## Part I: Imaging Polarimetry

1	<b>Polarimetry: From Point-Source to Imaging Polarimeters</b>	3
1.1	Qualitative Demonstration of Linear Polarization in the Optical Environment	3
1.2	Elements of the Stokes and Mueller Formalism of Polarization	8
1.3	Polarimetry of Circularly Unpolarized Light by Means of Intensity Detectors	9
1.4	Point-Source, Scanning and Imaging Polarimetry	10
1.5	Sequential and Simultaneous Polarimetry	10
1.6	Colour Coding and Visualization of Polarization Patterns	11
1.7	Field of View of Imaging Polarimetry	11
1.8	Polarizational Cameras	12

## Part II: Polarization Patterns in Nature

2	<b>Space-Borne Measurement of Earthlight Polarization</b>	15
3	<b>Skylight Polarization</b>	18
3.1	The Importance of Skylight Polarization in Atmospheric Science	18
3.2	Celestial Polarization Measured by Video Polarimetry in the Tunisian Desert in the UV and Green Spectral Ranges	19

4	<b>Principal Neutral Points of Atmospheric Polarization</b> . . . . .	23
4.1	Video Polarimetry of the Arago Neutral Point of Skylight Polarization . . . . .	25
4.2	First Observation of the Fourth Principal Neutral Point . . . . .	27
5	<b>24-Hour Change of the Polarization Pattern of the Summer Sky North of the Arctic Circle</b> . . . . .	32
6	<b>Polarization Patterns of Cloudy Skies and Animal Orientation</b> . . . . .	36
6.1.	Polarization of Cloudy Skies . . . . .	36
6.2.	Continuation of the Clear-Sky Angle of Polarization Pattern Underneath Clouds . . . . .	37
6.3.	Proportion of the Celestial Polarization Pattern Useful for Compass Orientation Exemplified with Crickets . . . . .	38
7	<b>Ground-Based Full-Sky Imaging Polarimetric Cloud Detection</b> . . . . .	41
8	<b>Polarization Pattern of the Moonlit Clear Night Sky at Full Moon: Comparison of Moonlit and Sunlit Skies</b> . . . . .	47
9	<b>Imaging Polarimetry of the Rainbow</b> . . . . .	51
10	<b>Which Part of the Spectrum is Optimal for Perception of Skylight Polarization?</b> . . . . .	53
10.1	A Common Misbelief Concerning the Dependence of the Degree of Skylight Polarization on Wavelength . . . . .	53
10.2	Why do Many Insects Perceive Skylight Polarization in the UV? . . . . .	56
10.2.1	Is the Celestial Polarization Pattern More Stable in the UV? . . . . .	56
10.2.2	Was the UV Component of Skylight Stronger in the Past? . . . . .	57
10.2.3	Relatively Large Proportion of UV Radiation in Skylight? . . . . .	59
10.2.4	Mistaking Skylight for Ground-Reflected Light? . . . . .	60
10.2.5	Confusion of Motion and Form for Celestial Polarization? . . . . .	60
10.2.6	Were UV Receptors Originally Skylight Detectors and Only Later Incorporated Into the E-vector Detecting System? . . . . .	61
10.2.7	Maximizing “Signal-to-Noise Ratios” by UV Photopigments Under Low Degrees of Skylight Polarization? . . . . .	61
10.2.8	In the Spectral and Intensity Domain the Celestial Band of Maximum Polarization is Less Pronounced in the UV than in the Blue . . . . .	62

