

# Contents

<b>1. Classification of Composite Materials .....</b>	1
1.1 Definition and Characteristics .....	2
1.2 Significance and Objectives .....	7
1.3 Modelling .....	8
1.4 Material Characteristics of the Constituents .....	11
1.5 Advantages and Limitations .....	13
1.6 Problems .....	14
<b>2. Linear Anisotropic Materials .....</b>	15
2.1 Generalized Hooke's Law .....	16
2.1.1 Stresses, Strains, Stiffness, and Compliances .....	17
2.1.2 Transformation Rules.....	23
2.1.3 Symmetry Relations of Stiffness and Compliance Matrices .	27
2.1.4 Two-dimensional Material Equations.....	40
2.1.5 Curvilinear anisotropy .....	45
2.1.6 Problems .....	48
2.2 Fundamental Equations and Variational Solution Procedures .....	52
2.2.1 Boundary and Initial-Boundary Value Equations .....	53
2.2.2 Principle of Virtual Work and Energy Formulations.....	57
2.2.3 Variational Methods .....	62
2.2.4 Problems .....	68
<b>3. Effective Material Moduli for Composites .....</b>	77
3.1 Elementary Mixture Rules for Fibre-Reinforced Laminae .....	78
3.1.1 Effective Density .....	79
3.1.2 Effective Longitudinal Modulus of Elasticity .....	79
3.1.3 Effective Transverse Modulus of Elasticity .....	80
3.1.4 Effective Poisson's Ratio .....	81
3.1.5 Effective In-plane Shear Modulus .....	82
3.1.6 Discussion on the Elementary Mixture Rules .....	83
3.2 Improved Formulas for Effective Moduli of Composites .....	84
3.3 Problems .....	86

<b>4. Elastic Behavior of Laminate and Sandwich Composites . . . . .</b>	<b>91</b>
4.1 Elastic Behavior of Laminae . . . . .	91
4.1.1 On-axis Stiffness and Compliances of UD-Laminae . . . . .	92
4.1.2 Off-axis Stiffness and Compliances of UD-Laminae . . . . .	97
4.1.3 Stress Resultants and Stress Analysis . . . . .	106
4.1.4 Problems . . . . .	113
4.2 Elastic Behavior of Laminates . . . . .	119
4.2.1 General Laminates . . . . .	120
4.2.2 Stress-Strain Relations and Stress Resultants . . . . .	122
4.2.3 Laminates with Special Laminae Stacking Sequences . . . . .	129
4.2.4 Stress Analysis . . . . .	140
4.2.5 Thermal and Hygroscopic Effects . . . . .	143
4.2.6 Problems . . . . .	148
4.3 Elastic Behavior of Sandwiches . . . . .	153
4.3.1 General Assumptions . . . . .	154
4.3.2 Stress Resultants and Stress Analysis . . . . .	155
4.3.3 Sandwich Materials with Thick Cover Sheets . . . . .	157
4.4 Problems . . . . .	158
<b>5. Classical and Improved Theories . . . . .</b>	<b>161</b>
5.1 General Remarks . . . . .	161
5.2 Classical Laminate Theory . . . . .	165
5.3 Shear Deformation Theory for Laminates and Sandwiches . . . . .	171
5.4 Layerwise Theories . . . . .	176
5.5 Problems . . . . .	177
<b>6. Failure Mechanisms and Criteria . . . . .</b>	<b>183</b>
6.1 Fracture Modes of Laminae . . . . .	184
6.2 Failure Criteria . . . . .	188
6.3 Problems . . . . .	200
<b>7. Modelling and Analysis of Beams . . . . .</b>	<b>205</b>
7.1 Introduction . . . . .	205
7.2 Classical Beam Theory . . . . .	207
7.3 Shear Deformation Theory . . . . .	220
7.4 Sandwich Beams . . . . .	226
7.4.1 Stresses and Strains for symmetrical cross-sections . . . . .	227
7.4.2 Stresses and strains for non-symmetrical cross-sections . . . . .	231
7.4.3 Governing Sandwich beam equations . . . . .	232
7.5 Hygrothermo-Elastic Effects on Beams . . . . .	236
7.6 Analytical Solutions . . . . .	237
7.7 Problems . . . . .	239

