

# Table of Contents

1	Introduction .....	1
2	Global Framework .....	7
2.1	Wealth Distribution and Use Productivity .....	7
2.2	Education by Projects .....	11
2.3	Processes and Products .....	14
2.4	Sustainable Recycling of End-of-Life Vehicle in China .....	17
2.4.1	Recycling Industry .....	18
2.4.2	Remanufacturing Activities .....	22
2.4.3	Challenges .....	28
3	Life Cycle Engineering and Management .....	31
3.1	Status and Perspectives .....	31
3.1.1	History .....	33
3.1.2	Methodology .....	35
3.1.3	Economic and Social Aspects .....	42
3.1.4	Data and Tools .....	44
3.1.5	Integrated Product Policy .....	45
3.1.6	Eco-Efficiency of Industrial Activities .....	49
3.1.7	Conclusion .....	58
3.2	Saving Resources by Reuse, Recycling, Recovery .....	68
3.2.1	Environmental Evaluation .....	68
3.2.2	Application .....	73
3.2.3	Conclusion .....	75
3.3	Minimizing the Overall Environmental Impact .....	78
3.3.1	Life Cycle Approach .....	79
3.3.2	Modular Life Cycle Assessment .....	82
3.3.3	Conclusion .....	87
3.4	Assessment of Recyclability .....	90
3.4.1	Process Steps for Closed-loop Material Flows .....	90
3.4.2	Recyclability of a Product .....	92
3.4.3	Approach .....	94
3.4.4	Integration of Product Assessment .....	100

3.5	Efficient Economic Organization .....	104
3.5.1	Basic Issues for an Efficient Closed-Loop-Economy .....	105
3.5.2	Practical Implementation of Take-Back Schemes .....	118
3.5.3	Conclusion .....	125
3.6	Reverse Logistics .....	130
3.6.1	Redistribution Processes .....	132
3.6.2	Cycle Economy and Disassembly.....	134
3.6.3	Network of Disassembly Factories in Europe .....	136
3.6.4	Conclusion .....	141
4	Product Development .....	143
4.1	Design Guidelines .....	143
4.1.1	Redesign of a Washing Machine Solenoid Valve .....	146
4.1.2	IT-based Design Support.....	148
4.1.3	Feedback of Design-relevant Information .....	151
4.2	Connections.....	156
4.2.1	Disconnecting-Supporting Connections .....	156
4.2.2	Parameters Determining (Dis)connecting.....	159
4.2.3	Classification Scheme of Connection Principles .....	162
4.2.4	Systematic Design of Connections .....	167
4.2.5	Conclusion .....	168
4.3	Simulation Tools for Disassembly Design .....	170
4.3.1	Product Condition Model.....	171
4.3.2	Virtual Disassembly .....	175
4.3.3	Enhancement of Service and Disposal.....	177
4.4	Product Life Cycle Planning and Tracking .....	183
4.4.1	Information Technological Infrastructure .....	184
4.4.2	Implementation .....	186
4.4.3	Knowledge as a Process Driver .....	190
4.5	Reference Model for Managing Product Development .....	193
4.5.1	Sustainability.....	193
4.5.2	Modeling.....	196
4.5.3	Generic Model .....	199
4.5.4	Open Knowledge Support to Small Enterprises .....	205
4.6	Cleaner Production.....	207
4.6.1	Methodology .....	208
4.6.2	Industrial Cases.....	211
4.6.3	Trends.....	214

---

5	Processes and Tools for Disassembly .....	217
5.1	Non-Detachable Connections.....	217
5.1.1	Drilling.....	219
5.1.2	Shearing and Splitting.....	221
5.1.3	Jet Techniques .....	223
5.1.4	Cryotechnical Hybrid Tools .....	231
5.1.5	Inductive Heating and Thermal Removal .....	233
5.2	Detachable Connections.....	237
5.2.1	Working Principles.....	238
5.2.2	Disassembly Tool Kit.....	249
5.3	Clamping Systems .....	254
5.3.1	Dodekapod – Parallel Kinematic with 12 Axes .....	256
5.3.2	Deployment of Parallel Structured Clamping Systems ..	263
5.4	Cleaning Technologies .....	268
5.4.1	Challenges.....	268
5.4.2	Blasting .....	270
5.4.3	Brushing.....	283
5.4.4	Flexible Cleaning Centre .....	283
5.4.5	Laser Assisted Dry Ice Blasting.....	286
5.5	Hybrid Disassembly System .....	290
5.5.1	Requirements .....	290
5.5.2	Layout Variants .....	291
5.5.3	Equipment and Facilities.....	294
5.5.4	Unscrewing Process .....	296
5.5.5	Adaptation to Different Products .....	301
5.5.6	Information and Control .....	307
5.5.7	Conclusion .....	311
6	Planning for Remanufacturing and Recycling .....	313
6.1	Facility Planning .....	313
6.1.1	Product and Process Analysis .....	315
6.1.2	Product Classification .....	319
6.1.3	Dimensioning.....	321
6.1.4	Structuring.....	325
6.1.5	Modelling and Simulation.....	327
6.1.6	Conclusion .....	329
6.2	Program Planning.....	331
6.2.1	Optimisation Model.....	331

6.2.2	Flat Screen Monitor Remanufacturing .....	332
6.2.3	Model Implementation and Application .....	337
6.2.4	Conclusion .....	340
7	Enabling for Sustainability in Engineering .....	343
7.1	Maintenance Essential for Life Cycle Management .....	344
7.1.1	Life Cycle Perspective .....	345
7.1.2	Framework .....	347
7.1.3	Information Loop .....	350
7.1.4	Conclusion .....	352
7.2	Intelligent Maintenance Systems .....	354
7.2.1	Watchdog Agent <sup>®</sup> Technique .....	357
7.2.2	Responsive Maintenance .....	360
7.2.3	Hierarchical Architecture .....	362
7.3	Life Cycle Unit – Concept and Application .....	366
7.3.1	Architecture and Implementation .....	369
7.3.2	Integration in Different Products .....	373
7.3.3	Conclusion .....	377
7.4	Miniaturized Life Cycle Units .....	379
7.4.1	Sustainment of Microsystems .....	379
7.4.2	Modular Microsystems .....	380
7.4.3	The eGrain Concept .....	383
7.4.4	Monitoring Electronic Assemblies.....	385
7.5	Modularity for Ease of Remanufacturing .....	390
7.5.1	Remanufacturing.....	391
7.5.2	Modularity.....	393
7.5.3	Module Configurator.....	396
7.5.4	Case Study – Modular Mobile Phone Kit.....	408
7.6	Competence Management in Education for Sustainability .....	413
7.6.1	Competence Market Chain .....	414
7.6.2	Outcome Orientation.....	415
7.6.3	Reference Model.....	416
7.6.4	Conclusion .....	417
8	Roadmap.....	419
