<b>1</b>	<b>Terminology, the Standard Human, and Scaling</b> .....	1
1.1	Anatomical Terminology .....	1
1.2	Motion in the Human Machine .....	3
1.3	The Standard Human .....	16
1.4	Scaling Relationships .....	22
1.4.1	Allometric Rules .....	22
1.4.2	Scaling in the Senses .....	25
1.5	Summary .....	26
	Problems .....	26
<b>2</b>	<b>Statics of the Body</b> .....	37
2.1	Review of Forces, Torques, and Equilibrium .....	37
2.2	Statics: Motion in One Plane and Levers .....	40
2.3	Statics in the Body .....	43
2.3.1	The Lower Arm .....	44
2.3.2	Hip Problems .....	49
2.3.3	Statics of Other Synovial Joints .....	59
2.3.4	Lower Back Problems .....	66
2.3.5	Three-Force Rule .....	76
2.3.6	Multisegment Modeling .....	77
2.4	The Sense of Touch .....	79
2.5	Diversion into the Units of Force and Pressure .....	80
2.5.1	Force .....	80
2.5.2	Pressure .....	81
2.6	Summary .....	82
	Problems .....	83
<b>3</b>	<b>Motion</b> .....	93
3.1	Kinematics and Musculature .....	93
3.2	Standing .....	95
3.2.1	Stability .....	95
3.2.2	Forces on the Feet .....	100

3.3	Walking	102
3.3.1	Kinematics	102
3.3.2	Muscular Action	104
3.3.3	Friction	105
3.3.4	Energetics	109
3.3.5	Review of Harmonic Motion, Pendulums, and Moments of Inertia	113
3.3.6	Ballistic (or Pendulum) Model of Walking	118
3.3.7	Inverted Pendulum Model	120
3.4	Running	121
3.4.1	Kinematics	122
3.4.2	Muscular Action	124
3.4.3	Energetics	126
3.4.4	Bouncing Ball/Pogo Stick Model	131
3.5	Jumping	133
3.5.1	Vertical Jump	133
3.5.2	Pole Vault	137
3.6	Throwing a Ball	138
3.6.1	Throwing a Spinning Ball	148
3.6.2	Power Generated During a Throw	150
3.7	Other Types of Motion	151
3.8	Collisions of the Human Body	153
3.8.1	Kinematics of a Collision	154
3.8.2	Consequences of Collisions	157
3.8.3	Hitting Balls	166
3.8.4	Running	169
3.8.5	Jumping	170
3.9	Sustained Acceleration	170
3.10	Physics of Sports	172
3.11	Summary	172
	Problems	172
<b>4</b>	<b>Mechanical Properties of the Body</b>	<b>193</b>
4.1	Material Components of the Body	195
4.1.1	Bone	197
4.1.2	Ligaments and Tendons	198
4.1.3	Cartilage	199
4.2	Elastic Properties	201
4.2.1	Basic Stress–Strain Relationships	201
4.2.2	Other Stress–Strain Relations	203
4.2.3	Bone Shortening	205
4.2.4	Energy Storage in Elastic Media	205
4.3	Time-Independent Deviations in Hookean Materials	208
4.3.1	Non-Hookean Materials	217

4.4	Static Equilibrium of Deformable Bodies (Advanced Topic) . . .	218
4.4.1	Bending of a Beam (or Bone) . . . . .	224
4.5	Time-Dependent Deviations from Elastic Behavior:	
	Viscoelasticity . . . . .	228
4.5.1	Perfect Spring . . . . .	233
4.5.2	Perfect Dashpot . . . . .	235
4.5.3	Simple Viscoelastic Models . . . . .	236
4.6	Viscoelasticity in Bone . . . . .	242
4.7	Bone Fractures . . . . .	244
4.7.1	Modes of Sudden Breaking of Bones . . . . .	245
4.7.2	Stress Fractures (Advanced Topic) . . . . .	252
4.8	Common Sports Injuries . . . . .	256
4.9	Avoiding Fractures and Other Injuries:	
	Materials for Helmets . . . . .	259
4.10	Summary . . . . .	261
	Problems . . . . .	262
<b>5</b>	<b>Muscles</b> . . . . .	<b>271</b>
5.1	Skeletal Muscles in the Body . . . . .	271
5.1.1	Types of Muscle Activity . . . . .	275
5.2	The Structure of Muscles . . . . .	276
5.3	Passive Muscles . . . . .	281
5.4	Activating Muscles: Macroscopic View . . . . .	281
5.4.1	Mechanical Model of the Active State of Muscles . . . . .	284
5.5	The Effect of Exercise . . . . .	290
5.5.1	Muscle Fatigue . . . . .	291
5.6	Coordination of Muscles . . . . .	292
5.7	Active/Tetanzed Muscles: Microscopic View . . . . .	292
5.7.1	Total Muscle Tension . . . . .	294
5.7.2	Everyday Proof of the Limited Range of Useful Muscle Length . . . . .	296
5.8	Hill Force–Velocity Curve . . . . .	298
5.9	The Sliding Filament Model: Nanoscopic View . . . . .	305
5.10	Summary . . . . .	310
	Problems . . . . .	310
<b>6</b>	<b>Metabolism: Energy, Heat, Work, and Power of the Body</b> . . . . .	<b>319</b>
6.1	Conservation of Energy and Heat Flow . . . . .	319
6.2	Energy Content of Body Fuel . . . . .	322
6.2.1	Metabolizable Energy and Energy Storage . . . . .	325
6.3	Energy Storage Molecules . . . . .	329
6.3.1	How ATP is Produced and Used as an Energy Source . . . . .	329

