1. Covering of Discrete Quasiperiodic Sets: Concepts and Theory

<i>Peter Kramer</i>	1
1.1 Packing, Tiling, and Covering	1
1.2 Aperiodic and Quasiperiodic Systems with Long-Range Order	6
1.3 The Quasiperiodic Fibonacci Tiling and its Covering by Delone Clusters	8
1.3.1 Fibonacci Tiling and Klotz Construction	8
1.3.2 Alternative Fundamental Domains	9
1.3.3 Quasiperiodic functions on a parallel line section of E^2	9
1.3.4 Fundamental Domain Compatible with a Tiling	10
1.3.5 Linked Delone Clusters	11
1.3.6 Delone Covering of the Fibonacci Tiling	11
1.4 Decagonal Voronoi Clusters and Covering of the Penrose Tiling	11
1.5 Coverings of Aperiodic and Quasiperiodic Sets	14
1.5.1 Covering and Cluster Density in 2D Systems	14
1.5.2 Shelling of Quasicrystals	15
1.5.3 Covering of Atomic Positions in Icosahedral Quasicrystals	15
1.5.4 Fundamental Domains and Unit Cells for Quasiperiodic Tilings	16
1.5.5 Clusters in Quasicrystals	16
1.5.6 Surfaces of Quasicrystals	17
1.6 Perspectives on the Theory of Covering for Discrete Quasiperiodic Sets	17
References	18

2. Covering Clusters in Icosahedral Quasicrystals

<i>Michel Duneau and Denis Gratias</i>	23
2.1 Introduction	23
2.2 Bergman and Mackay Clusters	25

2.3 The Al–Cu–Fe/Al–Pd–Mn Models	26
2.4 Local Environments	32
2.4.1 Computation of Environments	33
2.4.2 Atomic Clusters	37
2.4.3 B and B' Clusters	38
2.4.4 M and M' Clusters	41
2.5 Atomic Clusters and Chemical Decoration of i -AlPdMn	46
2.6 Covering Clusters: the XB Cluster	51
2.7 Conclusion	60
References	60

3. Generation of Quasiperiodic Order by Maximal Cluster Covering

Franz Gähler, Petra Gummelt and Shelomo I. Ben-Abraham 63

3.1 Introduction	63
3.2 Important Concepts and Tools	67
3.3 Penrose and Related Tilings	68
3.3.1 Perfect Decagon Coverings	68
3.3.2 Random Decagon Coverings	71
3.3.3 Cluster Density Maximization	73
3.3.4 Entropy Density	75
3.3.5 Couplings Between Clusters	76
3.3.6 An Atomic Cluster Enforcing the Relaxed Overlap Rules	78
3.4 Octagonal Ammann–Beenker Tilings	79
3.4.1 The Alternation Condition	79
3.4.2 An Atomic Model for Octagonal Mn–Si–Al	83
3.5 Dodecagonal Socolar and Shield Tilings	84
3.5.1 The Socolar Tiling	84
3.5.2 Cluster Covering and Cluster Densities	87
3.5.3 The Shield Tiling	88
3.6 Voronoi and Delone Clusters	91
References	93

4. Voronoi and Delone Clusters in Dual Quasiperiodic Tilings

Peter Kramer 97

4.1 Introduction	97
4.1.1 Lattices in E^n , Cells, Sections and Quasiperiodic Functions	98
4.1.2 Dual Quasiperiodic Canonical Tilings and Windows	99
4.1.3 Fundamental Domains and Coverings for Quasiperiodic Tilings	99
4.1.4 Voronoi and Delone Clusters: Theory and General Results	100
4.1.5 Voronoi and Delone Clusters in 2D Quasiperiodic Tilings	100
4.1.6 V- and D-clusters in Dual Canonical Icosahedral Tilings	101

