# Table of Contents

## Alois Alzheimer

Concerning a unique disease of the cerebral cortex
*Alois Alzheimer* ................................................................. 3

The history of Alois Alzheimer's first case Auguste D.
*Maurer Konrad* ................................................................. 13

Alois Alzheimer and the beginnings of research into Alzheimer's disease
*Ralf Dahm* ................................................................. 37

Alois Alzheimer and the myth of the pioneer
*Yves Christen* ................................................................. 51

## The beginning of modern research

Alzheimer’s Disease at mid-Century (1927–1977) and a little more
*Robert D. Terry* ................................................................. 59

A chapter in the development on Alzheimer’s disease research
*Zaven S. Khachaturian* ............................................................. 63

## Anatomy & Neuropsychology

Anatomical changes underlying dementia in Alzheimer’s disease
*Bradley T. Hyman* ................................................................. 89

Staging of cortical neurofibrillary inclusions of the Alzheimer’s type
*Heiko Braak, Kelly Del Tredici* ............................................. 97

Of stains and brains: a brief account of how microscopic and clinical observations contributed to the understanding of Alzheimer’s disease
*Charles Duyckaerts, Jean-Jacques Hauw* .................................... 109

Presenile forms of Alzheimer’s disease in 2006
*Micel Poncet, Olivier Felician, Jean-François Pellissier* .................. 115
## Cholinergic Deficit

The cholinergic deficit in Alzheimer's disease  
*Peter Davies* .......................................................... 123

Acetylcholine in AD: Expectations meet reality  
*John H. Growdon* .................................................... 127

## Amyloid and Genetics

The Discovery of β Amyloid  
*Cai'ne W. Wong* .......................................................... 135

Pathways to the discovery of the neuronal origin and proteolytic biogenesis of Aβ amyloid of Alzheimer’s disease  
*Colin L Masters, Konrad Beyreuther* .................................. 143

The Amyloid Hypothesis: history and alternatives  
*John Hardy* .............................................................. 151

Segregation of a missense mutation in the amyloid β-protein precursor gene with familial Alzheimer's disease  
*Alison Goate* ............................................................. 157

From the amyloid β protein (A4) to isolation of the first Alzheimer’s disease gene: amyloid β (A4) precursor protein (APP)  
*Rudolph E. Tanzi* .......................................................... 163

Commentary on “Correlative memory deficits, Aβ elevation, and amyloid plaques in transgenic mice”  
*Karen Hsiao Ashe* .......................................................... 171

Vision for the future. Alzheimer's disease: pathogenesis, models and experimental therapeutics  
*Donald L. Price, Tong Li, Fiona M. Laird, Mohamed Farah, Alena V. Savonenko, Michael Lee, Juan Troncoso, Philip C. Wong* .................................................... 175

*PS1, PS2, and APP mutations that cause Alzheimer's disease increase Aβ42*  
*Steven G. Younkin* .......................................................... 189

Amyloid precursor protein, Alzheimer's disease, and Down's syndrome  
*Edward H. Koo* ............................................................ 197

Catabolism of amyloid β peptide and pathogenesis of sporadic Alzheimer’s disease: towards understanding the underlying mechanisms  
*Takaomi C. Saido* .......................................................... 201
Synaptic activity, amyloid-β and Alzheimer’s disease
John R. Cirrito, David M. Holtzman ........................................... 209

Molecular pathogenesis of Alzheimer’s disease in human peripheral cells:
platelets show it all!
Elena Marcello, Barbara Borroni, Fabrizio Gardoni, Alessandro Padovani,
Monica Di Luca ................................................................. 215

The neuronal origin hypothesis of cerebral amyloid angiopathy
Mathias Jucker ...................................................................... 221

A neuropathologist and Alzheimer genetics
Jean-François Foncin .............................................................. 225

Genetics, molecular biology, and animal modeling of Alzheimer’s disease
P.H. St George-Hyslop, P.E. Fraser, D. Westaway, J. McLaurin, E. Rogaeva,
G. Schmitt-Ulms, A. Tandon, H.T.J Mount, J. Robertson, C. Bergeron ........ 231

The genetic Alzheimer-frontotemporal dementia spectrum
Christine van Broeckhoven ...................................................... 237

Mutation of the Alzheimer’s disease amyloid gene in hereditary cerebral
hemorrhage, Dutch type. The role of amyloid in dementia and stroke
Blas Frangione, Jorge Ghiso ................................................... 243

Physiological generation of Amyloid β-peptide and its Consequences
for Alzheimer’s Disease Research
Christian Haass ................................................................. 249

Activation of α-secretase as an approach for treatment of Alzheimer’s disease
Falk Fahrenholz ................................................................. 255

Challenges to the enigma of γ-secretase and to Alzheimer’s disease
Takeshi Iwatsubo ................................................................. 261

Targeting γ-Secretase for Alzheimer’s Disease
Michael S. Wolfe ................................................................. 265

The Presenilin/gamma-secretase complex and its potential as a drug target
in Alzheimer’s Disease
Bart De Strooper ................................................................. 271

Identification of β-secretase
Martin Citron ................................................................. 277

ApoE

Apolipoprotein E and Alzheimer’s disease: A brief retrospective
Allen D. Roses ................................................................. 283

Imaging

Hippocampal imaging in the early diagnosis of AD, 1988 to 2006
*Mony J. de Leon* ................................................................. 385

Detecting Early-Stage Alzheimer’s Disease in MCI and PreMCI:
The value of informants
*John C. Morris, Martha Storandt* ........................................ 393

Imaging the pathology of Alzheimer’s disease:
Building on a century-Old blueprint
*William E. Klunk, Chester A. Mathis* .................................... 399

Therapeutical Perspectives

How do we test drugs?
*Leon J. Thal* ................................................................. 407

Inflammation and the lesions of Alzheimer’s disease
*Edith G. McGeer, Patrick L. McGeer* .................................. 413

Aβ immunotherapy prevents and Reverses Alzheimer’s disease neuropathology
*Dale Schenk, Dora Games, Peter Seubert* ............................ 419

Immunotherapy of Alzheimer’s disease
*Roger M. Nitsch, Christoph Hock* ...................................... 425

“Magic” bullets, shotguns or cocktails to treat or prevent Alzheimer’s disease?
*Todd E. Golde* ............................................................... 431

The seventh age of man: Solving senility
*Dennis J. Selkoe* .............................................................. 435

Forum and Network

Fondation Ipsen and Alzheimer’s disease: a 20-year relationship
*Jacqueline Mervaillie* ......................................................... 443

Alzheimer Research Forum:
A Knowledge Base and e-Community for AD Research
*June Kinoshita, Gabrielle Strobel* ....................................... 457

The Potamkin prize for research in Pick’s, Alzheimer’s and related diseases ...... 465