10.2.9	The Proportion of Celestial Polarization Pattern Useful for Animal Orientation is Higher in the Blue than in the Green or Red . . . . .	62
10.2.10	Perception of Skylight in the UV Maximizes the Extent of the Celestial Polarization Pattern Useful for Compass Orientation Under Cloudy Skies . . . . .	64
10.3	Resolution of the UV-Sky-Pol Paradox . . . . .	68
10.4	E-Vector Detection in the UV also Maximizes the Proportion of the Celestial Polarization Pattern Useful for Orientation Under Canopies . . . . .	69
10.5	Analogy Between Perception of Skylight Polarization and Polarotactic Water Detection Considering the Optimal Spectral Range . . . . .	71
10.6	Analogy of the UV-Sky-Pol Paradox in the Polarization Sensitivity of Aquatic Animals . . . . .	71
10.7	Why do Crickets Perceive Skylight Polarization in the Blue? . . . . .	72
10.8	Concluding Remark . . . . .	73
<b>11</b>	<b>Polarization of the Sky and the Solar Corona During Total Solar Eclipses . . . . .</b>	<b>74</b>
11.1	Structure of the Celestial Polarization Pattern and its Temporal Change During the Eclipse of 11 August 1999 .	75
11.2	Origin of the E-vector Pattern During Totality . . . . .	78
11.3	Neutral Points of Skylight Polarization Observed During Totality . . . . .	80
11.4	Origin of the Zenith Neutral Point During Totality . . . . .	83
11.5	Origin of Other Neutral Points at Totality . . . . .	83
11.6	Imaging Polarimetry of the Solar Corona . . . . .	85
<b>12</b>	<b>Reflection-Polarization Pattern of the Flat Water Surface Measured by 180° Field-of-View Imaging Polarimetry . . . . .</b>	<b>88</b>
<b>13</b>	<b>Polarization Pattern of a Fata Morgana: Why Aquatic Insects are not Attracted by Mirages? . . . . .</b>	<b>92</b>
<b>14</b>	<b>Polarizational Characteristics of the Underwater World . . . . .</b>	<b>95</b>
<b>15</b>	<b>Circularly Polarized Light in Nature . . . . .</b>	<b>100</b>
15.1	Circularly/Elliptically Polarized Light Induced by Total Reflection from the Water-Air Interface . . . . .	100
15.2	Circularly Polarized Light Reflected from the Exoskeleton of Certain Arthropods . . . . .	101
15.3	Circularly Polarized Light Emitted by Firefly Larvae . . . . .	102

**Part III: Polarized Light in Animal Vision**

<b>16</b>	<b>From Polarization Sensitivity to Polarization Vision . . . . .</b>	<b>107</b>
16.1	Forerunners of the Study of Animal Polarization Sensitivity . . . . .	107
16.2	Polarization Sensitivity, Polarization Vision and Analysis of Polarization Patterns . . . . .	108
16.3	Functional Similarities Between Polarization Vision and Colour Vision . . . . .	111
16.4	How can Skylight Polarization be Used for Orientation? . . . . .	112
16.5	Possible Functions of Polarization Sensitivity . . . . .	115
16.6	How might Polarization Sensitivity Have Evolved? . . . . .	116
16.7	Polarization Sensitivity of Rhabdomeric Invertebrate Photoreceptors . . . . .	117
16.7.1	Hypothetical Polarizing Ability of the Dioptric Apparatus . .	118
16.7.2	Rhabdomeric Polarization Sensitivity . . . . .	118
16.7.3	Origin of High Polarization Sensitivity . . . . .	121
16.7.4	Origin of Low Polarization Sensitivity . . . . .	122
16.7.5	Rhabdomeric Twist and Misalignment and their Functional Significance . . . . .	123
16.7.6	Ontogenetic Development of Photoreceptor Twist Outside the Dorsal Rim Area of the Insect Eye . . . . .	124
16.7.7	Characteristics of the Anatomically and Physiologically Specialized Polarization-Sensitive Dorsal Rim Area in Insect Eyes . . . . .	125
16.7.8	Polarization-Sensitive Interneurons in Invertebrates . . . . .	128
16.8	Polarization Sensitivity of Vertebrate Photoreceptors . . . . .	128
16.9	Polarization Sensitivity in Plants . . . . .	130
<b>17</b>	<b>Polarization Sensitivity in Terrestrial Insects . . . . .</b>	<b>131</b>
17.1	Honeybees . . . . .	131
17.2	Flies . . . . .	143
17.2.1	Muscid Flies . . . . .	143
17.2.2	Rhabdomeric Twist in the Retina of Flies . . . . .	143
17.2.3	<i>Musca domestica</i> , <i>Calliphora erythrocephala</i> , <i>Calliphora stygia</i> and <i>Phaenicia sericata</i> . . . . .	144
17.2.4	<i>Drosophila melanogaster</i> . . . . .	146
17.3	Ants . . . . .	147
17.4	Crickets . . . . .	156
17.4.1	<i>Acheta domesticus</i> . . . . .	156
17.4.2	<i>Gryllotalpa gryllotalpa</i> . . . . .	156
17.4.3	<i>Gryllus bimaculatus</i> . . . . .	157
17.4.4	<i>Gryllus campestris</i> . . . . .	160
17.5	Lepidoptera: Butterflies and Moths . . . . .	165

