

# Table of contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>New ways for the effective factory</b> .....                 | <b>1</b>  |
| 1.1      | Requirements for tomorrow's manufacturing.....                  | 1         |
| 1.2      | Production structures .....                                     | 4         |
| 1.2.1    | Orientation towards metrics .....                               | 4         |
| 1.2.2    | Control methods .....   | 5         |
| 1.2.3    | Combinations of production structure<br>and control method..... | 7         |
| 1.2.4    | Weaknesses in traditional PPS systems.....                      | 7         |
| 1.2.5    | Function levels .....   | 8         |
| 1.2.6    | Types of production .....                                       | 10        |
| 1.3      | Classic IT support in production .....                          | 11        |
| 1.4      | Manufacturing Execution Systems (MES) .....                     | 13        |
| 1.4.1    | Emergence of the MES concept .....                              | 13        |
| 1.4.2    | Current standards .....   | 17        |
| 1.4.3    | The ideal MES.....  | 23        |
| 1.4.4    | Technical requirements .....                                    | 27        |
| 1.5      | Vertical and horizontal integration .....                       | 29        |
| 1.6      | Use of an MES system in the company .....                       | 34        |
| 1.6.1    | Organizational requirements .....                               | 34        |
| 1.6.2    | Technical requirements .....                                    | 34        |
| 1.6.3    | Economic efficiency.....  | 34        |
| 1.6.4    | Support for CIP and current certifications .....                | 35        |
| 1.6.5    | Definition and tracking of objectives .....                     | 36        |
| 1.7      | Practical examples of potential benefits .....                  | 37        |
| <b>2</b> | <b>MES for process capability</b> .....                         | <b>41</b> |
| 2.1      | Economic efficiency as a process property.....                  | 41        |
| 2.1.1    | The process-oriented approach<br>of ISO 9001/TS 16949 .....     | 42        |
| 2.1.2    | The process potential in figures .....                          | 43        |
| 2.2      | The process capability of the organization .....                | 44        |
| 2.2.1    | Identification of systematic errors .....                       | 45        |
| 2.2.2    | Systematic failure processing.....                              | 46        |
| 2.2.3    | Tracking corrective action.....                                 | 47        |

---

|          |   |           |
|----------|---|-----------|
| 2.3      | Process capability in collaboration.....                | 48        |
| 2.3.1    | Wasted work .....                                       | 48        |
| 2.3.2    | Operational target agreements .....                     | 50        |
| 2.4      | Process capability of information flows .....           | 50        |
| 2.4.1    | The company as a paper factory .....                    | 51        |
| 2.4.2    | Interfaces without value generation .....               | 51        |
| 2.4.3    | The way to paperless production .....                   | 52        |
| 2.5      | The process capability of flow control .....            | 54        |
| 2.5.1    | Deterministic control.....                              | 54        |
| 2.5.2    | Control with feedback (closed-loop control) .....       | 55        |
| 2.6      | Summary .....   | 58        |
|          | Literature .....  | 60        |
| <b>3</b> | <b>Added value from software.....</b>                   | <b>61</b> |
| 3.1      | The company as information system .....                 | 61        |
| 3.1.1    | Information as a production factor.....                 | 61        |
| 3.1.2    | Re-engineering and integration.....                     | 62        |
| 3.1.3    | Information processing in production.....               | 63        |
| 3.1.4    | Machines as information-processing systems.....         | 64        |
| 3.2      | MES in the capital goods industry .....                 | 65        |
| 3.2.1    | Characteristics of the capital goods industry .....     | 65        |
| 3.2.2    | MES in the IT software landscape .....                  | 66        |
| 3.2.3    | MES in the technology life cycle.....                   | 67        |
| 3.2.4    | MES as seen by the user .....                           | 69        |
| 3.2.5    | MES as seen by the market.....                          | 70        |
| 3.3      | Preparations for MES-implementation.....                | 71        |
| 3.3.1    | Identification of objectives .....                      | 72        |
| 3.3.2    | Systematic process development.....                     | 72        |
| 3.3.3    | Estimation of a return on investment .....              | 73        |
| 3.3.4    | System tuning.....                                      | 74        |
| 3.3.5    | Introduction of MES in the company.....                 | 75        |
| 3.3.6    | Operation of the MES solution .....                     | 76        |
| 3.4      | Innovative technologies in the MES environment .....    | 76        |
| 3.4.1    | The digitized factory .....                             | 76        |
| 3.4.2    | The digital factory.....                                | 77        |
| 3.4.3    | The factory with real-time capability .....             | 78        |
| <b>4</b> | <b>MES: the new class of IT applications.....</b>       | <b>81</b> |
| 4.1      | Introduction and motivation .....                       | 81        |
| 4.2      | The current situation in the manufacturing company..... | 82        |
| 4.2.1    | Tools and systems for the operative level.....          | 82        |
| 4.2.2    | Manual information procurement and other tools.....     | 84        |
| 4.2.3    | Problems in bringing together the data .....            | 86        |
| 4.3      | The situation as it ought to be .....                   | 86        |
| 4.3.1    | Gapless automated data acquisition .....                | 87        |
| 4.3.2    | The information point for production .....              | 88        |

