1 Tomato

J. A. Labate, S. Grandillo, T. Fulton, S. Muños, A. L. Caicedo, I. Peralta, Y. Ji, R. T. Chetelat, J. W. Scott, M. J. Gonzalo, D. Francis, W. Yang, E. van der Knaap, A. M. Baldo, B. Smith-White, L. A. Mueller, J. P. Prince, N. E. Blanchard, D. B. Storey, M. R. Stevens, M. D. Robbins, J.-F. Wang, B. E. Liedl, M. A. O’Connell, J. R. Stommel, K. Aoki, Y. Iijima, A. J. Slade, S. R. Hurst, D. Loeffler, M. N. Steine, D. Vafeados, C. McGuire, C. Freeman, A. Amen, J. Goodstal, D. Facciotti, J. Van Eck, M. Causse	1
1.1 Introduction	1
1.2 Tomato Evolution and Taxonomy	2
1.2.1 Taxonomic Placement	2
1.2.2 Phylogenetic Relationships	3
1.2.3 Character Evolution and Genetic Diversity in Wild Tomatoes	6
1.3 Domestication, Modern Breeding, and Genetic Resources	7
1.3.1 Domestication	7
1.3.2 Dispersal	8
1.3.3 Economic Importance	9
1.3.4 Germplasm Collections	10
1.3.5 Germplasm Stocks	11
1.4 Marker Development: Leveraging Public Databases and Software Tools	15
1.4.1 Markers	15
1.4.2 SSR, Indel and SNP Discovery	15
1.4.3 Application and Mapping of Markers	18
1.4.4 PCR-based Linkage Map of <i>S. lycopersicum</i> cv. Rio Grande × <i>S. pimpinellifolium</i> LA1589 F ₂ Population	19
1.4.5 Future Approaches for Marker Development	20
1.5 Maps	20
1.5.1 Map Types	20
1.5.2 Maps Online	23
1.6 Comparative Mapping in the Solanaceae	28
1.6.1 Brief History of Comparative Mapping	28
1.6.2 Mapping in Solanaceous Plants	29
1.6.3 Markers and Orthology	30
1.6.4 Solanaceae Comparative Mapping: Future Prospects	33
1.7 Principles of QTL Mapping and Characterization	33
1.7.1 Principles of QTL Mapping	33
1.7.2 Stability of QTL Over Environment	34
1.7.3 QTL Characterization: Fine-mapping, Positional Cloning and Candidate Genes	34
1.8 Advanced-backcross and Introgression-line Breeding Strategies	34

1.8.1	Advanced Backcross QTL Analysis	35
1.8.2	ILs and “Exotic Libraries” for the Analysis of Quantitative Traits	36
1.8.3	QTL Fine-mapping and Cloning Using Introgression Lines	40
1.8.4	QTL Pyramiding	41
1.8.5	Advanced-backcross and Introgression-line Breeding: Future Prospects	42
1.9	Viral Resistance	42
1.9.1	<i>Alfamovirus</i>	45
1.9.2	<i>Begomoviruses</i>	45
1.9.3	<i>Cucumovirus</i>	46
1.9.4	<i>Curtovirus</i>	46
1.9.5	<i>Poleroviruses</i>	46
1.9.6	<i>Potexvirus</i>	46
1.9.7	<i>Potyvirus</i>	47
1.9.8	<i>Tobamovirus</i>	47
1.9.9	<i>Tospoviruses</i>	48
1.10	Bacterial Resistance	48
1.10.1	Bacterial Canker	48
1.10.2	Bacterial Speck	49
1.10.3	Bacterial Spot	49
1.10.4	Bacterial Wilt	49
1.11	Fungal Resistance	52
1.11.1	<i>Alternaria</i> Stem Canker	52
1.11.2	Anthracnose Ripe Rot	52
1.11.3	Blackmold	52
1.11.4	Corky Rot	52
1.11.5	Early Blight	54
1.11.6	<i>Fusarium</i> Crown and Root Rot	54
1.11.7	<i>Fusarium</i> Wilt	55
1.11.8	Gray Leafspot	55
1.11.9	Late Blight	55
1.11.10	Leaf Mold	55
1.11.11	Powdery Mildew	56
1.11.12	<i>Verticillium</i> Wilt	56
1.12	Insect Resistance	56
1.13	Drought or Water-Deficit Stress Resistance	57
1.13.1	Genetics and Drought Resistance Characteristics of Tomato Species	57
1.13.2	Drought-induced Changes in Gene Expression	58
1.13.3	Genetics and Salt Stress Resistance Characteristics in Tomato Species	59
1.13.4	Drought Responsive Genes	59
1.13.5	Genetic Engineering of Stress Resistance	60
1.13.6	Drought-Responsive H1 Histone	60
1.13.7	Drought or Water-Deficit Stress Resistance: Summary	61
1.14	Fruit Color and Nutritional Value	61
1.14.1	Micronutrients	62
1.14.2	Macronutrients: Carbohydrates, Insoluble Solids, and Lipids	69
1.14.3	Carbohydrates	70
1.14.4	Insoluble Solids	70

