Fast Switching of Mesoscopic Magnets

Thomas Schrefl, Josef Fidler, Rok Dittrich, Dieter Suess,

Werner Scholz, Vassilios Tsiantos, and Hermann Forster 1

1. Introduction	2
2. The Equation of Motion	3
3. Small Magnetic Particles	5
4. Finite-Element Micromagnetics	9
5. Magnetization Reversal in Thin-Film Co Elements	10
5.1. Polycrystalline Co Elements	11
5.2. Switching in a Rotational Field	17
6. Switching of Perpendicular Discrete Media	18
7. Effects of Nonzero Temperature	20
7.1. Langevin Micromagnetics	21
7.2. Switching Dynamics at Nonzero Temperature	22
8. Summary	24
References	24

Spin Damping in Ultrathin Magnetic Films

Douglas L. Mills and Sergio M. Rezende 27

1. Introduction	27
2. Ferromagnetic Resonance in Ultrathin Ferromagnetic Films. Phenomenology	29
2.1. The Landau–Lifshitz Equation and the Ferromagnetic Resonance Response of Ultrathin Ferromagnetic Films Frequency Dependence of Line Width in FMR and BLS	29
2.2. Comments on Extensions of Landau–Lifshitz Phenomenology ...	33
2.3. Brief Comments on Experimental Data	35
3. Extrinsic Contributions to the Line Width: The Two-Magnon Mechanism	36
3.1. Historical Comments	37
3.2. The Nature of Spin Waves in Ultrathin Ferromagnetic Films	40
3.3. Two-Magnon Scattering and the FMR Response of Ultrathin Ferromagnetic Films	44

4. Experimental Evidence for the Role of Two Magnon-Processes
in the Microwave Response of Ultrathin Ferromagnets 49

5. Concluding Remarks 54

**Magnetization Dynamics Investigated
by Time-Resolved Kerr Effect Magnetometry**

Jürgen Fassbender 59

1. Introduction 59

2. Numerical Simulations of Magnetization Dynamics
within the Stoner Model 60

 2.1. Model 61

 2.2. Magnetization Dynamics in Static Magnetic Fields 62

 2.3. Magnetization Dynamics in Pulsed Magnetic Fields 64

3. Time-Resolved Kerr Magnetometer Setup 75

4. Magnetization Dynamics in Ferrite Films 77

 4.1. Control of Magnetization Dynamics 77

 4.2. Spin-Wave Propagation 82

 4.3. Calculation of the Magneto-Optic Response 86

5. Conclusion 88

References 89

Index 95

**High Speed Switching and Rotational Dynamics
in Small Magnetic Thin Film Devices**

Stephen E. Russek, Robert D. McMichael, Michael J. Donahue,
and Shehzaad Kaka 93

1. Introduction to High-Speed Magnetic Devices 93

 1.1. Background 94

 1.2. Magnetic Devices 95

 1.3. Single-Domain Modeling 101

2. Micromagnetic Simulations of High-Speed Device Dynamics 109

 2.1. NIST Object Oriented MicroMagnetic Framework (OOMMF) .. 110

 2.2. Standard Micromagnetic Problems 111

 2.3. Modeling of Magnetic Rotation and Switching 114

 2.4. Modeling of Devices Based on Domain-Wall Motion 118

3. High-Frequency Magnetic Device Measurement 119

4. Rotation and Ferromagnetic Resonance in GMR Devices 126

5. Switching of Small GMR Devices 130

6. Effects of Disorder and Thermal Fluctuations 140

 6.1. Effects of Disorder 140

 6.2. Effects of Thermal Fluctuations 143

7. Engineering High-Frequency Dynamic Properties 146