4.2 Voronoi and Delone Polytopes and Dual Boundaries 102

4.3 Dual Tilings and Their Windows103

4.4 Fundamental Domains and Spaces of Functions 104

4.5 Delone Clusters and Their Windows 106

4.6 Covering by Delone Clusters 108

4.7 The Lattice A_4 and the Triangle Tiling 109

4.8 Delone Clusters in the Triangle Tiling112

 4.8.1 Standard Positions of Dual 2-Boundaries 112

 4.8.2 Delone Clusters $D_{\parallel}^{(a,j)}$ and Their Windows 113

 4.8.3 Delone Clusters $D_{\parallel}^{(b,j)}$ and their Windows 117

4.9 Delone Covering of the Triangle Tiling 121

 4.9.1 Covering of Vertices and Tiles 121

 4.9.2 Thickness of the Covering 122

4.10 Fundamental Domains in the Triangle Tiling124

4.11 Linkage of Delone Clusters in (\mathcal{T}^*, A_4) 125

4.12 6D Lattices and the Icosahedral Coxeter Group 130

 4.12.1 Lattices D_6, P and Their Holes 131

 4.12.2 Point Groups and Icosahedral Symmetry 133

 4.12.3 Scaling Symmetry in Icosahedral Lattices137

4.13 The Icosahedral Tiling (\mathcal{T}^*, D_6) 140

4.14 The Icosahedral Tiling (\mathcal{T}^*, P) 143

4.15 Filling of Delone Clusters in (\mathcal{T}^*, D_6) 144

 4.15.1 The Window and Filling for D_{\parallel}^a 146

 4.15.2 The Window and Filling for D_{\parallel}^c 147

 4.15.3 The Window and Filling for D_{\parallel}^b 147

 4.15.4 Details of the Filling of Delone Clusters 148

4.16 Delone Clusters in the Icosahedral Tiling (\mathcal{T}^*, D_6) 152

4.17 Delone Clusters in the Tiling (\mathcal{T}^*, P) 154

4.18 Volume Composition of Delone Clusters in (\mathcal{T}^*, D_6) 157

4.19 Fundamental Domains and Icosahedral Tilings 157

 4.19.1 Tiling (\mathcal{T}, P) 159

 4.19.2 Tiling (\mathcal{T}^*, D_6) 159

4.20 Covering by Icosahedral Delone Clusters 160

 4.20.1 Tiling (\mathcal{T}^*, D_6) 160

 4.20.2 Tiling (\mathcal{T}^*, P) 161

4.21 Towards Complete Covering: Coloring 161

4.22 Conclusion 162

References163

5. The Efficiency of Delone Coverings of the Canonical Tilings $\mathcal{T}^{*(A_4)}$ and $\mathcal{T}^{*(D_6)}$
Zorka Papadopolos and Gerald Kasner165

5.1 Introduction165

5.2 Local Derivations of Tilings and Coverings
 Containing Pentagonal Prototiles from the Tiling $\mathcal{T}^{*(A_4)}$ 166

5.2.1 Local Derivation of the Tiling $\mathcal{T}^{*(z)}: \mathcal{T}^{*(A_4)} \longrightarrow \mathcal{T}^{*(z)}$ 167

5.2.2 Local Derivation of the Covering $\mathcal{C}_{\mathcal{T}^{*(A_4)}}^k: \mathcal{T}^{*(z)} \longrightarrow \mathcal{C}_{\mathcal{T}^{*(A_4)}}^k$ 169

5.2.3 Local Derivation of the Partly Random Penrose Tiling
 $\mathcal{T}^{*(p1)_r}: \mathcal{T}^{*(z)} \longrightarrow \mathcal{T}^{*(p1)_r}$ 171

5.2.4 Local Derivation of the Partly Random Niizeki Tiling
 $\mathcal{T}^{*(n_r)}: \mathcal{T}^{*(z)} \longrightarrow \mathcal{T}^{*(n_r)}$ 172

5.3 Delone Clusters of the Icosahedral Tiling $\mathcal{T}^{*(D_6)}$
 and Their Codings 174

5.3.1 Delone Clusters of the Canonical Tiling $\mathcal{T}^{*(L)}$
 and Their Codings 177

5.3.2 Delone Covering $\mathcal{C}_{\mathcal{T}^{*(D_6)}}$ of the Tiling $\mathcal{T}^{*(D_6)}$ 177

5.3.3 Decking Fractions, Thickness of the Covering $\mathcal{C}_{\mathcal{T}^{*(D_6)}}$ 180

5.4 Conclusion and Perspectives182