|          |   |            |
|----------|---|------------|
| 4.3.3    | The concept of the “manufacturing cockpit” .....                      | 89         |
| 4.3.4    | Escalation management and workflow.....                               | 95         |
| 4.4      | Outlook and further development of MES systems.....                   | 97         |
|          | Literature.....   | 98         |
| <b>5</b> | <b>Building an MES system .....</b>                                   | <b>99</b>  |
| 5.1      | Software architecture of an MES system.....                           | 100        |
| 5.1.1    | Basic functions .....   | 101        |
| 5.1.2    | Data layer .....  | 103        |
| 5.1.3    | Application layer: business objects and methods.....                  | 104        |
| 5.1.4    | Process mapping.....  | 105        |
| 5.1.5    | The advantages of ESA architecture<br>for MES systems .....           | 106        |
| 5.2      | Interfaces of an MES system .....                                     | 107        |
| 5.2.1    | Interfaces with higher-level systems .....                            | 108        |
| 5.2.2    | Interfaces for horizontal integration.....                            | 111        |
| 5.2.3    | Interfaces with production facilities.....                            | 111        |
| 5.3      | User interfaces of an MES system.....                                 | 114        |
| 5.3.1    | Technologies for user interfaces .....                                | 114        |
| 5.3.2    | User interfaces for configuration, monitoring<br>and reporting .....  | 115        |
| 5.3.3    | User interfaces for data collection.....                              | 116        |
| 5.4      | Outlook.....  | 117        |
| <b>6</b> | <b>Integrated production management with MES.....</b>                 | <b>119</b> |
| 6.1      | MES systems make production management possible .....                 | 119        |
| 6.2      | The MES model.....  | 119        |
| 6.3      | Data analysis: information in an MES system.....                      | 121        |
| 6.4      | Operating resources: machine or installation section .....            | 122        |
| 6.4.1    | Order/operation .....   | 123        |
| 6.4.2    | Material .....  | 123        |
| 6.4.3    | Resources and production tools .....                                  | 124        |
| 6.4.4    | Process values .....  | 124        |
| 6.4.5    | Personnel .....   | 125        |
| 6.4.6    | Inspection and testing characteristic.....                            | 125        |
| 6.5      | MES data acquisition functionality .....                              | 126        |
| 6.5.1    | Data acquisition terminal equipment.....                              | 127        |
| 6.5.2    | Information for the worker.....                                       | 129        |
| 6.5.3    | Modularity supports the diversity of data<br>acquisition dialogs..... | 131        |
| 6.5.4    | Plausibility in the data acquisition process.....                     | 132        |
| 6.5.5    | Which interfaces with the process are best used? .....                | 133        |
| 6.5.6    | Data correction in the MES system.....                                | 134        |
| 6.5.7    | Availability and reliability of the MES system .....                  | 134        |

