemistry	50
2.1.2	An Overview of Experimental and Theoretical Data	51
2.1.3	New Scenario for Prebiotic Chemistry	53
2.2	Elementary Prebiotic Chemistry in Aqueous Solution	54
2.2.1	Prebiotic Chemistry of HCN: Strecker Reaction or Oligomerization (see Box 2.1)	54
2.2.2	Prebiotic Chemistry of HCHO, Formose Reaction	57
2.2.3	Prebiotic Chemistry of Tholins	58
2.3	Application of These Laboratory Experimental Data to Space Studies	58
2.3.1	Telluric Planets	58
2.3.2	Giant Planets and Their Satellites	60
2.4	Conclusions	67
	References	68

### 3 Chirality and the Origin of Homochirality

<i>John Cronin, Jacques Reisse</i> .....	73
3.1 Chirality: Basic Concepts .....	73
3.2 Reactivity of Chiral Molecules .....	78
3.3 Pasteur and the Discovery of Molecular Chirality .....	79
3.4 Crystals and Crystallization .....	81
3.5 Homochirality and Life .....	82
3.6 The Why and When of Homochirality .....	84
3.7 Origin of Homochirality and Spontaneous Symmetry Breaking .....	86
3.8 Origin of Homochirality and Parity Violation .....	89
3.9 Origin of Homochirality and Photochemistry .....	91
3.10 Amplification of Enantiomeric Excesses .....	93
3.10.1 Introduction .....	93
3.10.2 Kinetic Resolution .....	93
3.10.3 Chiral Catalysis .....	95
3.10.4 Asymmetric Autocatalysis: Theoretical Models .....	95
3.10.5 Asymmetric Autocatalysis: Experimental Data .....	97
3.10.6 On the Possibility to Amplifying Enantiomeric Excesses due to Parity Violation .....	99
3.11 Exogenous Origin of Homochirality .....	101
3.12 Hypothesis and Summary .....	104
3.13 Homochirality Analyses in the Solar System and Beyond .....	107
References .....	108

### 4 Peptide Emergence, Evolution and Selection on the Primitive Earth. I. Convergent Formation of *N*-Carbamoyl Amino Acids Rather than Free $\alpha$ -Amino Acids?

<i>Auguste Commeyras, Laurent Boiteau, Odile Vandenaabeele-Trambouze, Franck Selsis</i> .....	117
4.1 Introduction .....	117
4.2 Organic Molecules on the Primitive Earth .....	118
4.3 Exogenous Amino Acids and Related Compounds .....	119
4.3.1 Exhaustive Survey of Exogenous Amino Acids .....	119
4.3.2 Formation Mechanisms of Exogenous Amino Acids .....	120
4.3.3 Other Meteoritic Compounds Closely Related to Amino Acids .....	125
4.3.4 Non-Racemic Exogenous $\alpha$ -Amino Acids .....	126
4.3.5 Exogenous Peptides .....	127
4.3.6 Conclusion .....	127
4.4 Endogenous Organic Matter .....	128
4.4.1 Endogenous $\alpha$ -Amino Acids .....	128

4.5	Formation Mechanisms of $\alpha$ -Amino Acids and <i>N</i> -Carbamoyl Amino Acids Via Strecker and Bücherer–Bergs reactions . . . . .	129
4.5.1	The Set of Reversible Reactions . . . . .	132
4.5.2	The Set of Irreversible Reactions . . . . .	133
4.5.3	Fate of Primary and Secondary Amines ( $R^3NH_2$ , $R^3R^4NH$ ) . .	135
4.5.4	Conclusion . . . . .	135
4.6	Prebiotic Formation of $\alpha$ -Amino Amides and Hydantoins Through Strecker and Bücherer–Bergs Reactions . . . . .	136
4.6.1	Formation of Exogenous $\alpha$ -Amino Amides and Hydantoins . .	136
4.6.2	Endogenous Formation of $\alpha$ -Amino Amides and Hydantoins .	138
4.7	Convergent Evolution Towards <i>N</i> -Carbamoyl Amino Acids under Prebiotic Conditions . . . . .	140
4.8	Conclusions . . . . .	141
	References . . . . .	142

## 5 Peptide Emergence, Evolution and Selection on the Primitive Earth. II. The *Primary Pump* Scenario

	<i>Auguste Commeyras, Laurent Boiteau, Odile Vandenabeele-Trambouze,</i> <i>Franck Selsis</i> . . . . .	147
5.1	From <i>N</i> -carbamoyl Amino Acids (CAA) to Peptides . . . . .	147
5.1.1	Introduction . . . . .	147
5.1.2	The Primary Pump . . . . .	149
5.2	Environmental Requirements . . . . .	151
5.2.1	Primitive Earth . . . . .	151
5.2.2	Primitive Atmosphere . . . . .	152
5.2.3	About the pH of Primitive Oceans . . . . .	156
5.3	Investigation of the Primary Pump . . . . .	157
5.3.1	Step-By-Step Experimental Investigation . . . . .	158
5.3.2	Integrated Experimental Approach: Chemoselectivity . . . . .	161
5.4	Energy . . . . .	163
5.5	Conclusions and Perspectives . . . . .	165
	References . . . . .	166