1.14.5	Lipids	71
1.15	Fruit Quality.....	72
1.15.1	Gene/QTL Mapping of Fruit Quality	72
1.15.2	Fruit Quality MAS.....	75
1.15.3	Molecular Characterization of QTLs for Quality	76
1.15.4	Fruit Quality: Conclusions	78
1.16	Metabolomics	79
1.16.1	Metabolomics Data Collection	79
1.16.2	Metabolomics Data Analysis	80
1.16.3	Metabolomics and Molecular Breeding	83
1.17	Bioinformatics	84
1.17.1	Tomato Analyzer (http://www.oardc.ohio-state.edu/vanderknaap/tomato_analyzer.htm)	84
1.17.2	TGRC (http://tgrc.ucdavis.edu)	84
1.17.3	GRIN (http://www.ars-grin.gov/)	84
1.17.4	TIGR (http://www.tigr.org)	84
1.17.5	MiBASE (http://www.kazusa.or.jp/jsol/microtom/indexj.html)	84
1.17.6	TED (http://ted.bti.cornell.edu)	85
1.17.7	SGN (http://sgn.cornell.edu)	85
1.18	International Tomato Genome Sequencing Project.....	86
1.19	Reverse Genetics and TILLING ¹	87
1.19.1	Reverse Genetic Strategies in Tomato	87
1.19.2	Creating a TILLING Population	88
1.19.3	High-throughput Screening and Mutation Discovery	89
1.19.4	Reverse Genetics and TILLING: Conclusions	92
1.20	Genetic Engineering	93
1.21	Tomato: Future Prospects	95
	References	95

2 Lettuce

D. W. Still	127	
2.1	Introduction.....	127
2.1.1	Economic Importance	128
2.1.2	Nutritional Value.....	128
2.1.3	Breeding Objectives	130
2.2	Genetic Maps: Intraspecific	131
2.3	Genetic Maps: Interspecific	131
2.4	QTL Mapping.....	134
2.5	Development of Genomic Resources	136
2.5.1	Sequence Information and EST Databases	136
2.5.2	Other Resources	136
2.5.3	Phenotypic Information	137
2.6	Future Prospects	138
	References	138

3 Radish

Y. Kaneko, C. Kimizuka-Takagi, S. W. Bang, Y. Matsuzawa	141	
3.1	Introduction.....	141
3.1.1	Origin and Distribution	141

¹ TILLING is a registered trademark of Arcadia Biosciences

3.1.2	Varietal Differentiation	142
3.1.3	Karyotype	142
3.1.4	Classical Genetic Analysis	143
3.1.5	Economic Importance	143
3.1.6	Breeding Objectives	143
3.1.7	Target Traits for Seed Production	145
3.2	Application of Molecular Markers	145
3.2.1	Evolution and Phylogenetic Relationship	146
3.2.2	Identification and Evaluation of Genotypes and their Purity ..	146
3.2.3	Confirmation of Hybridity	147
3.2.4	Chromosome Identification	148
3.2.5	Development of Markers for Self-Incompatibility and Cytoplasmic Male-Sterility Genes	148
3.3	Construction of Genetic Linkage Maps	149
3.4	Analysis of Quantitative Trait Loci	150
3.5	Marker-Assisted Breeding	151
3.6	Map-Based Cloning	154
3.7	Future Works	155
	References	155