|          |   |            |
|----------|---|------------|
| 6.6      | MES information for production management.....                              | 135        |
| 6.6.1    | Transparency due to MES actuality .....                                     | 136        |
| 6.6.2    | User-focused analyses.....  | 137        |
| 6.6.3    | Production-related target definition .....                                  | 138        |
|          | Literature .....  | 139        |
| <b>7</b> | <b>Detailed planning and control with MES .....</b>                         | <b>141</b> |
| 7.1      | Overview and goals.....   | 141        |
| 7.1.1    | Incorporation of detailed planning and control.....                         | 141        |
| 7.1.2    | Tasks of detailed planning and control.....                                 | 143        |
| 7.2      | Use of MES for detailed planning and control.....                           | 144        |
| 7.2.1    | Overview.....   | 144        |
| 7.2.2    | Dealing with primary capacities in MES .....                                | 146        |
| 7.2.3    | Modeling the processes in the MES.....                                      | 149        |
| 7.2.4    | Personnel: the especially valuable resource.....                            | 152        |
| 7.2.5    | Modeling technological aspects.....   | 152        |
| 7.2.6    | Strategies for resource allocation.....                                     | 154        |
| 7.2.7    | Conflict resolution by simulation and optimization.....                     | 156        |
| 7.2.8    | Monitoring order execution .....  | 160        |
| 7.2.9    | Reactive planning with MES .....  | 161        |
| 7.3      | Management of the means of production (resources) .....                     | 162        |
| 7.3.1    | Status management .....   | 164        |
| 7.3.2    | Anonymous and individualized resources .....                                | 165        |
| 7.4      | Summary .....   | 166        |
| <b>8</b> | <b>Quality assurance with MES .....</b>                                     | <b>169</b> |
| 8.1      | Quality in practice .....   | 169        |
| 8.2      | Planned quality .....   | 170        |
| 8.2.1    | Quality master data in an MES .....   | 171        |
| 8.2.2    | Proactive defect prevention with FMEA .....                                 | 172        |
| 8.2.3    | Inspection and testing planning: the foundations<br>of product quality..... | 172        |
| 8.2.4    | Inspection equipment: reducing measurement<br>uncertainties .....           | 175        |
| 8.2.5    | Supplier rating: optimizing the procurement process .....                   | 176        |
| 8.2.6    | Setting up workflows with escalation scenarios .....                        | 177        |
| 8.2.7    | Quality planning within production preparation.....                         | 178        |
| 8.3      | Integrated quality.....   | 180        |
| 8.3.1    | Quality via information management.....                                     | 181        |
| 8.3.2    | Securing supplier quality .....   | 181        |
| 8.3.3    | In-process quality assurance .....  | 182        |
| 8.3.4    | Optimization of inspection equipment monitoring .....                       | 183        |
| 8.3.5    | Transparent complaints management.....                                      | 184        |

|           |   |            |
|-----------|---|------------|
| 8.4       | Documented quality.....   | 185        |
| 8.4.1     | Networking of information .....                                 | 186        |
| 8.4.2     | Using quality data appropriately .....                          | 187        |
| 8.4.3     | Traceability .....  | 190        |
| 8.5       | Analyzed and evaluated quality.....                             | 192        |
| 8.5.1     | Potential for improvement in production .....                   | 193        |
| 8.5.2     | Learning from complaints .....                                  | 194        |
| 8.5.3     | Six Sigma: putting a stop to waste .....                        | 195        |
| 8.5.4     | Quality information: added value in the MES.....                | 196        |
| <b>9</b>  | <b>Personnel management with MES .....</b>                      | <b>199</b> |
| 9.1       | Overview .....  | 199        |