6.3.2	How ATP is Actually Used by the Body . . . . .	331
6.4	Metabolic Rates . . . . .	338
6.4.1	Basal Metabolic Rate . . . . .	338
6.4.2	Metabolic Rates during Common Activities . . . . .	344
6.4.3	Weight Gain and Loss . . . . .	358
6.5	Loss of Body Heat . . . . .	361
6.5.1	Modes of Heat Loss . . . . .	361
6.6	Body Temperature . . . . .	377
6.7	Summary . . . . .	384
	Problems . . . . .	384
<b>7</b>	<b>Fluid Pressure, Fluid Flow in the Body, and Motion in Fluids</b> . . . . .	<b>405</b>
7.1	Characteristic Pressures in the Body . . . . .	405
7.1.1	Definition and Units . . . . .	405
7.1.2	Measuring Pressure . . . . .	407
7.2	Basic Physics of Pressure and Flow of Fluids . . . . .	408
7.2.1	Law of Laplace . . . . .	409
7.2.2	Fluids in Motion . . . . .	411
7.2.3	Equation of Continuity . . . . .	413
7.2.4	Bernoulli's Equation . . . . .	413
7.2.5	Interactions among the Flow Parameters . . . . .	415
7.2.6	Viscous Flow and Poiseuille's Law . . . . .	415
7.3	Diffusion (Advanced Topic) . . . . .	426
7.4	Pressure and Flow in the Body . . . . .	428
7.5	Motion of Humans in Fluids . . . . .	431
7.5.1	Swimming . . . . .	431
7.5.2	Human Flight . . . . .	434
7.6	Summary . . . . .	436
	Problems . . . . .	436
<b>8</b>	<b>Cardiovascular System</b> . . . . .	<b>443</b>
8.1	Overview of the Circulatory System and Cardiac Cycle . . . . .	443
8.1.1	Circulation . . . . .	443
8.1.2	Cardiac Cycle . . . . .	446
8.1.3	Valves . . . . .	452
8.2	Physics of the Circulation System . . . . .	454
8.2.1	Properties of Blood . . . . .	454
8.2.2	Blood Pressure and Flow in Vessels . . . . .	455
8.2.3	Capillaries and Osmotic Pressure . . . . .	470
8.2.4	Blood Flow Rates and Speeds . . . . .	473
8.2.5	Consequences of Clogged Arteries . . . . .	482
8.2.6	Work Done by the Heart and the Metabolic Needs of the Heart . . . . .	485
8.3	Strokes and Aneurysms . . . . .	487

8.3.1	Arterial Bifurcations and Saccular Aneurysms.....	491
8.3.2	Stenosis and Ischemic Strokes .....	494
8.3.3	Equation of Motion of Arteries and Aneurysms during Pulsatile Flow (Advanced Topic) .....	495
8.4	Modeling the Circulatory System and the Heart .....	497
8.4.1	Model of the Heart .....	498
8.4.2	Model of the Overall Flow in the Circulatory System .....	501
8.4.3	The Arterial Pulse.....	504
8.4.4	Windkessel Model .....	507
8.4.5	Modeling the Malfunctioning Heart .....	509
8.5	Summary.....	511
	Problems .....	511
<b>9</b>	<b>Lungs and Breathing .....</b>	<b>525</b>
9.1	Structure of the Lungs .....	526
9.2	The Physics of the Alveoli .....	531
9.3	Physics of Breathing .....	534
9.4	Volume of the Lungs .....	537
9.5	Breathing Under Usual and Unusual Conditions .....	539
9.5.1	Flow of Air During Breathing .....	539
9.5.2	Mechanical Model of Breathing and Model Parameters .....	541
9.5.3	Inspiration/Expiration Cycle.....	541
9.5.4	Breathing with a Diseased Lung.....	543
9.5.5	Breathing at Higher Elevations.....	546
9.6	Work Needed to Breathe .....	547
9.7	Summary.....	548
	Problems .....	548
<b>10</b>	<b>Sound, Speech, and Hearing .....</b>	<b>555</b>
10.1	The Physics of Sound Waves .....	555
10.1.1	The Speed and Properties of Sound Waves.....	557
10.1.2	Intensity of Sound Waves.....	558
10.1.3	What Happens when Sound Travels from One Medium to Another?.....	565
10.1.4	Resonant Cavities .....	567
10.2	Speech Production.....	571
10.2.1	Types of Sounds .....	571
10.2.2	Systems in Speech Production .....	575
10.2.3	Parameters of the Human Voice .....	589
10.2.4	The Energetics of Speaking .....	591
10.3	Hearing .....	591
10.3.1	Auditory Sensitivity .....	593
10.3.2	Connections to Hearing Perception .....	611