4 Carrot

J. M. Bradeen, P. W. Simon	161	
4.1	Introduction	161
4.1.1	History of Cultivation	161
4.1.2	Carrot Biology	162
4.1.3	Taxonomy and Classification	163
4.1.4	Carrot Production and Consumer Quality	164
4.1.5	Carrot Breeding	167
4.2	Map Construction	168
4.2.1	Nuclear Linkage Maps	169
4.2.2	Evaluation of Marker Systems for Linkage Mapping	172
4.2.3	Organellar Physical Maps	172
4.3	Gene Mapping	173
4.4	Quantitative Trait Loci (QTL) Detected	174
4.5	Marker-Assisted Germplasm Maintenance and Breeding	175
4.6	Cloned Genes	178
4.7	Future of Molecular Breeding of Carrot	180
	References	181

5 *Brassica rapa*

M. Hirai, S. Matsumoto	185	
5.1	Introduction	185
5.1.1	Origin of <i>Brassica rapa</i>	185
5.1.2	Vegetable Crops of <i>B. rapa</i>	185
5.1.3	Conventional Breeding	186
5.2	Construction of Molecular Maps	186
5.3	Comparison of Crucifer Genomes	186
5.4	Genetic Analysis and Linkage Markers of Agricultural Traits	187
5.4.1	Clubroot	187
5.4.2	White Rust	187
5.4.3	Flowering and Physiological Characters	187

5.4.4 Morphological Traits 188
 5.5 Marker-Assisted Selection 188
 5.6 Genome Sequencing and Map-Based Cloning 189
 References 189

6 Beet

J. M. McGrath, M. Saccomani, P. Stevanato, E. Biancardi 191
 6.1 Introduction 191
 6.1.1 Brief History of the Crop 191
 6.1.2 Botanical Description 192
 6.1.3 Economic Importance 194
 6.1.4 Breeding Objectives 194
 6.1.5 Classical Breeding Achievements 195
 6.1.6 Classical Mapping Efforts 197
 6.2 Construction of Genetic Maps 198
 6.3 Gene Mapping and Marker-Assisted Selection 199
 6.4 Advanced Works 200
 6.5 Future Scope of Works 201
 References 202

7 Capsicums

I. Paran, A. Ben-Chaim, B.-C. Kang, M. Jahn 209
 7.1 Introduction 209
 7.1.1 Brief History of the Crop 209
 7.1.2 Taxonomy 209
 7.1.3 Morphology 209
 7.1.4 Karyotype, Ploidy Level and Genome Size 210
 7.1.5 Economic Importance 210
 7.1.6 Chemical Composition and Nutritional Value 210
 7.1.7 Breeding Objectives 211
 7.1.8 Classical Genetic Mapping 211
 7.1.9 Classical Breeding Achievements 211
 7.1.10 Limitations of Classical Endeavors and Utility
 of Molecular Mapping 212
 7.2 Construction of Genetic Maps 212
 7.2.1 Brief History of Mapping Efforts 212
 7.2.2 First Generation Maps 212
 7.2.3 Second Generation Maps 214
 7.2.4 Integration of Molecular Markers Based
 on Microsatellites (SSR) 214
 7.3 Gene Mapping 214
 7.3.1 Disease Resistance 214
 7.3.2 Fruit Traits 217
 7.4 QTLs Detected 218
 7.4.1 Disease Resistance 218
 7.4.2 Fruit Traits 220
 7.5 Marker-Assisted Breeding 221
 7.6 Map-Based Cloning 222
 7.7 Future Scope of Work 222
 References 223