Contents	XIX
17.5.1 <i>Papilio xuthus</i> . . . . .	166
17.5.2      Polarization-Induced False Colours Perceived by <i>Papilio xuthus</i> and <i>Papilio aegeus</i> . . . . .	166
17.5.3      Polarized Light Reflected from Butterfly Wings as a Possible Mating Signal in <i>Heliconius cydno chioneus</i> . .	169
17.6      Locusts . . . . .	169
17.7      Cockroaches . . . . .	172
17.8      Scarab Beetles . . . . .	173
17.9      Response of Night-Flying Insects to Linearly Polarized Light	176
<b>18      Polarization Sensitivity in Insects Associated with Water . . . . .</b>	<b>178</b>
18.1 <i>Velia caprai</i> . . . . .	180
18.2 <i>Corixa punctata</i> . . . . .	180
18.3      Non-Biting Midges (Chironomidae) . . . . .	180
18.4      Waterstrider <i>Gerris lacustris</i> . . . . .	181
18.5      Backswimmer <i>Notonecta glauca</i> . . . . .	183
18.6      Dragonflies Odonata . . . . .	188
18.7      Dolichopodids . . . . .	191
18.8      Mayflies Ephemeroptera . . . . .	192
18.      Other Polarotactic Water Insects . . . . .	193
18.10      Insects Living on Moist Substrata or Dung . . . . .	195
18.11      Mosquitoes . . . . .	197
<b>19      Multiple-Choice Experiments on Dragonfly Polarotaxis . . . . .</b>	<b>199</b>
<b>20      How can Dragonflies Discern Bright and Dark Waters from a Distance? The Degree of Linear Polarization of Reflected Light as a Possible Cue for Dragonfly Habitat Selection . . . . .</b>	<b>206</b>
<b>21      Oil Reservoirs and Plastic Sheets as Polarizing Insect Traps . . . . .</b>	<b>215</b>
21.1      Oil Lakes in the Desert of Kuwait as Massive Insect Traps . .	215
21.2      The Waste Oil Reservoir in Budapest as a Disastrous Insect Trap for Half a Century . . . . .	219
21.2.1      Surface Characteristics of Waste Oil Reservoirs . . . . .	220
21.2.2      Insects Trapped by the Waste Oil . . . . .	221
21.2.3      Behaviour of Dragonflies Above Oil Surfaces . . . . .	222
21.3      Dual-Choice Field Experiments Using Huge Plastic Sheets .	223
21.4      The Possible Large-Scale Hazard of “Shiny Black Anthropogenic Products” for Aquatic Insects .	227

<b>22</b>	<b>Why do Mayflies Lay Eggs on Dry Asphalt Roads? Water-Imitating Horizontally Polarized Light Reflected from Asphalt Attracts Ephemeroptera . . . . .</b>	229
22.1	Swarming Behaviour of Mayflies above Asphalt Roads . . . . .	231
22.2	Multiple-Choice Experiments with Swarming Mayflies . . . . .	232
22.3	Reflection-Polarizational Characteristics of the Swarming Sites of Mayflies . . . . .	234
22.4	Mayflies Detect Water by Polarotaxis . . . . .	236
22.5	Comparison of the Attractiveness of Asphalt Roads and Water Surfaces to Mayflies . . . . .	239
<b>23</b>	<b>Reflection-Polarizational Characteristics of Car-Bodies: Why are Water-Seeking Insects Attracted to the Bodywork of Cars? . . . . .</b>	241
<b>24</b>	<b>Polarization Sensitivity in Spiders and Scorpions . . . . .</b>	243
24.1	Spiders . . . . .	243
24.2	Scorpions . . . . .	246
<b>25</b>	<b>Polarization Sensitivity in Crustaceans . . . . .</b>	247
25.	Mangrove Crab <i>Goniopsis cruentata</i> . . . . .	249
25.2	Fiddler Crabs . . . . .	249
25.3	Copepod <i>Cyclops vernalis</i> . . . . .	250
25.4	Larvae of the Crab <i>Rhithropanopeus harrisi</i> . . . . .	251
25.5	Larvae of the Mud Crab <i>Panopeus herbstii</i> . . . . .	252
25.6	Grapsid Crab <i>Leptograpsus variegatus</i> . . . . .	253
25.7	Crayfish . . . . .	253
25.8	Grass Shrimp <i>Palaemonetes vulgaris</i> . . . . .	255
25.9	Crab <i>Dotilla wickmanni</i> . . . . .	257
25.10	Water Flea <i>Daphnia</i> . . . . .	259
25.11	Mantis Shrimps . . . . .	263
<b>26</b>	<b>Polarization Sensitivity in Cephalopods and Marine Snails . . . . .</b>	267
26.1	Cephalopods . . . . .	267
26.1.1	Octopuses . . . . .	267
26.1.2	Squids . . . . .	269
26.1.3	European Cuttlefish <i>Sepia officinalis</i> . . . . .	272
26.2	Marine Snails . . . . .	274
<b>27</b>	<b>Polarization-Sensitive Optomotor Reaction in Invertebrates . . . . .</b>	276
27.1	Crabs . . . . .	276
27.2	Honeybees . . . . .	277
27.3	Flies . . . . .	277