<b>8. Modelling and Analysis of Plates .....</b>	251
8.1 Introduction .....	252
8.2 Classical Laminate Theory .....	252
8.3 Shear Deformation Theory .....	267
8.4 Sandwich Plates .....	273
8.5 Hygrothermo-Elastic Effects on Plates .....	275
8.6 Analytical Solutions .....	278
8.6.1 Classical Laminate Theory .....	278
8.6.2 Shear Deformation Laminate Theory .....	291
8.7 Problems .....	298
<b>9. Modelling and Analysis of Circular Cylindrical Shells .....</b>	315
9.1 Introduction .....	316
9.2 Classical Shell Theory .....	317
9.2.1 General Case .....	317
9.2.2 Specially Orthotropic Circular Cylindrical Shells Subjected by Axial Symmetric Loads .....	320
9.2.3 Membrane and Semi-membrane theories .....	324
9.3 Shear Deformation Theory .....	325
9.4 Sandwich Shells .....	333
9.5 Problems .....	334
<b>10. Modelling and Analysis of Thin-walled Folded Structures .....</b>	339
10.1 Introduction .....	340
10.2 Generalized Beam Models .....	343
10.2.1 Basic Assumptions .....	344
10.2.2 Potential Energy of the Folded Structure .....	346
10.2.3 Reduction of the Two-dimensional Problem .....	347
10.2.4 Simplified Structural Models .....	352
10.2.5 An Efficient Structure Model for the Analysis of General Prismatic beam Shaped Thin-walled Plate Structures .....	358
10.2.6 Free Eigen-vibration Analysis, Structure model A .....	359
10.3 Solution Procedures .....	361
10.3.1 Analytical Solutions .....	362
10.3.2 Transfer Matrix Method .....	363
10.4 Problems .....	369
<b>11. Finite Element Analysis .....</b>	377
11.1 Introduction .....	378
11.1.1 FEM Procedure .....	378
11.1.2 Problems .....	381
11.2 Finite Beam Elements .....	383
11.2.1 Laminate Truss Elements .....	383
11.2.2 Laminate Beam Elements .....	385
11.2.3 Problems .....	391

11.3 Finite Plate Elements .....	393
11.3.1 Classical Laminate Theory .....	397
11.3.2 Shear Deformation Theory .....	399
11.4 Generalized Finite Beam Elements .....	404
11.4.1 Foundations .....	405
11.4.2 Element Definitions .....	405
11.4.3 Element Equations .....	407
11.4.4 System Equations and Solution .....	411
11.4.5 Equations for the Free Vibration Analysis .....	412
11.5 Numerical Results .....	413
11.5.1 Laminate Shell Elements in the Program System COS-MOS/M .....	413
11.5.2 Examples for the use of Laminated Shell Elements .....	417
11.5.3 Examples of the use of Generalized beam Elements .....	431
<b>A. Matrix Operations .....</b>	<b>435</b>
A.1 Definitions .....	435
A.2 Special Matrices .....	436
A.3 Matrix Algebra and Analysis .....	437
<b>B. Stress and strain transformations .....</b>	<b>441</b>
<b>C. Differential Operators for Rectangular Plates (Classical Plate Theory)</b>	<b>443</b>
<b>D. Differential Operators for Rectangular Plates (Shear Deformation Theory).....</b>	<b>445</b>
<b>E. Differential Operators for Circular Cylindrical shells (Classical Shell Theory).....</b>	<b>447</b>
<b>F. Differential Operators for Circular Cylindrical Shells (Shear Deformation Theory) .....</b>	<b>449</b>
<b>G. Solution Forms of the Differential Equation <math>w'''' - k_1^2 w'' + k_2^4 w = 0</math></b>	<b>451</b>
<b>H. Material's properties .....</b>	<b>453</b>
<b>I. References .....</b>	<b>459</b>
I.1 Selected Textbooks and Monographs on Composite Mechanics .....	459
I.2 Supplementary Literature for Further Reading .....	462
I.3 Selected Review Articles .....	463
<b>Index .....</b>	<b>465</b>