10.4 Other Vibrations in the Body . . . . .	616
10.4.1 Cardiac and Other Sources of Sounds . . . . .	616
10.5 Summary . . . . .	619
Problems . . . . .	619
<b>11 Light, Eyes, and Vision . . . . .</b>	<b>629</b>
11.1 Structure of the Eye . . . . .	629
11.2 Focusing and Imaging with Lenses . . . . .	636
11.2.1 Image Formation . . . . .	636
11.2.2 Scientific Basis for Imaging . . . . .	638
11.2.3 Combinations of Lenses or Refractive Surfaces . . . . .	643
11.3 Imaging and Detection by the Eye . . . . .	650
11.3.1 Transmission of Light in the Eye . . . . .	650
11.3.2 The Eye as a Compound Lens . . . . .	653
11.3.3 Accommodation . . . . .	658
11.3.4 Field of View and Binocular Vision . . . . .	660
11.3.5 Adjustments of Light Levels . . . . .	660
11.3.6 Limitations to Visual Acuity . . . . .	663
11.3.7 Imperfect Human Vision . . . . .	673
11.3.8 Correction of Vision by Eyeglasses, Contact Lenses, and Other Means . . . . .	677
11.4 Types of Vision Impairment . . . . .	686
11.5 Connections to Visual Perception . . . . .	688
11.6 Vision in Other Animals . . . . .	695
11.7 Summary . . . . .	698
Problems . . . . .	699
<b>12 Electrical and Magnetic Properties . . . . .</b>	<b>713</b>
12.1 Review of Electrical Properties . . . . .	714
12.2 Electrical Properties of Body Tissues . . . . .	718
12.2.1 Electrical Conduction through Blood and Tissues . . . . .	718
12.3 Nerve Conduction . . . . .	720
12.3.1 Cell Membranes and Ion Distributions . . . . .	722
12.3.2 Types of Cell Membrane Excitations . . . . .	730
12.3.3 Model of Electrical Conduction along an Axon . . . . .	731
12.4 Ion Channels, Hair Cells, Balance, Taste, and Smell . . . . .	743
12.5 Electrical Properties of the Heart . . . . .	746
12.6 Electrical Signals in the Brain . . . . .	755
12.7 Effects of Electric Shock . . . . .	756
12.8 Magnetic Properties . . . . .	757
12.8.1 Magnetic Field from an Axon . . . . .	757
12.8.2 Magnetic Sense . . . . .	758
12.9 Electromagnetic Waves . . . . .	759
12.10 Summary . . . . .	759
Problems . . . . .	760

<b>13 Feedback and Control</b> .....	767
13.1 Basics of Feedback and Control .....	768
13.1.1 Control Theory (Advanced Topic) .....	770
13.2 Regulation of the Body .....	771
13.2.1 Regulation of Temperature .....	771
13.2.2 Control of Blood Pressure .....	777
13.2.3 Regulation During Exercise .....	778
13.3 Summary .....	779
Problems .....	779
<b>Appendix A Symbols and Units</b> .....	781
<b>Appendix B Locator of Major Anatomical and Anthropometric Information</b> .....	787
<b>Appendix C Differential Equations</b> .....	789
C.1 Simple First- and Second-Order Differential Equations .....	789
C.2 Exponential Decay and Drag .....	791
C.3 Harmonic Oscillator .....	793
C.4 Partial Differential Equations .....	795
<b>Appendix D Similar Model Systems</b> .....	799
D.1 Distributed vs. Lumped Models: Electrical Analogs of Blood Flow (Advanced Topic) .....	802
<b>Appendix E Biophysics of the Human Body</b> .....	805
<b>Solutions</b> .....	807
<b>References</b> .....	815
<b>Index</b> .....	845
