1 Mechanical Properties of Bacterial Exopolymeric Adhesives and their Commercial Development	
ANTHONY P. HAAG	1
1.1 Introduction	1
1.2 Adhesive Development	4
1.2.1 Mechanical Testing of Adhesive Bonds	4
1.2.2 Bacterial Exopolymer Adhesives	5
1.2.3 Related Polysaccharide-based Adhesives	15
1.3 Outlook	17
References	18
2 The Molecular Genetics of Bioadhesion and Biofilm Formation	
PAOLO LANDINI, GREGORY JUBELIN, AND CORINNE DOREL-FLAMANT	21
2.1 Biofilm Formation and its Regulation	21
2.1.1 Environmental Factors Leading to Biofilm Formation	22
2.1.2 Quorum Sensing	23
2.1.3 Global Regulators	24
2.2 A Case of Complex Regulatory Control: The Curli Factors (Thin Aggregative Fimbriae) of Enterobacteria	26
2.2.1 Curli Fibers: A Major Determinant for Biofilm Formation in Enterobacteria	26
2.2.2 Conditions for the Expression of Curli	28
2.2.3 Regulation by Osmolarity	30
2.2.4 Regulation According to the Bacterial Growth Phase	31
2.2.5 Thermoregulation	31
2.2.6 Regulation as a Result of Oxygen Concentration	32
2.2.7 Other Regulatory Systems	33
2.3 GGDEF and EAL Regulatory Proteins: Regulation of Exopolysaccharide Biosynthesis at the Enzyme Level	33
2.3.1 The GGDEF-EAL Protein Family	33
References	35
3 Adhesion and Adhesives of Fungi and Oomycetes	
LYNN EPSTEIN AND RALPH L. NICHOLSON	41
3.1 Introduction	41
3.2 Prevalence and Importance of Adhesion in Fungi and Oomycetes	41

3.2.1	Adhesion as Part of Many Stages of Morphogenesis in Many Fungi	42
3.2.2	Functions of Adhesion	43
3.2.3	Selected Examples	44
3.3	Challenges in Identifying Adhesives in Fungi	45
3.3.1	Genetic 'Knockout' and 'Knockin' Strategies	45
3.3.2	Biochemical Strategies	47
3.4	Fungal and Oomycete Glues	47
3.4.1	Features	47
3.4.2	Composition of Glues	48
3.4.3	Secretion and Crosslinking, with a Focus on Transglutaminases	49
3.4.4	Cell-surface Macromolecules with Apparent Adhesive Properties	49
3.5	Fungal Adhesins	55
3.6	Conclusions	56
	References	57
4	The <i>Ulva</i> Spore Adhesive System	
	JAMES A. CALLOW AND MAUREEN E. CALLOW	63
4.1	Introduction	63
4.2	Cell Biological and Biochemical Aspects	64
4.2.1	The 'Adhesive Apparatus'	64
4.2.2	Use of Monoclonal Antibodies to Identify the Contents of Adhesive Vesicles	66
4.2.3	Biochemical Characteristics of the Adhesive Antigens	68
4.2.4	Experiments on Cross-linking	68
4.2.5	Molecular Aspects	69
4.3	Physical and Mechanical Properties of the Adhesive	69
4.3.1	Imaging the Adhesive by ESEM	69
4.3.2	The Influence of Surface Properties on Adhesion and Adhesive Spreading	70
4.3.3	Nanomechanical and Viscoelastic Properties of the Spore Adhesive	72
4.3.4	Adhesive Strength of the Whole Spore System	74
4.4	Conclusions and Further Perspectives	74
	References	76
5	Diatom Adhesives: Molecular and Mechanical Properties	
	ANTHONY CHIOVITTI, TONY M. DUGDALE, AND RICHARD WETHERBEE	79
5.1	Diatoms and Adhesion	79
5.1.1	Diatom Morphology	79
5.1.2	Significance of Diatom Adhesion	79
5.1.3	Diatom Adhesion Strategies	81
5.1.4	General Composition of Diatom Mucilages	81
5.2	Adhesion and Gliding of Raphid Diatoms	82
5.2.1	Adhesion and Gliding Behaviour	82

Contents	xv
5.2.2 Mechanism of Raphid Diatom Adhesion and Gliding	83
5.2.3 Fine Structure of Raphid Diatom Mucilages	85
5.2.4 Nanomechanical Properties Determined by AFM	89
5.2.5 Molecular Composition	91
5.3 Sessile Adhesion	93
5.3.1 Physical Properties of Adhesive Pads with AFM	94
5.3.2 Molecular Composition and Chemical Properties of Stalks: <i>Achnanthes longipes</i>	96
5.4 Concluding Remarks	99
References	99
6 Phenolic-based Adhesives of Marine Brown Algae	
PHILIPPE POTIN AND CATHERINE LEBLANC	105
6.1 Introduction	105
6.2 Adhesion of Brown Algal Propagules	106
6.2.1 Settlement and Attachment of Brown Algal Spores	106
6.2.2 Adhesion of Furoid Zygotes	107
6.3 Secretion of Brown Algal Phenolics and Adhesion	109
6.4 Curing Mechanisms Involving Brown Algal Vanadium Peroxidases	111
6.4.1 Brown Algal Vanadium-dependent Haloperoxidase	112
6.4.2 <i>In vitro</i> Investigations of Haloperoxidase-mediated Oxidative Cross-linking	113
6.4.3 Requirement for an Efficient Oxidation Mechanism <i>In Situ</i>	115
6.5 Industrial Potential of Brown Algal Adhesives	116
6.6 Conclusions and Future Prospects	118

12 Properties, Principles, and Parameters of the Gecko Adhesive System	
KELLAR AUTUMN	225
12.1 Introduction	225
12.2 Adhesive Properties of Gecko Setae	227
12.2.1 Properties (1) Anisotropic Attachment and (2) High Adhesion Coefficient (μ')	227
12.2.2 Property (3) Low Detachment Force	229
12.2.3 Integration of Body and Leg Dynamics with Setal Attachment and Detachment	230
12.2.4 Molecular Mechanism of Gecko Adhesion	231
12.2.5 Property (4) Material Independent Adhesion	233
12.3 Anti-adhesive Properties of Gecko Setae	238
12.3.1 Properties (5) Self-cleaning and (6) Anti-self-adhesion	238
12.3.2 Property (7) Nonsticky Default State	239
12.4 Modeling Adhesive Nanostructures	241
12.4.1 Effective Modulus of a Setal Array	241
12.4.2 Rough Surface and Antimatting Conditions	244
12.5 Scaling	244
12.5.1 Scaling of Pad Area and Spatular Size	245
12.5.2 Scaling of Stress	245
12.6 Comparison of Conventional and Gecko Adhesives	246
12.7 Gecko-inspired Synthetic Adhesive Nanostructures	248
12.8 Future Directions in the Study of the Gecko Adhesive System	250