8 Brassica oleracea

D. Babula, M. Kaczmarek, P. A. Ziółkowski, J. Sadoski	227
8.1 Introduction	227
8.1.1 Brief History of the Crop	227
8.1.2 Botanical Description	228
8.1.3 Economic Importance	230
8.1.4 Breeding Objectives	232
8.1.5 Classical Mapping Efforts	232
8.1.6 Classical Breeding Achievements	233
8.2 Construction of Genetic Maps	234
8.2.1 First Generation Maps	234
8.2.2 Second Generation Maps	237
8.2.3 Comparative Maps	242
8.3 Gene Mapping	246
8.4 <i>Brassica oleracea</i> Quantitative Trait Loci (QTL)	249
8.4.1 Resistance to <i>Plasmodiophora brassicae</i>	249
8.4.2 Transformation and Plant Regeneration	250
8.4.3 Developmental Characteristics	264
8.5 Marker-Assisted Breeding	268
8.6 Map-Based Cloning	271
8.7 Advanced Works	273
8.7.1 Comparative Physical Mapping in the <i>A. thaliana</i> – <i>B. oleracea</i> System	273
8.7.2 New Genomics Tools Developed for <i>B. oleracea</i> Research	275
8.8 Future Scope of Works: Comparative Assessment vis-a-vis Model Systems	277
References	278
9 Eggplant	
A. Frary, S. Doganlar, M. C. Daunay	287
9.1 Introduction	287
9.1.1 A Brief History of the Crop	287
9.1.2 Botanical Description	287
9.1.3 Economic Importance	288
9.1.4 Breeding Objectives	288
9.1.5 Classical Breeding Achievements	288
9.1.6 Classical Mapping Efforts	289
9.1.7 Limitations of Classical Endeavors and Utility of Molecular Mapping	289
9.2 Construction of Genetic Maps	290
9.2.1 A Brief History of Mapping in Eggplant	290
9.2.2 First Generation Maps	290
9.2.3 Comparative Maps	300
9.3 Gene and QTL Mapping	300
9.4 Marker-Assisted Breeding	309
9.5 Other Resources	310
9.6 Future Scope of Work	310
References	311
10 Cucurbits	
Y.-H. Wang, T. Joobeur, R. A. Dean, J. E. Staub	315
10.1 Introduction	315

10.1.1	Origin and Botany	315
10.1.2	Cucurbit Production	316
10.2	Genetic Mapping of Cucurbit Genomes	317
10.3	Genetic Mapping of Mendelian Traits	319
10.3.1	Fusarium Wilt Resistance	319
10.3.2	Mapping of Other Resistance Genes	320
10.3.3	Fruit/Flower Traits	320
10.4	Genetic Mapping of Quantitative Traits	320
10.5	Marker-Assisted Selection (MAS)	321
10.6	Map-Based Cloning	322
10.7	Cucurbit Genetic Engineering	322
10.8	Future Prospects	324
	References	324

11 Onion

J. McCallum	331	
11.1	Introduction	331
11.1.1	Taxonomy and History	331
11.1.2	Genetic Resources and Breeding	331
11.1.3	Cytology and Genome Structure	333
11.2	Molecular Markers and Other Genome Resources	333
11.2.1	Protein Markers	334
11.2.2	RAPD and AFLP Markers	334
11.2.3	Expressed Sequence, SSR and SNP Markers	334
11.2.4	BAC Resources	335
11.2.5	Genomic SSR Markers	335
11.3	Genetic Mapping	335
11.3.1	Inter- and Intraspecific Maps	335
11.3.2	Other Map and Marker Resources	335
11.4	Phenotypic Variation and Economic Traits	336
11.4.1	Adaptation and Bulb Quality	336
11.4.2	Carbohydrate Composition	336
11.4.3	Organosulfur Compounds	336
11.4.4	Pigmentation	337
11.4.5	Human Health Benefits	337
11.4.6	Pest and Disease Susceptibility	337
11.5	Genetic and QTL Analysis of Economic Traits	338
11.5.1	Bulb Pigmentation	338
11.5.2	Male-Fertility	338
11.5.3	Bulb Carbohydrate Composition	339
11.5.4	Bulb Pungency	341
11.6	Conclusion	342
	References	342

12 Garlic

P. F. Cavagnaro, C. R. Galmarini	349	
12.1	Introduction	349
12.1.1	Center of Origin, Spread and Domestication	349
12.1.2	Taxonomy	350
12.1.3	Habitat	351
12.1.4	Economic Importance	351

12.1.5	Morphology	352
12.1.6	Genome Size and Karyotype	353
12.1.7	Nutritional Composition and Nutraceutical Value	353
12.1.8	Organosulfur Constituents	354
12.2	Garlic Breeding and Construction of the First Genetic Maps	354
12.3	Mapping Gene-Specific Markers.....	358
12.4	BAC Libraries and Physical Mapping.....	359
12.5	Genome Organization in Garlic	359
12.6	Interspecific Hybrids	360
12.7	Genetic Transformation	360
12.8	Progress of Garlic Breeding and Future Scope of Works	360
	References	361
