|----------|--|-----------|
| 1 | Introduction | 1 |
| 2 | Variational problems with linear growth: the general setting | 13 |
| 2.1 | Construction of a solution for the dual problem which is of class $W_{2,loc}^1(\Omega; \mathbb{R}^{nN})$ | 14 |
| 2.1.1 | The dual problem | 14 |
| 2.1.2 | Regularization | 16 |
| 2.1.3 | $W_{2,loc}^1$ -regularity for the dual problem | 19 |
| 2.2 | A uniqueness theorem for the dual problem | 20 |
| 2.3 | Partial $C^{1,\alpha}$ - and $C^{0,\alpha}$ -regularity, respectively, for generalized minimizers and for the dual solution | 25 |
| 2.3.1 | Partial $C^{1,\alpha}$ -regularity of generalized minimizers | 26 |
| 2.3.2 | Partial $C^{0,\alpha}$ -regularity of the dual solution | 29 |
| 2.4 | Degenerate variational problems with linear growth | 32 |
| 2.4.1 | The duality relation for degenerate problems | 33 |
| 2.4.2 | Application: an intrinsic regularity theory for σ | 39 |
| 3 | Variational integrands with (s, μ, q)-growth | 41 |
| 3.1 | Existence in Orlicz-Sobolev spaces | 42 |
| 3.2 | The notion of (s, μ, q) -growth – examples | 44 |
| 3.3 | A priori gradient bounds and local $C^{1,\alpha}$ -estimates for scalar and structured vector-valued problems | 50 |
| 3.3.1 | Regularization | 52 |
| 3.3.2 | A priori L^q -estimates | 54 |
| 3.3.3 | Proof of Theorem 3.16 | 61 |
| 3.3.4 | Conclusion | 67 |
| 3.4 | Partial regularity in the general vectorial setting | 69 |
| 3.4.1 | Regularization | 69 |
| 3.4.2 | A Caccioppoli-type inequality | 70 |
| 3.4.3 | Blow-up | 72 |
| 3.4.3.1 | Blow-up and limit equation | 74 |
| 3.4.3.2 | An auxiliary proposition | 76 |
| 3.4.3.3 | Strong convergence | 83 |
| 3.4.3.4 | Conclusion | 86 |
| 3.4.4 | Iteration | 87 |

| | | |
|-----------------------------|--|------------|
| 3.5 | Comparison with some known results | 89 |
| 3.5.1 | The scalar case | 89 |
| 3.5.2 | The vectorial setting | 90 |
| 3.6 | Two-dimensional anisotropic variational problems | 91 |
| 4 | Variational problems with linear growth: the case of μ-elliptic integrands | 97 |
| 4.1 | The case $\mu < 1 + 2/n$ | 100 |
| 4.1.1 | Regularization | 101 |
| 4.1.2 | Some remarks on the dual problem | 101 |
| 4.1.3 | Proof of Theorem 4.4 | 103 |
| 4.2 | Bounded generalized solutions | 104 |
| 4.2.1 | Regularization | 108 |
| 4.2.2 | The limit case $\mu = 3$ | 111 |
| 4.2.2.1 | Higher local integrability | 111 |
| 4.2.2.2 | The independent variable | 113 |
| 4.2.3 | L^p -estimates in the case $\mu < 3$ | 116 |
| 4.2.4 | A priori gradient bounds | 118 |
| 4.3 | Two-dimensional problems | 122 |
| 4.3.1 | Higher local integrability in the limit case | 123 |
| 4.3.2 | The case $\mu < 3$ | 129 |
| 4.4 | A counterexample | 132 |
| 5 | Bounded solutions for convex variational problems with a wide range of anisotropy | 141 |
| 5.1 | Vector-valued problems | 142 |
| 5.2 | Scalar obstacle problems | 149 |
| 6 | Anisotropic linear/superlinear growth in the scalar case | 161 |
| A | Some remarks on relaxation | 173 |
| A.1 | The approach known from the minimal surface case | 174 |
| A.2 | The approach known from the theory of perfect plasticity | 176 |
| A.3 | Two uniqueness results | 181 |
| B | Some density results | 185 |
| B.1 | Approximations in BV | 185 |
| B.2 | A density result for $\mathcal{U} \cap L(c)$ | 191 |
| B.3 | Local comparison functions | 194 |
| C | Brief comments on steady states of generalized Newtonian fluids | 199 |
| D | Notation and conventions | 205 |
| References | | 207 |
| Index | | 215 |