27.4	Rose Chafers . . . . .	278
27.5	Optomotor Reaction to Over- and Underwater Brightness and Polarization Patterns in the Waterstrider <i>Gerris lacustris</i> . . . . .	278
27.6	Optomotor Response to Over- and Underwater Brightness and Polarization Patterns in the Backswimmer <i>Notonecta glauca</i> . . . . .	287
<b>28</b>	<b>Polarization Sensitivity in Fish . . . . .</b>	<b>293</b>
28.1	Fish in which Polarization-Sensitivity was Proposed . . . . .	294
28.1.1	Sockeye Salmon <i>Oncorhynchus nerka</i> . . . . .	294
28.1.2	Tropical Halfbeaks <i>Zenarchopterus dispar</i> and <i>Zenarchopterus buffoni</i> . . . . .	295
28.1.3	Halfbeak Fish <i>Dermogenys pusillus</i> . . . . .	296
28.1.4	Goldfish <i>Carassius auratus</i> . . . . .	297
28.1.5	African Cichlid <i>Pseudotropheus macropthalmus</i> . . . . .	299
28.1.6	Anchovies <i>Engraulis mordax</i> and <i>Anchoa mitchilli</i> . . . . .	300
28.1.7	Rainbow Trout <i>Oncorhyncus mykiss</i> . . . . .	301
28.1.8	Juvenile Salmonid Fish <i>Oncorhynchus mykiss</i> , <i>Oncorhynchus</i> , <i>Oncorhynchus nerka</i> and <i>Salvelinus fontinalis</i> . . . . .	306
28.2	Fish with Debated Polarization Sensitivity and Fish in which Polarization-Insensitivity was Proposed . . . . .	306
28.2.1	Green Sunfish <i>Lepomis cyanellus</i> . . . . .	306
28.2.2	Common White Sucker <i>Catostomus commersoni</i> . . . . .	308
28.2.3	Pacific Herring <i>Clupea harengus pallasi</i> . . . . .	308
28.3	Possible Biophysical Basis of Fish Polarization Sensitivity . . . . .	309
28.3.1	Axially Oriented Membrane Disks in the Photoreceptor Outer Segments as the Basis for Polarization Sensitivity in Anchovies . . . . .	309
28.3.2	Embryonic Fissures in Fish Eyes and their Possible Role in the Detection of Polarization . . . . .	311
28.3.3	Paired Cones as a Possible Basis for Polarization Sensitivity in Fish . . . . .	312
28.3.3.1	Orthogonal Double Cones with Graded Index of Refraction as a Possible Basis for Polarization Sensitivity in the Green Sunfish <i>Lepomis cyanellus</i> . . . . .	312
28.3.3.2	Proposed Basis for Polarization Sensitivity in Rainbow Trout due to Internal Reflection from the Membranous Partitions of Double Cones . . . . .	314
<b>29</b>	<b>Polarization Sensitivity in Amphibians . . . . .</b>	<b>317</b>
29.1	Tiger Salamander <i>Ambystoma tigrinum</i> . . . . .	318
29.2	Red-Spotted Newt <i>Notophthalmus viridescens</i> . . . . .	320