## 6 The RNA World: Hypotheses, Facts and Experimental Results

	<i>Marie-Christine Maurel, Anne-Lise Haenni</i> . . . . .	171
6.1	The Modern RNA World . . . . .	171
6.1.1	Where in the Living Cell is RNA Found? . . . . .	171
6.2	An RNA World at the Origin of Life? . . . . .	177
6.2.1	Facts . . . . .	178
6.2.2	Hypotheses . . . . .	178
6.2.3	But What do We Know about Primitive Replication? . . . . .	179
6.3	A Pre-RNA World . . . . .	181

6.3.1 Evolutive Usurpation ..... 181

6.3.2 Alternative Genetic Systems ..... 181

6.4 Optimizing the Functional Capacities  
of Ribonucleic Acids ..... 183

6.4.1 Coenzymes and Modified Nucleosides ..... 183

6.4.2 The Case of Adenine ..... 185

6.4.3 Mimicking Darwinian Evolution ..... 186

6.4.4 Other Perspectives ..... 189

6.5 Conclusion ..... 190

References ..... 190

**7 Looking for the Most ‘Primitive’ Life Forms:  
Pitfalls and Progresses**

*Simonetta Gribaldo, Patrick Forterre* ..... 195

7.1 Simpler Doesn’t Necessarily Mean Older! ..... 196

7.2 Hyperthermophiles are not Primitives, but are Remnants from  
Thermophilic Organisms ..... 197

7.2.1 Hyperthermophiles and the Hypothesis of a Hot Origin of Life 197

7.2.2 Hyperthermophiles are Complex Prokaryotes ..... 198

7.2.3 Origin of Hyperthermophily ..... 200

7.2.4 LUCA was Probably not a Hyperthermophile ..... 201

7.2.5 Temperature and the RNA World ..... 203

7.3 Comparative Genomics: a Novel Approach to Retrace Our Most  
Distant Past ..... 204

7.3.1 Simple or Complex LUCA? A RNA or a DNA Genome? .... 204

7.3.2 A Key Step: the Apparition of DNA ..... 206

7.3.3 Viruses: Essential Players in Evolution ..... 208

7.3.4 The Origin of the Nucleus: a Further Puzzle ..... 209

7.4 Conclusions and Perspectives ..... 211

7.4.1 More Data are Needed ..... 211

7.4.2 To not Forget Darwin! ..... 211

References ..... 212

**8 The Universal Tree of Life:  
From Simple to Complex or From Complex to Simple**

*Henner Brinkmann, Hervé Philippe* ..... 217

8.1 Principles of Tree-Reconstruction Methods ..... 217

8.2 The Universal Tree of Life According to Woese ..... 221

8.3 Reconstruction Artefacts ..... 224

8.3.1 Multiple Substitutions Generate Reconstruction Problems ... 224

8.3.2 Mutational Saturation Versus Resolving Power ..... 225

8.3.3 Compositional Bias ..... 228

8.3.4 Long-branch Attraction ..... 228

8.3.5 Heterotachy ..... 230

8.3.6 Rare Genomic Events as an Alternative Approach? ..... 232

### 1 Earth Structure and Plate Tectonics: Basic Knowledge

	<i>Hervé Martin</i> .....	283
1.1	Earth Internal Structure .....	283
1.1.1	Inner Core (from 6378 to 5155 km Depth) .....	283
1.1.2	Outer Core (from 5155 to 2891 km Depth) .....	284
1.1.3	Lower Mantle (from 2891 to 670 km Depth) .....	284
1.1.4	Upper Mantle (from 670 km to 7 km Depth Under Oceans and 30 km Depth Under Continents) .....	285
1.1.5	Crusts (from 7 km Depth Under Oceans and 30 km Depth Under Continents to Surface) .....	285
1.1.6	Hydrosphere .....	286
1.1.7	Atmosphere .....	286

1.1.8	Lithosphere and Asthenosphere.....	286
1.2	Plate Tectonics.....	287
1.2.1	Plates on the Surface of the Earth.....	287
1.2.2	Margin Definitions.....	287
1.2.3	Divergent Margin.....	288
1.2.4	Convergent Margin.....	291
1.2.5	Hot Spots.....	293
1.2.6	Wilson Cycle.....	294
1.2.7	Energy for Plate Tectonics.....	295
References	.....	295