29.3	Larval Bullfrog <i>Rana catesbeiana</i> . . . . .	321
29.4	Proposed Mechanisms of Detection of Polarization in Amphibians . . . . .	322
<b>30</b>	<b>Polarization Sensitivity in Reptiles</b> . . . . .	324
30.1	Celestial Orientation in Reptiles and the Polarization-Sensitive Parietal Eye of Lizards . . . . .	324
30.2	Desert Lizard <i>Uma notata</i> . . . . .	325
30.3	Sleepy Lizard <i>Tiliqua rugosa</i> . . . . .	326
<b>31</b>	<b>Polarization Sensitivity in Birds</b> . . . . .	328
31.1	Crepuscularly and Nocturnally Migrating Birds . . . . .	330
31.1.1	White-Throated Sparrow <i>Zonotrichia albicollis</i> and American Tree row <i>Spizella arborea</i> . . . . .	330
31.1.2	Northern Waterthrush <i>Seiurus noveboracensis</i> and Kentucky Warbler <i>Oporornis formosus</i> . . . . .	331
31.1.3	Yellow-Rumped Warbler <i>Dendroica coronata</i> . . . . .	332
31.1.4	Blackcap <i>Sylvia atricapilla</i> . . . . .	334
31.1.5	Savannah Sparrow <i>Passerculus sandwichensis</i> . . . . .	335
31.2	Day-Migrating Birds . . . . .	340
31.3	Birds which Might be Polarization Insensitive or not Use Skylight Polarization in their Migratory Orientation . . . . .	341
31.3.1	Debated Polarization Sensitivity in the Homing Pigeon <i>Columba livia</i> . . . . .	342
31.3.1.1	The Position of the Sun Hidden by Clouds Could also be Determined on the Basis of the Colour Gradients of Skylight Under Partly Cloudy Conditions . . . . .	348
31.3.2	European robin <i>Erithacus rubecula</i> . . . . .	349
31.3.3	Pied Flycatcher <i>Ficedula hypoleuca</i> . . . . .	350
31.4	Proposed Mechanisms of Avian Polarization Sensitivity . . . . .	351
31.4.1	Is the Foveal Depression in the Avian Retina Responsible for Polarization Sensitivity? . . . . .	351
31.4.2	A Model of Polarization Detection in the Avian Retina with Oil Droplets . . . . .	353
<b>32</b>	<b>Human Polarization Sensitivity</b> . . . . .	355
32.1	Haidinger Brushes . . . . .	355
32.2	Boehm Brushes . . . . .	361
32.3	Shurcliff Brushes . . . . .	361
<b>33</b>	<b>Polarization-Induced False Colours</b> . . . . .	362
33.1	Polarization-Dependent Colour Sensitivity and Colour-Dependent Polarization Sensitivity . . . . .	362

<b>Contents</b>	<b>XXIII</b>
33.2 Polarizational False Colours Perceived by <i>Papilio</i> Butterflies	364
33.2.1 Computation of the Spectral Loci of Colours Perceived by a Polarization- and Colour-Sensitive Retina . . . . .	364
33.2.2 Polarization-Induced False Colours Perceived by a Weakly Polarization-Sensitive Retina . . . . .	369
33.2.3 Reflection-Polarizational Characteristics of Plant Surfaces .	374
33.2.4 Do Polarization-Induced False Colours Influence the Weakly Polarization-Sensitive Colour Vision of <i>Papilio</i> Butterflies Under Natural Conditions? . . . . .	376
33.3 Polarizational False Colours Perceived by a Highly Polarization-Sensitive Retina Rotating in Front of Flowers and Leaves . . . . .	377
33.4 Camouflage Breaking via Polarization-Induced False Colours and Reflection Polarization . . . . .	378
33.5 Is Colour Perception or Polarization Sensitivity the More Ancient? . . . . .	379
<b>34 A Common Methodological Error: Intensity Patterns Induced by Selective Reflection of Linearly Polarized Light from Black Surfaces . . . . .</b>	<b>381</b>
<b>Rerences . . . . .</b>	<b>385</b>
<b>Subject Index . . . . .</b>	<b>417</b>
<b>Colour Illustrations . . . . .</b>	<b>■ ■</b>
